

Behavioural Finance

William Forbes

A John Wiley and Sons, Ltd, Publication

Contents

Preface	xv
Acknowledgements	xvii
1 Introduction	1
1.1 Illustration and Structure	2
1.2 Finance Theory as an Engine not a Camera	3
1.2.1 Rational Fools or Folly of Wisdom?	5
1.3 Rebuilding on New Foundations	7
1.3.1 Reasoned Emotion: The Case of Phineas Gage	8
1.3.2 What Can Psychologists Bring to Finance?	9
1.4 Challenging the Classical Assumptions of Finance	9
1.5 Modelling Behavioural Aspects of Finance	11
1.6 The Structure of the Book	12
Appendix: A Financial Tsunami	14
Notes	14
References	14
Part I FOUNDATIONS	17
2 Financial Decision Making	19
2.1 Illustration and Structure	19
2.2 The Expected Utility Rule	20
2.2.1 An Illustration of Expected Utility	21
2.2.2 Attitudes to Risk	22
2.2.3 Diversification as Risk Reduction Strategy	23
2.2.4 How Best To Bear Risk	24
2.3 Expected Utility Theory: Simple But Untrue?	26
2.3.1 Paradoxes and Problems in Early Understanding of Expected Utility Theory	27
2.3.2 Gambling Insurance and Aspiration	29
2.4 Frames for Actions, Contingencies and Outcomes	31
2.4.1 The Decision Process	31
2.4.2 Inferring Big Ideas from Small Samples	32
2.4.3 Stars with Feet of Clay	33
2.4.4 Is There More to Life Than (Maximizing) Utility?	34
2.4.5 Happiness, Well-Being and the Emotional Basis of Utility	34

vi Contents

2.5 Conclusion and Summary	35
Questions	35
Notes	36
References	36
3 Discounting	39
3.1 Illustration and Structure	40
3.2 The Discounted Utility Model	40
3.2.1 Some Problems with the Discounted Utility Model	41
3.2.2 Evaluating Reallocations of Consumption by Equivalent Gains or Compensating Losses of Present Consumption	42
3.2.3 Delays and Speed-Ups of Utility	44
3.3 How and Why Discount Rates Vary	44
3.3.1 Discounting Single Outcomes Compared to Sequences of Outcomes	46
3.4 Investment Behaviour When Discount Rates are Declining: Investing in a ‘Golden Egg’	47
3.5 Hyperbolic Discount Factors	49
3.6 Valuation by Using the Matching Law	51
3.6.1 On Pigeons and Men: Comparing Hyperbolic and Exponential Discounting	53
3.7 How Investment Decisions are Made When Discount Factors Decline Over Time	54
3.7.1 A Simple Example of a Sub-Game Perfect Equilibrium	55
3.7.2 The Properties of a Sub-Game Perfect Investment Strategy Equilibrium	57
3.7.3 How Do Declining Discount Rates Affect Investment Behaviour?	58
3.8 Conclusion and Summary	59
Appendix: Timely Choice: Euler Equations – Dynamics and Inter-Temporal Choice	60
Questions	61
Notes	62
References	62
4 Learning	65
4.1 Illustration and Structure	65
4.2 Rational Learning	66
4.2.1 Bayes’ Rule	66
4.2.2 Elements of Bayesian Revision	68
4.2.3 The Value of Stock Recommendations	70
4.3 Do We Learn the Bayesian Way?	72
4.3.1 Representativeness	74
4.3.2 Representation Bias in the Market: Analysts’ Overreaction to Earnings	74
4.3.3 A Once and For All Lesson?	75
4.4 Over Inference and the Law of Small Numbers	76
4.5 Disagreement, Tastes and the Capital Asset Pricing Model	77
4.6 Conclusion and Summary	79
Appendix: Case Study – Baseball the Bayesian Way	80
Questions	87
Notes	88
References	88

5	Bubbles	89
5.1	Illustration and Structure	90
5.2	Tulipmania and the Didactic Value of Bubbles	91
5.3	The Regulatory Origins of the Most Recent Bubble	92
5.3.1	Long-Term Capital Management	92
5.3.2	The Federal Reserve and Market Restraint	95
5.4	Bubbles: Past, Present and Future	101
5.4.1	Financial Bubbles and Infrastructure Technology	102
5.4.2	Are Bubbles Just Part of the Market Process?	103
5.5	The 1929 Stock-Market Crash	104
5.5.1	Early Signs	104
5.5.2	The Boom is On	105
5.5.3	Innovation and Speculation	106
5.5.4	Investment Trusts in the Boom's Growth	106
5.5.5	The Final Implosion	107
5.6	Should Government Burst the Bubble?	108
5.7	Conclusion and Summary	109
	Appendix: Tulips as Assets and Art	110
	Questions	114
	Notes	114
	References	114
Part II	ASSET PRICING	117
6	Noise Traders	119
6.1	Illustration and Structure	120
6.2	The De Long, Shleifer, Summers and Waldmann Model	121
6.2.1	The Basic Set Up	122
6.2.2	Modelling Mispricing	122
6.2.3	What Investors Want	123
6.2.4	Choosing Optimal Asset Allocations Across the Safe and Risky Asset	124
6.2.5	The Pricing Equation	125
6.2.6	Will Noise Traders Die Out?	128
6.2.7	Decomposing Noise Traders' Profits	130
6.3	Can Investors Get Emotional?	133
6.3.1	Feeling the Risk	134
6.3.2	The Affect Heuristic	135
6.3.3	Panic and Feedback Trading During the 1987 Stock-Market Crash	136
6.3.4	The Diminishing Roar of Noise	137
6.4	Conclusion and Summary	138
	Questions	138
	Notes	139
	References	139
7	Overconfidence and Optimism	141
7.1	Illustration and Structure	142
7.2	A Model of Trading Amongst Optimistic Investors	142
7.2.1	The Model	143
7.2.2	Price Setting	143

