<b>Preface</b> . . . . .	XV
Audience and style . . . . .	XVII
Structure of the work . . . . .	XVIII
A guided tour by means of a simplistic example . . . . .	XIX
Acknowledgments . . . . .	XXVI

## Part I The statistics of asset allocation

<b>1 Univariate statistics</b> . . . . .	3
1.1 Building blocks . . . . .	3
1.2 Summary statistics . . . . .	9
1.2.1 Location . . . . .	9
1.2.2 Dispersion . . . . .	11
1.2.3 Higher-order statistics . . . . .	14
1.2.4 Graphical representations . . . . .	15
1.3 Taxonomy of distributions . . . . .	16
1.3.1 Uniform distribution . . . . .	16
1.3.2 Normal distribution . . . . .	18
1.3.3 Cauchy distribution . . . . .	20
1.3.4 Student $t$ distribution . . . . .	22
1.3.5 Lognormal distribution . . . . .	24
1.3.6 Gamma distribution . . . . .	26
1.3.7 Empirical distribution . . . . .	28
1.T Technical appendix . . . . .	www
1.E Exercises . . . . .	www
<b>2 Multivariate statistics</b> . . . . .	33
2.1 Building blocks . . . . .	34
2.2 Factorization of a distribution . . . . .	38
2.2.1 Marginal distribution . . . . .	38
2.2.2 Copulas . . . . .	40

## VIII Contents

2.3	Dependence . . . . .	45
2.4	Shape summary statistics . . . . .	48
2.4.1	Location . . . . .	48
2.4.2	Dispersion . . . . .	50
2.4.3	Location-dispersion ellipsoid . . . . .	54
2.4.4	Higher-order statistics . . . . .	57
2.5	Dependence summary statistics . . . . .	59
2.5.1	Measures of dependence . . . . .	59
2.5.2	Measures of concordance . . . . .	64
2.5.3	Correlation . . . . .	67
2.6	Taxonomy of distributions . . . . .	70
2.6.1	Uniform distribution . . . . .	70
2.6.2	Normal distribution . . . . .	72
2.6.3	Student $t$ distribution . . . . .	77
2.6.4	Cauchy distribution . . . . .	81
2.6.5	Log-distributions . . . . .	82
2.6.6	Wishart distribution . . . . .	84
2.6.7	Empirical distribution . . . . .	87
2.6.8	Order statistics . . . . .	89
2.7	Special classes of distributions . . . . .	91
2.7.1	Elliptical distributions . . . . .	91
2.7.2	Stable distributions . . . . .	96
2.7.3	Infinitely divisible distributions . . . . .	98
2.T	Technical appendix . . . . .	www
2.E	Exercises . . . . .	www
3	Modeling the market . . . . .	101
3.1	The quest for invariance . . . . .	103
3.1.1	Equities, commodities, exchange rates . . . . .	105
3.1.2	Fixed-income market . . . . .	109
3.1.3	Derivatives . . . . .	114
3.2	Projection of the invariants to the investment horizon . . . . .	122
3.3	From invariants to market prices . . . . .	126
3.3.1	Haw securities . . . . .	126
3.3.2	Derivatives . . . . .	129
3.4	Dimension reduction . . . . .	131
3.4.1	Explicit factors . . . . .	133
3.4.2	Hidden factors . . . . .	138
3.4.3	Explicit vs. hidden factors . . . . .	143
3.4.4	Notable examples . . . . .	145
3.4.5	A useful routine . . . . .	147
3.5	Case study: modeling the swap market . . . . .	150
3.5.1	The market invariants . . . . .	150
3.5.2	Dimension reduction . . . . .	151
3.5.3	The invariants at the investment horizon . . . . .	160
3.5.4	From invariants to prices . . . . .	162

