PART I SYSTEMS THINKING

2 Systems Thinking **19**
Patrick }. Driscoli

2.1 Introduction 19
2.2 Structure 23
2.3 Classification . * I- «• .#* # *«r,-. 24
2.4 Boundaries *r.»t*J3%* 26
2.5 Visibility 29
2.6 IDEFtf. Models 35
2.7 Mathematical Structure 38
2.8 Spatial Arrangement ^ 44
2.9 Evolution 47
2.10 Summary . ^ 48
2.11 Exercises - * 49
References **52**

System Life Cycle **55**
Patrick). Driscoll

3.1 Introduction Siio/.";55
3.2 System Life Cycle Model 58
3.2.1 Establish System Need ' :'*:' 58
3.2.2 Develop System Concept >i.i;}b»l*rt[1] 60
3.2.3 Design and Develop System 60
3.2.4 Produce System 61
3.2.5 Deploy System Wn-.m^H-j^H. *'61*
3.2.6 Operate System 62
3.2.7 Retire System " '63
3.3 Other Major System Life Cycle Models **ttotouboiln'** ^
3.4 Risk Analysis in the System Life Cycle V.w.sft £ -*v*^-, ^
3.4.1 Risk Assessment in the System Life Cycle 69
3.4.2 Prioritizing Risks for Risk Management ^yrp.i i *j^*
3.5 Summary (\ '" *e* 75

Systems Modeling and Analysis i **79**
Paul D. West, John E. Kobza, and Simon R. Goerger , ' ' _ ' _

4.1 Introduction : '• • • : , • , 79
4.2 Developing System Measures ' 80
4.3 Modeling the System Design -• - 82
4.3.1 What Models Are 83
4.3.2 Why We Use Models 83

4.3.3 Role of Models in Solution Design 85
4.3.4 Qualities of Useful Models 85
4.4 The Modeling Process - How We Build Models 88
4.4.1 Create a Conceptual Model 88
4.4.2 Construct the Model 90
4.4.3 Exercise the Model 90
4.4.4 Revise the Model 92
4.5 The Model Toolbox: Types of Models, Their Characteristics, and Uses 92
4.5.1 Characteristics of Models 95
4.5.2 The Model Toolbox 98
4.6 Simulation Modeling 105
4.6.1 Analytical Solutions versus Simulation; When it is Appropriate to Use Simulation 105
4.6.2 Simulation Tools 106
4.7 Determining Required Sample Size 111
4.8 Summary 114
4.9 Exercises 114
References 116

5 Life Cycle Costing 119
Edward Pohl and Heather Nachtmann
5.1 Introduction to Life Cycle Costing 119
5.2 Introduction to Cost Estimating Techniques 121
5.2.1 Types of Costs 125
5.3 Cost Estimation Techniques 126
5.3.1 Estimating by Analogy Using Expert Judgment 127
5.3.2 Parametric Estimation Using Cost Estimating Relationships 128
5.3.3 Learning Curves 141
5.4 System Cost for Systems Decision Making 147
5.4.1 Time Value of Money 147
5.4.2 Inflation 148
5.4.3 Net Present Value 151
5.4.4 Breakeven Analysis and Replacement Analysis 152
5.5 Risk and Uncertainty in Cost Estimation 152
5.5.1 Monte Carlo Simulation Analysis 153
5.5.2 Sensitivity Analysis 157
5.6 Summary 158
5.7 Exercises 159
References 161

PART II SYSTEMS ENGINEERING

6 Introduction to Systems Engineering 165
Gregory S. Parnell

6.1 Introduction
6.2 Definition of System
6.3 Brief History of Systems Engineering *166*
6.4 Systems Trends that Challenge System Engineers 166
6.5 Three Fundamental Tasks of Systems Engineers
6.6 Relationship of Systems Engineers to Other Engineering Disciplines 170
6.7 Education and Training of Systems Engineers 170
6.8 Exercises ,171
References

