Real Options in Theory and Practice

Graeme Guthrie

OXFORD
UNIVERSITY PRESS
2009

Contents

1 Introduction 3
- 1.1 The Aim of Real Options Analysis 3
- 1.2 Placing Real Options Analysis in Context 4
  - 1.2.1 Static DCF Analysis 4
  - 1.2.2 Decision Tree Analysis 5
  - 1.2.3 Real Options Analysis 6
- 1.3 Outline of the Book 6
- 1.4 Spreadsheets 8

I Foundations

2 The Modeling Framework 13
- 2.1 Choosing an Objective Function 13
  - 2.1.1 Shareholder Unanimity 14
  - 2.1.2 A Special Case: The Net Present Value Rule 16
  - 2.1.3 Calculating the Objective Function 17
- 2.2 Modeling Risk and Time 18
- 2.3 Static versus Dynamic Decision Making 20
- 2.4 Problems 25

3 Valuing Single-period Cash Flows 27
- 3.1 Arbitrage-free Asset Prices 27
- 3.2 Valuation when the State Variable is the Price of a Traded Asset 30
- 3.3 Valuation Using Forward and Futures Contracts 32

3.4 Valuation when the State Variable is not Necessarily the Price of a Traded Asset 33
3.4.1 Capital Asset Pricing Model 34
3.4.2 Risk-neutral Probabilities Implied by the CAPM 35
3.5 Summarizing the Valuation Approach 39
3.6 Problems 39
3.A Appendix 40
3.A.1 The Fundamental Asset Pricing Formula 40
3.A.2 Properties of the Risk-neutral Probabilities 41
3.A.3 The Certainty-equivalent Form of the CAPM 42
3.A.4 The RADR Form of the CAPM 43

4 Valuing Multi-period Cash Flows 45
4.1 Valuing Distant Cash Flows Using Backward Induction 48
4.2 Two Situations where Valuation can be Streamlined 53
4.2.1 A "One-shot" Valuation Approach 53
4.2.2 Valuing Cash Flows that are Proportional to the State Variable 56
4.3 Valuing Multi-period Cash Flows as Portfolios 59
4.3.1 The Portfolio Approach 59
4.3.2 Relationship with Static DCF Analysis 60
4.3.3 Valuing Annuities 63
4.4 Valuing Multi-period Cash Flows Using Backward Induction 65
4.5 Summarizing the Valuation Approach 67
4.6 Problems 67
4.A Appendix: The RADR Form of the CAPM 70
4.B Appendix: Valuation with Personal Taxes 71
4.B.1 Risk-neutral Pricing Formula 72
4.B.2 Valuation when the State Variable is the Price of a Traded Asset 74
4.B.3 Valuation Using the CAPM 74

5 Combining Valuation and Decision Making 77
5.1 A Simple Example of a Real Option 78
5.1.1 Invest Now or Not at All 78
5.1.2 Invest Now or Wait and See 79
5.2 Decision Trees 83
5.3 Fundamental Valuation Equation 86
5.4 Filling in the Trees Using Dynamic Programming 88
5.5 Summarizing our Approach to Analyzing Real Options 92
5.6 Problems 92

II Component Real Options

6 Options that do not Affect the State of a Project 97
6.1 Examples of Options that do not Affect the State of a Project 99
6.2 Solving the Production-suspension Problem 100

6.2.1 Setting Up the Production-suspension Problem 100
6.2.2 Valuation without the Suspension Option 100
6.2.3 Valuation with the Suspension Option 102
6.2.4 A Numerical Example 104
6.2.5 Can we Use Static DCF Analysis to Examine this Problem? 105
6.3 Solving Problems Involving Options that do not Affect the State of a Project 110
6.4 Problems 111