3.T	Technical appendix . . . . .	.www
3.E	Exercises . . . . .	.www

## Part II Classical asset allocation

<b>4</b>	<b>Estimating the distribution of the market invariants . . . . .</b>	<b>169</b>
4.1	Estimators . . . . .	171
4.1.1	Definition . . . . .	172
4.1.2	Evaluation . . . . .	173
4.2	Nonparametric estimators . . . . .	178
4.2.1	Location, dispersion and hidden factors . . . . .	181
4.2.2	Explicit factors . . . . .	184
4.2.3	Kernel estimators . . . . .	185
4.3	Maximum likelihood estimators . . . . .	186
4.3.1	Location, dispersion and hidden factors . . . . .	190
4.3.2	Explicit factors . . . . .	192
4.3.3	The normal case . . . . .	193
4.4	Shrinkage estimators . . . . .	200
4.4.1	Location . . . . .	201
4.4.2	Dispersion and hidden factors . . . . .	204
4.4.3	Explicit factors . . . . .	209
4.5	Robustness . . . . .	209
4.5.1	Measures of robustness . . . . .	211
4.5.2	Robustness of previously introduced estimators . . . . .	216
4.5.3	Robust estimators . . . . .	221
4.6	Practical tips . . . . .	223
4.6.1	Detection of outliers . . . . .	223
4.6.2	Missing data . . . . .	229
4.6.3	Weighted estimates . . . . .	232
4.6.4	Overlapping data . . . . .	234
4.6.5	Zero-mean invariants . . . . .	234
4.6.6	Model-implied estimation . . . . .	235
4.T	Technical appendix . . . . .	.www
4.E	Exercises . . . . .	.www
<b>5</b>	<b>Evaluating allocations . . . . .</b>	<b>237</b>
5.1	Investor's objectives . . . . .	239
5.2	Stochastic dominance . . . . .	243
5.3	Satisfaction . . . . .	249
5.4	Certainty-equivalent (expected utility) . . . . .	260
5.4.1	Properties . . . . .	262
5.4.2	Building utility functions . . . . .	270
5.4.3	Explicit dependence on allocation . . . . .	274
5.4.4	Sensitivity analysis . . . . .	276
5.5	Quantile (value at risk) . . . . .	277
5.5.1	Properties . . . . .	278

<b>6</b>	<b>Optimizing allocations . . . . .</b>	<b>301</b>
6.1	The general approach . . . . .	302
6.1.1	Collecting information on the investor . . . . .	303
6.1.2	Collecting information on the market . . . . .	305
6.1.3	Computing the optimal allocation . . . . .	306
6.2	Constrained optimization . . . . .	311
6.2.1	Positive orthants: linear programming . . . . .	313
6.2.2	Ice-cream cones: second-order cone programming . . . . .	313
6.2.3	Semidefinite cones: semidefinite programming . . . . .	315
6.3	The mean-variance approach . . . . .	315
6.3.1	The geometry of allocation optimization . . . . .	316
6.3.2	Dimension reduction: the mean-variance framework . . . . .	319
6.3.3	Setting up the mean-variance optimization . . . . .	320
6.3.4	Mean-variance in terms of returns . . . . .	323
6.4	Analytical solutions of the mean-variance problem . . . . .	326
6.4.1	Efficient frontier with affine constraints . . . . .	327
6.4.2	Efficient frontier with linear constraints . . . . .	330
6.4.3	Effects of correlations and other parameters . . . . .	332
6.4.4	Effects of the market dimension . . . . .	335
6.5	Pitfalls of the mean-variance framework . . . . .	336
6.5.1	MV as an approximation . . . . .	336
6.5.2	MV as an index of satisfaction . . . . .	338
6.5.3	Quadratic programming and dual formulation . . . . .	340
6.5.4	MV on returns: estimation versus optimization . . . . .	342
6.5.5	MV on returns: investment at different horizons . . . . .	343
6.6	Total-return versus benchmark allocation . . . . .	347
6.7	Case study: allocation in stocks . . . . .	354
6.7.1	Collecting information on the investor . . . . .	355
6.7.2	Collecting information on the market . . . . .	355
6.7.3	Computing the optimal allocation . . . . .	357
6-T	Technical appendix . . . . .	www
6.E	Exercises . . . . .	www