7 Systems Engineering In Professional Practice 173
Roger C. Burk

7.1 The Systems Engineer in the Engineering Organization 173
7.1.1 The Systems Engineering Job 173
7.1.2 Three Systems Engineering Perspectives
7.1.3 Organizational Placement of Systems Engineers
7.2 Systems Engineering Activities 175
7.2.1 Establish System Need *J76*
7.2.2 Develop System Concept 177
7.2.3 Design and Develop the System 177
7.2.4 Produce System 178
7.2.5 Deploy System 178
7.2.6 Operate System 178
7.2.7 RetireSystem 178
7.3 The Systems Engineer and Others 178
7.3.1 The SE and the Program Manager 178
7.3.2 The SE and the Customer, the User, and the Consumer 180
7.3.3 The SE and the CTO or CIO 180
7.3.4 The SE and the Operations Researcher or System Analyst 181
7.3.5 The SE and the Configuration Manager 181
7.3.6 The SE and the Life-Cycle Cost Estimator 181
7.3.7 The SE and the Engineering Manager 181
7.3.8 The SE and the Discipline Engineer 182
7.3.9 The SE and the Test Engineer 182
7.3.10 The SE and the Specialty Engineer 182
7.3.11 The SE and the Industrial Engineer 183
7.3.12 The SE and Quality Assurance 183

7.4 Building an Interdisciplinary Team 183
7.4.1 Team Fundamentals 183
7.4.2 Team Attitude 184
7.4.3 Team Selection 185
7.4.4 Team Life Cycle 185
7.5 Systems Engineering Responsibilities 186
7.5.1 Systems Engineering Management Plan (SEMP) 186
7.5.2 Technical Interface with Users and Consumers 187
7.5.3 System Requirements Analysis and Management 187
7.5.4 System Architecting 188
7.5.5 Interface Control Documents (ICDs) 189
7.5.6 Test and Evaluation Master Plan (TEMP) 189
7.5.7 Configuration Managertfent (CM) 190
7.5.8 Specialty Engineering 190
7.5.9 Major Program Technical Reviews 191
7.5.10 System Integration and Test 192
7.6 Roles of the System Engineer 192
7.7 Characteristics of the Ideal Systems Engineer 193
7.8 Summary 194
7.9 Exercises 195

8 System Effectiveness **197**
Edward Poht

8.1 Introduction to System Effectiveness 197
8.2 Reliability Modeling 198
8.3 Mathematical Models in Reliability 199
8.3.1 Common Continuous Reliability Distributions 203
8.3.2 Common Discrete Distributions 210
8.4 Basic System Models 214
8.4.1 Series System 214
8.4.2 Parallel System 215
8.4.3 JC-out-of-JV Systems 215
8.4.4 Complex Systems 216
8.5 Component Reliability Importance Measures 218
8.5.1 Importance Measure for Series System 218
8.5.2 Importance Measure for Parallel System 219
8.6 Reliability Allocation and Improvement 219
8.7 Markov Models of Repairable Systems 222
8.7.1 Kolmogorov Differential Equations 222
8.7.2 Transient Analysis 223
8.7.3 Steady State Analysis 225

8.7.4 CTMC Models of Repairable Systems 225
8.7.5 Modeling Multiple Machine Problems 227
8.7.6 Conclusions 232
8.8 Exercises 232

PART III SYSTEMS DECISION MAKING

9 Systems Decision Process Overview 243
Gregory S. Parnell and Paul D. West

9.1 Introduction 243
9.2 Value-Focused Versus Alternative-Focused Thinking 244
9.3 Decision Quality 246
9.4 Systems Decision Process 247
9.5 Role of Stakeholders 249
9.6 Role of Decision Makers 250
9.7 Environment 231
9.8 Comparison with Other Processes 253
9.9 When to Use the Systems Decision Process 253
9.9.1 Need 254
9.9.2 Resources
9.9.3 Decision Maker and Stakeholder Support
9.10 Tailoring the Systems Decision Process to the Systems Engineering Project 254
9.11 Example of Use of the Systems Decision Process 257
9.12 Illustrative Example: Systems Engineering Curriculum Management System (CMS)—Summary and Introduction 258
9.13 Exercises 260
References 261