7 Simple Timing Options 114
7.1 Examples of Simple Timing Options 115
7.1.1 The Optimal Time to Invest 115
7.1.2 The Optimal Time to Abandon 117
7.1.3 The Optimal Time to Act when Success is Uncertain 118
7.1.4 The General Simple Timing Option Problem 118
7.2 Solving the Investment Timing Problem 119
7.2.1 Setting Up the Investment Timing Problem 119
7.2.2 Analyzing the Investment Timing Problem 119
7.2.3 A Numerical Example 122
7.2.4 Asymmetric Risk and the Value of Waiting 125
7.2.5 Extension: Construction Takes Multiple Periods 127
7.3 Solving the Abandonment Timing Problem 129
7.3.1 Setting Up the Abandonment Timing Problem 129
7.3.2 Valuing the Project when Production Cannot be Abandoned 129
7.3.3 Valuing the Project when Production Can be Abandoned 130
7.3.4 A Numerical Example 132
7.3.5 Extension: Abandonment Takes Multiple Periods 134
7.4 Solving the R&D Timing Problem 135
7.4.1 Setting Up the R&D Timing Problem 135
7.4.2 Analyzing the R&D Timing Problem 136
7.4.3 A Numerical Example 139
7.5 Solving Problems Involving Simple Timing Options 141
7.6 Problems 143

8 Compound Timing Options 147
8.1 Examples of Compound Timing Options 149
8.1.1 Sequential Investment 149
8.1.2 Resource Extraction 150
8.1.3 Sequential Actions when Success is Uncertain 150
8.1.4 The General Compound Timing Option Problem 151
8.2 Solving the Sequential Investment Problem 152
8.2.1 Setting Up the Sequential Investment Problem 152
8.2.2 Analyzing the Sequential Investment Problem 152
8.2.3 A Numerical Example 155
8.2.4 Determinants of Option Value: Capital Expenditure Profile 158

8.3 Solving the Resource Extraction Problem 159
8.3.1 Setting Up the Resource Extraction Problem 159
8.3.2 Analyzing the Resource Extraction Problem 159
8.3.3 A Numerical Example 162
8.3.4 Valuing Copper Reserves 164
8.4 Solving the Multi-stage R&D Timing Problem 168
8.4.1 Setting Up the R&D Timing Problem 168
8.4.2 Analyzing the R&D Timing Problem 168
8.4.3 A Numerical Example 171
8.5 Solving Problems Involving Compound Timing Options 171
8.6 Problems 174

9 Über-compound Timing Options 180
9.1 Examples of Über-compound Timing Options 182
9.1.1 Extending the Simple Timing Options of Chapter 7 182
9.1.2 Extending the Compound Timing Options of Chapter 8 183
9.1.3 The General Über-compound Timing Option Problem 184
9.2 Solving the Land-development Problem 184
9.2.1 Setting Up the Land-development Problem 184
9.2.2 Valuing the Land when the Decision Cannot be Delayed 184
9.2.3 Valuing the Land when the Decision Can be Delayed 185
9.2.4 A Numerical Example 187
9.3 Solving the Time-to-build Problem 193
9.3.1 Setting Up the Time-to-build Problem 193
9.3.2 Analyzing the Time-to-build Problem 194
9.3.3 A Numerical Example 196
9.4 Solving Problems Involving Über-compound Timing Options 198
9.5 Problems 201

10 Switching Options 204
10.1 Examples of Switching Options 207
10.1.1 The Option to Switch between Two States 207
10.1.2 The Option to Switch between Multiple States 207
10.1.3 The General Switching Option Problem 209
10.2 Solving the Production-suspension Problem 209
10.2.1 Setting Up the Production-suspension Problem 209
10.2.2 Analyzing the Production-suspension Problem 210
10.2.3 A Numerical Example 212
10.2.4 The Trade-off between Wages and Severance Pay 217
10.3 Solving the Machinery-replacement Problem 218
10.3.1 Setting Up the Machinery-replacement Problem 219
10.3.2 Static DCF Analysis 219
10.3.3 Real Options Analysis 221
10.3.4 A Numerical Example 223