## Part III Accounting for estimation risk

<b>Estimating the distribution of the market invariants . . . . .</b>	363
7.1 Bayesian estimation . . . . .	364
7.1.1 Bayesian posterior distribution . . . . .	364
7.1.2 Summarizing the posterior distribution . . . . .	366
7.1.3 Computing the posterior distribution . . . . .	369
7.2 Location and dispersion parameters . . . . .	370
7.2.1 Computing the posterior distribution . . . . .	370
7.2.2 Summarizing the posterior distribution . . . . .	373
7.3 Explicit factors . . . . .	377
7.3.1 Computing the posterior distribution . . . . .	377
7.3.2 Summarizing the posterior distribution . . . . .	380
7.4 Determining the prior . . . . .	383
7.4.1 Allocation-implied parameters . . . . .	385
7.4.2 Likelihood maximization . . . . .	387
7.T Technical appendix . . . . .	www
7.E Exercises . . . . .	www
<b>Evaluating allocations . . . . .</b>	389
8.1 Allocations as decisions . . . . .	390
8.1.1 Opportunity cost of a sub-optimal allocation . . . . .	390
8.1.2 Opportunity cost as function of the market parameters .	394
8.1.3 Opportunity cost as loss of an estimator . . . . .	397
8.1.4 Evaluation of a generic allocation decision . . . . .	401
8.2 Prior allocation . . . . .	403
8.2.1 Definition . . . . .	403
8.2.2 Evaluation . . . . .	404
8.2.3 Discussion . . . . .	406
8.3 Sample-based allocation . . . . .	407
8.3.1 Definition . . . . .	407
8.3.2 Evaluation . . . . .	408
8.3.3 Discussion . . . . .	412
8.T Technical appendix . . . . .	www
8.E Exercises . . . . .	www
<b>Optimizing allocations . . . . .</b>	417
9.1 Bayesian allocation . . . . .	418
9.1.1 Utility maximization . . . . .	419
9.1.2 Classical-equivalent maximization . . . . .	421
9.1.3 Evaluation . . . . .	422
9.1.4 Discussion . . . . .	425
9.2 Black-Litterman allocation . . . . .	426
9.2.1 General definition . . . . .	426
9.2.2 Practicable definition: linear expertise on normal markets . . . . .	429
9.2.3 Evaluation . . . . .	433
9.2.4 Discussion . . . . .	436

## XII      Contents

9.3	Resampled allocation . . . . .	437
9.3.1	Practicable definition: the mean-variance setting . . . . .	438
9.3.2	General definition . . . . .	440
9.3.3	Evaluation . . . . .	443
9.3.4	Discussion . . . . .	445
9.4	Robust allocation . . . . .	445
9.4.1	General definition . . . . .	445
9.4.2	Practicable definition: the mean-variance setting . . . . .	450
9.4.3	Discussion . . . . .	453
9.5	Robust Bayesian allocation . . . . .	454
9.5.1	General definition . . . . .	455
9.5.2	Practicable definition: the mean-variance setting . . . . .	457
9.5.3	Discussion . . . . .	459
9.T	Technical appendix . . . . .	www
9.E	Exercises . . . . .	www

## Part IV Appendices

<b>A</b>	<b>Linear algebra . . . . .</b>	465
A.I	Vector space . . . . .	465
A.2	Basis . . . . .	468
A.3	Linear transformations . . . . .	469
A.3.1	Matrix representation . . . . .	470
A.3.2	Rotations . . . . .	471
A.4	Invariants . . . . .	472
A.4.1	Determinant . . . . .	472
A.4.2	Trace . . . . .	474
A.4.3	Eigenvalues . . . . .	474
A.5	Spectral theorem . . . . .	475
A.5.1	Analytical result . . . . .	475
A.5.2	Geometrical interpretation . . . . .	478
A.6	Matrix operations . . . . .	480
A.6.1	Useful identities . . . . .	480
A.6.2	Tensors and Kronecker product . . . . .	482
A.6.3	The "vec" and "vech" operators . . . . .	483
A.6.4	Matrix calculus . . . . .	485
<b>B</b>	<b>Functional Analysis . . . . .</b>	487
B.I	Vector space . . . . .	487
B.2	Basis . . . . .	490
B.3	Linear operators . . . . .	493
B.3.1	Kernel representations . . . . .	494
B.3.2	Unitary operators . . . . .	494
B.4	Regularization . . . . .	496
B.5	Expectation operator . . . . !	499
B.6	Some special functions * . . . . .	501