10 Problem Definition 263
Timothy Trainor and Gregory S. Parnell

10.1 Introduction 263
10.1.1 Introduction to the Problem Definition Phase 264
10.1.2 Comparison with Other Systems Engineering Processes 266
10.1.3 Purpose of the Problem Definition Phase 266
10.1.4 Chapter Example 266
10.2 Stakeholder Analysis 267
10.2.1 Introduction 267
10.2.2 Techniques for Stakeholder Analysis 268
10.2.3 Stakeholder Analysis for the Rocket System Decision Problem 278
10.2.4 Conclusion
10.3 Functional Analysis 279

10.3.1 Terminology . .. 279
10.3.2 Importance of Functional Analysis /• , •••.-.!{ 280
10.3.3 Functional Analysis Techniques • . i./,[1]/ 280
10.3.4 Conclusion . •• j 288
10.4 Value Modeling . - ^ i 289
10.4.1 Introduction 289
10.4.2 Definitions Used in Value Modeling • • 289
10.4.3 Qualitative Value Modeling 290
10.4.4 Quantitative Value Model *ffl&*
10.4.5 Conclusion \ ; § £
10.5 Output of the Problem Definition Phase:
Problem Statement, Screening Criteria, and Value Model 303
10.5.1 Introduction **303**
10.5.2 Discussion **303**
10.5.3 Conclusion **304**
10.6 Illustrative Example: Systems Engineering Curriculum Management System (CMS)—Problem Definition **304**
10.7 Exercises 313

12 Decision Making
Michael J. Kwinn, Jr. and Gregory S. Parnell

12.1 Introduction
12.2 Preparing to Score Candidate Solutions
12.2.1 Revised Problem Statement
12.2.2 Value Models.
12.2.3 Candidate Solutions
12.2.4 Modeling and Simulation Results
12.2.5 Confirm Value Measure Ranges and Weights
12.3 Four Scoring Methods
12.3.1 Operations
12.3.2 Testing
12.3.3 Modeling
12.3.4 Simulation
12.3.5 Expert Opinion
12.3.6 Revisit Value Measures and Weights
12.4 Score Candidate Solutions or Candidate Components
12.4,1 Software for Decision Analysis
12.4.2 Candidate Solution Scoring and Value Calculation
12.4.3 Candidate Components Scoring and System Optimization
12.5 Conduct Sensitivity Analysis
12.5.1 Analyzing Sensitivity on Weights
12.5.2 Sensitivity Analysis on Weights Using Excel
12.5.3 Conduct Monte Carlo Simulation on Measure Scores
12.6 Use Value-Focused Thinking to Improve Solutions
12.7 Conduct Cost Analysis
12.8 Conduct Cost/Benefit Analysis
12.9 Prepare Recommendation Report and Presentation
12.9.1 Develop Report
12.9.2 Develop Presentation
12.10 Prepare for Solution Implementation
12.11 Illustrative Example: Systems Engineering Curriculum Management System (CMS)—Decision Making 391
12.12 Exercises 394

14 Summary ' -•'•• ' **429**
Gregory S. Parnell '

14.1 Systems Thinking is the Key to Systems Engineering and Systems Decision Making 430
14.1.1 Systems Thinking Focuses on System Behavior in the Current and Future Operating Environment 430
14.1.2 System Managers Must Consider the System Life Cycle 430
14.1.3 Modeling and Simulation are Important Tools for Systems Engineers 430
14.1.4 The System Life Cycle is a Key Risk Management Tool 430
14.1.5 Life Cycle Costing is an Important Tool for Systems Engineering 431
14.2 Systems Engineers Play a Critical Role in die System Life Cycle 431

14.2.1 Systems Engineers Lead Interdisciplinary Teams to Obtain System Solutions That Create Value for Decision Makers and Stakeholders 431
14.2.2 Systems Engineers Convert Stakeholder Needs to System Functions and Requirements 431
14.2.3 Systems Engineers Define Value and Manage System Effectiveness 432
14.2.4 Systems Engineers Have Key Roles Throughout the System Life Cycle 432
14.3 A Systems Decision Process is Required for Complex Systems Decisions 432
14.3.1 Problem Definition is the Key to Systems Decisions 433
14.3.2 If We Want Better Decisions, We Need Better System Solution Designs 433
14.3.3 We Need to Identify the Best Value for the Resources 433
14.3.4 Solution Implementation Requires Planning and Execution 433
14.4 Systems Engineering will Become More Challenging 434

Index 435
