Contents

To the reader	vii
Instead of a preface	ix
About the authors	xvii
Introduction	xxi

PART I: UNDERSTANDING DATA

1	What is <i>data</i> (and should you lose any sleep over it)?	1
	The nature of data	1
	Types of data	4
	Data and information	7
	Summary	8
	Questions and problems	8
	Notes	9
	Further reading	9
2	Does <i>sampling</i> have a purpose other than providing employment for statisticians?	10
	The nature of sampling	10
	Sample selection	12
	Sample size determination	16
	The sampling process	18
	Summary	" 19
	Questions and problems	20
	Notes	" 20
	Further reading	20
3	Why should you be concerned about different types of <i>measurement</i> and are some better than others?	21
	The nature of measurement	21
	Measurement scales	23
	Scaling formats	. 30
	Measurement error	32
	Summary	37
	Questions and problems	37
	Notes	38
	Further reading	38

PART II: PREPARING DATA FOR ANALYSIS

- 4 Have you cleaned your data and found the *mistakes* you made? 39

The role of data cleaning
 The role of data coding
 Finding your mistakes
 Transforming variables
 Summary
 Questions and problems
 Notes
 Further reading

- 5 Do you have access to a *computer package* or must you employ Bill Gates?

The role of computers in data analysis
 Data input packages
 Data analysis packages
 Presentation packages
 Summary
 Questions and problems
 Further reading

- 6 Why do you need to know your *objective* before you fail to achieve it?

The need for analysis objectives
 Setting analysis objectives
 The question of focus
 Choosing the method of analysis
 Summary
 Questions and problems
 Notes
 Further reading

PART III: CARRYING OUT THE ANALYSIS

- 7 Why not take it easy initially and *describe* your data?

Purposes of data description
 Frequency distributions
 Grouped frequency distributions
 Graphical representation of frequency distributions
 Summary
 Questions and problems
 Notes
 Further reading

8 Can you use few numbers in place of many to <i>summarize</i> your data?	90
Characterizing frequency distributions	90
Measuring central location	93
The mode	93
The median	95
The mean	97
Measuring variability	100
The index of diversity	101
The range and interquartile range	101
The variance and standard deviation	102
Measuring skewness and kurtosis	105
Chebychev's theorem and the normal distribution	106
Summary	114
Questions and problems	115
Notes	115
Further reading	115
9 What about using <i>estimation</i> to see what the population looks like?	116
The nature of estimation	116
Setting confidence intervals	119
Estimating the population proportion	121
Estimating the population mean	123
Estimating other population parameters	126
Summary	127
Questions and problems	128
Notes	128
Further reading	128
10 How about sitting back and <i>hypothesizing</i> ?	130
The nature and role of hypotheses	130
A general approach to hypothesis-testing	135
Step 1: Formulation of null and alternative hypotheses	136
Step 2: Specification of significance level	137
Step 3: Selection of an appropriate statistical test	140
Step 4: Identification of the probability distribution of the test statistic and definition of the region of rejection	143
Step 5: Computation of the test statistic and rejection or non-rejection of the null hypothesis	146
Hypothesis-testing and confidence intervals	147
Statistical and substantive significance	148
Summary	150
Questions and problems	150
Notes	151
Further reading	151

11	Simple things first: <i>one</i> variable, <i>one</i> sample	152
	Single sample hypotheses	152
	Assessing fit	153
	The one-sample chi-square test	154
	The one-sample Kolmogorov-Smirnov (K-S) test	157
	Testing for location	159
	The one-sample sign test	159
	The one-sample t-test	161
	Testing for variability	164
	Testing for proportions	165
	Testing for randomness	167
	Summary	169
	Questions and problems	170
	Notes	171
	Further reading	171
12	Getting experienced: making <i>comparisons</i>	172
	The pleasure of comparing	172
	Independent measures: comparing groups	173
	The two-sample chi-square test	175
	The f_c -sample chi-square test	179
	The Mann-Whitney U test	180
	The Kruskal-Wallis (K.W) one-way analysis of variance (ANOVA)	182
	The two-sample t-test	184
	One-way analysis of variance (ANOVA)	187
	Related measures: comparing variables	190
	The McNemar test	192
	The Cochran Q test	193
	The paired-sample sign test	193
	The Friedman two-way analysis of variance (ANOVA)	194
	The paired-sample t-test	195
	The t_r -test for all pairs	196
	Summary -	196
	Questions and problems	196
	Notes	197
	Further reading	197
13	Getting adventurous: searching for <i>relationships</i>	198
	The mystique of relationships	198
	Measures of association	199
	Cramer's V	199
	Spearman's rank-order correlation	201
	Pearson's product moment correlation	203
	Correlation and causality	206
	Summary	207
	Questions and problems	207
	Notes	208
	Further reading	208

14	Getting hooked: a look into a <i>multivariate</i> future	209
	The nature of multivariate analysis	209
	Types of multivariate techniques	211
	Dependence methods	214
	Multiple regression analysis	214
	Multiple discriminant analysis	214
	Canonical correlation analysis	214
	Multivariate analysis of variance	215
	Interdependence methods	•216
	Factor analysis	216
	Cluster analysis	217
	Summary	217
	Questions and problems	217
	Further reading	218
15	It's all over ... or is it?	219
	The written research report	219
	The oral presentation	221
	Summary	224
	Questions and problems	225
	Further reading	225
	Index	227
