Contents

Acknowledgments	ix
About the Contributors	xiii
Abbreviations	xv
1. Introduction	
1. Book Contents and Structure	3
2. Definitions	5
Choice Awareness	5
Radical Technological Change	6
Applied and Concrete Economics	7
Renewable Energy	7
Renewable Energy Systems	8
3. Renewable versus Sustainable	9
Sustainable Energy	9
Political Reasons for Renewable Energy	10
Renewable Energy and Democracy	12
2. Theory: Choice Awareness Theses	
1. Choice and Change	13
Choice/No Choice at the Individual Level	14
Choice/No Choice at the Societal Level	15
Radical Technological Change	18
2. Choice Perception and Elimination	20
Choice Perception	20
Choice-Eliminating Mechanisms	23
The First Choice Awareness Thesis	27
3. Raising Choice Awareness	28
The Second Choice Awareness Thesis	31
3. Methodology: Choice Awareness Strategies	
1. Technical Alternatives	33
2. Economic Feasibility Studies	37
3. Public Regulation	41
4. Democratic Infrastructure	45
5. Research Methodology	47
4. Tool: The EnergyPLAN Energy System Analysis Model	
1. Overall Considerations	51
Three Implementation Phases	53

Different Types of Energy System Analysis Models	54
Hourly Simulation Models at the National Level	59
2. The EnergyPLAN Model	61
Purpose and Application	61
Energy Systems Analysis Structure	64
Energy Systems Analysis Methodology	66
A Step-by-Step Approach to National Energy Systems Analysis	67
Sister Models to EnergyPLAN	70
3. Reflections	72
5. Analysis: Large-Scale Integration of Renewable Energy	
1. The Danish Reference Energy System	76--
Electrification of Transport Scenario	78
2. Excess Electricity Diagrams	79
3. Optimal Combinations of RES	86
4. Flexible Energy Systems	88
Flexible Energy System	91
Flexible Energy Systems Including Electricity for Transport	92
5. Different Energy Systems	94
6. Grid Stability	97
7. Local Energy Markets	103
8. Integration of Transport	109
9. Electric Vehicles and V2G	112
10. Electricity Storage Options	119
11. Conclusions	122
Principles and Methodologies	123
Recommendations	124
6. Analysis: 100 Percent Renewable Energy Systems	
1. The Los Angeles Community College District Case	129
2. The First Approach to Coherent Renewable Energy Systems	135
3. The Danish Society of Engineers' Energy Plan	143
4. Reflections	155
Principles and Methodologies	155
Conclusions and Recommendations	155
7. Empirical Examples: Choice Awareness Cases	
1. Case I: The Nordkraft Power Station (1982-1983)	160
The "No Alternative" Situation	161
The Concrete Alternative Proposal	163
Conclusions and Reflections	166
2. Case II: The Aalborg Heat Planning (1984-1987)	167
The Alternatives in Question	168
Choice-Eliminating Strategies	170
Conclusions and Reflections	171

Contents

3. Case III: The Evaluation of Biogas (1990-1992)	173
The Applied Neoclassical Cost-Benefit Analysis	174
Feasibility Study Based on Concrete Institutional Economics	175
Conclusions and Reflections	178
4. Case IV: The Nordjyllandsværk (1991-1994)	179
The No Alternative Situation	180
The Alternative Proposal	182
Discussion of the Alternative	185
Conclusions and Reflections	186
5. Case V: The Transmission Line Case (1992-1996)	188
Shifting Arguments for the Need	189
Security of Supply	190
Concrete Technical Alternatives	192
Conclusions and Reflections	193
6. Case VI: European EIA procedures (1993-1997)	194
Implementation of the EIA Principles in Denmark	195
Example 1: The Nordjyllandsværk	196
Example 2: High-Voltage Transmission Lines	199
Example 3: The Avedøreværk	200
Conclusions and Reflections	200
7. Case VII: The German Lausitz Case (1993-1994)	202
The Alternative	204
Conclusions and Reflections	208
8. Case VIII: The Green Energy Plan (1996)	209
The Design of the Concrete Technical Alternative	210
Evaluation and Comparisons	211
Conclusions and Reflections	214
9. Case IX: The Thai Power Station Case (1999)	215
The Hin Krut Power Station in Prachuap Khiri Khan	216
Official Economic Objectives for Thailand	217
The Design of a Concrete Technical Alternative	218
Comparative Feasibility Study	219
Conclusions and Reflections	221
10. Case X: The Economic Council Case (2002-2003)	223
Missing Capacity Benefits (Unfair Premises)	224
Balance of Payment, Employment, and Technological Innovation	228
Conclusions and Reflections	229
11. Case XI: The North Carolina Case (2006-2007)	231
Resource Assessment and Feasibility Study	232
Conclusions and Reflections	235
12. Case XII: The IDA Energy Plan 2030 (2006-2007)	236
Conclusions and Reflections	239
13. Summary	240
Existing Organizations Initiate Old Technology Proposals	240
Objectives of Radical Technological Change is Disregarded	241
Alternatives Must Come from Someone Else	241
Institutional Change is Essential	242
Applied Neoclassical Economics Provide Irrelevant Information	243

Concrete Institutional Economics Provides Relevant Information	243
Concrete Alternatives Raise Choice Awareness	244
Concrete Alternatives Help Identify Institutional Barriers	245
14. Conclusions	245
8. Conclusions and Recommendations	
1. Conclusions	247
Choice Awareness	247
Renewable Energy Systems	250
2. Recommendations	253
100 Percent Renewable Energy Systems	254
Large-Scale Integration of Renewable Energy	255
The New Coal-Fired Power Station in Germany	256
Slowdown in Onshore Wind Power	258
Bibliography	261
Index	269