10.4 Solving Problems Involving Switching Options 226
10.5 Problems 227

11 Learning Options 232
11.1 Examples of Learning Options 234
11.2 Modeling Information Gathering 235
11.2.1 Generalizing our Concept of the "State of the Project" 235
11.2.2 Using Bayes' Theorem 237
11.3 Staging the Roll-out of a New Venture 242
11.3.1 Setting Up the Roll-out Problem 242
11.3.2 Analyzing the Roll-out Problem 242
11.3.3 A Numerical Example 246
11.4 Solving the Oil Exploration Problem 249
11.4.1 Setting Up the Oil Exploration Problem 249
11.4.2 Analyzing the Oil Exploration Problem 249
11.4.3 A Numerical Example 253
11.5 Solving Problems Involving Learning Options 255
11.6 Problems 258

III Calibrating the Model

12 Calibration Using Spot and Futures Price Data 263
12.1 Calibrating a Tree of Prices Using Historical Data 265
12.1.1 A Price that Follows a Random Walk 266
12.1.2 A Price that is Mean Reverting 271
12.2 Calibrating Risk-neutral Probabilities 280
12.2.1 Using the CAPM 281
12.2.2 Matching the Relationship between Spot and Futures Prices 284
12.2.3 Matching the Current Term Structure of Futures Prices 288
12.3 Deciding which Approach to Use 291
12.4 Problems 292
12.A Appendix 295
12.A.1 Mean and Variance of Changes in the Log Price 295
12.A.2 Truncating the Binomial Tree 296
12.A.3 Estimating Beta when the Spot Price is Mean Reverting 297
12.A.4 Matching the Current Term Structure of Futures Prices 298

13 Calibration Using Option Price Data 300
13.1 Implied Volatility 303
13.2 Implied Binomial Trees: European Options 309
13.2.1 Estimating the Risk-neutral Probability of Reaching Each Terminal Node 309
13.2.2 Filling in the Remainder of the Futures Price Tree 312

13.3 Implied Binomial Trees: American Options 315
13.4 From a Futures-price Tree to a State-variable Tree 317
13.5 Problems 319
13.A Appendix 320
13.A.1 Risk-neutral Probabilities when the State Variable is a Futures Price 320
13.A.2 Rubinstein's Implied Binomial Tree 321
13.A.3 Properties of the State-variable Tree 322

14 Calibrating Trees of Alternative State Variables 324
14.1 Non-price State Variables 325
14.1.1 Calibrating the Tree for the State Variable 327
14.1.2 Calibrating Risk-neutral Probabilities 329
14.2 Market Values as State Variables 333
14.2.1 Using Comparison Firms 334
14.2.2 Enterprise Value versus Equity Value 336
14.2.3 Estimating Volatility 337
14.2.4 Estimating Risk-neutral Probabilities 341
14.3 The Choice of State Variable 342
14.4 Problems 343
14.A Appendix: Calculating Enterprise Returns 343

IV Putting the Pieces Together
15 Forestry Management and Valuation 347
15.1 Setting Up the Model 348
15.2 The Solution Procedure 350
15.3 Data and Calibration 352
15.4 Results 355
15.5 Problems 360

16 Developing a Gas Field 362
16.1 Setting Up the Model 364
16.2 The Solution Procedure 365
16.3 Data and Calibration 368
16.4 Results 373
16.5 Problems 378
16.A Appendix: The Distribution of the Development Time 379

17 Mothballing an Ethanol Plant 381
17.1 Setting Up the Model 382
17.2 The Solution Procedure 383
17.3 Data and Calibration 387
17.4 Results 394
17.5 Problems 399

18 Where to from Here? **401**
18.1 Improved Numerical Algorithms 401
18.2 Greater Econometric Sophistication 402
18.3 Multiple State Variables 403

Bibliography 406