7.2.3	Conditions for Overconfident Pricing of the Risky Asset	144
7.2.4	Pricing in Odean's Model	147
7.2.5	The Implications of Odean's Model for Financial Markets	150
7.3	Do Investors Trade Too Much?	150
7.3.1	Optimism in Corporate Finance	151
7.3.2	Facing Failure	151
7.3.3	Who Dares Loses?	153
7.3.4	The Hubris Theory of Takeovers	153
7.4	Conclusion and Summary	154
	Appendix A: Hubris at Work: The AOL-Time Warner Merger	155
	Appendix B: Derivation of Results in Odean's Model	161
	Questions	163
	Notes	163
	References	163
8	Asset Pricing under Prospect Theory	165
8.1	Illustration and Structure	165
8.2	The Basics of Prospect Theory	166
8.2.1	Prospect Theory's Application to Finance	167
8.2.2	Benchmarks, Gains and Losses and the Dynamics of Utility under Prospect Theory	168
8.2.3	Integration or Segregation of Losses and Gains in the Presence of Loss Aversion	169
8.2.4	The Evolution of Investor Benchmarks	170
8.2.5	Price Formation in a Market Populated By Investors With Prospect Theory Utility Functions	171
8.2.6	Pricing in the Standard Inter-Temporal Consumption-Based Asset-Pricing Model or Economy I	171
8.3	Does Prospect Theory Work?	172
8.3.1	Can Prospect Theory Explain the Internet Bubble?	172
8.3.2	Can Prospect Theory Explain IPO Underpricing?	174
8.3.3	Prospect Theory Here, There and Everywhere	176
8.4	The Cumulative Probability Version of Prospect Theory	176
8.5	Does Cumulative Prospect Theory Work?	177
8.5.1	Cumulative Prospect Theory and Asset Pricing	179
8.6	Conclusion and Summary	181
	Appendix: CARA Utility	181
	Questions	182
	Note	182
	References	183
9	Overreaction and/or Underreaction	185
9.1	Illustration and Structure	185
9.2	The DHS Model	186
9.2.1	Reversals of Fortune	188
9.2.2	Pricing When Confidence Levels Depend on the Relation Between the Public and Private Signals	189

9.2.3	Investor Extrapolation and Reversals of Fortune	192
9.2.4	Many Theories in Search of a Decisive Verification	192
9.2.5	Momentum and Underreaction: Two Stock-Market Anomalies or One?	194
9.3	No News Is . . . ?	194
9.3.1	The Jackson and Johnson (JJ) Model's Message	195
9.3.2	How the JJ Model Works	196
9.3.3	Stock-Market Responses to News and No News	199
9.4	Conclusion and Summary	199
	Questions	199
	Note	199
	References	200
10	Momentum	201
10.1	Illustration and Structure	201
10.2	Grinblatt and Han's (2005) Model	203
10.2.1	Modelling Asset Demand in the GH Model	204
10.2.2	Investor Returns and the Evolution of the Reference Point	207
10.3	What Drives Stock-Market Momentum?	208
10.3.1	Evidence of PEAD	209
10.4	What Causes PEAD?	212
10.4.1	Is PEAD Due to Changes in Risk?	212
10.4.2	Are Prices Following Themselves or Following Earnings?	213
10.4.3	Is PEAD in the Market or in the Eye of the Researcher?	215
10.4.4	Show Me the Money	216
10.5	Conclusion and Summary	217
	Questions	217
	Note	218
	References	218
11	Herding	221
11.1	Illustration and Structure	221
11.2	The FSS Model	222
11.2.1	The Basic Set Up	222
11.2.2	The Price-Setting Mechanism Used by Market-Makers	223
11.2.3	Informed Speculators' Demands	224
11.3	Conformity as a Force for Social Good and Evil	228
11.3.1	Evidence on Herding and its Effect	229
11.3.2	Herding in Investment Advice	230
11.3.3	Words which Cannot be Spoken	230
11.3.4	Private Truths and Public Lies	231
11.3.5	The Herd in History	233
11.4	Conclusion and Summary	233
	Appendix: <i>The United States vs. Microsoft</i>	234
	Questions	236
	Note	237
