Contents

List of Tables	xi
List of Figures	xvii
List of Color Plates	xxi
Acknowledgments	xxiii
1 Introduction	1
1.1 Tail Risk	7
1.2 Nonlinear Risks	13
1.3 Illiquidity and Serial Correlation	25
1.4 Literature Review	30
2 Basic Properties of Hedge Fund Returns	34
2.1 CS/Tremont Indexes	37
2.2 Lipper TASS Data	40
2.3 Attrition Rates	43
3 Serial Correlation, Smoothed Returns, and Illiquidity	64
3.1 An Econometric Model of Smoothed Returns	66
3.2 Implications for Performance Statistics	70
3.3 Estimation of Smoothing Profiles	75
3.4 Smoothing-Adjusted Sharpe Ratios	79
3.5 Empirical Analysis of Smoothing and Illiquidity	83
4 Optimal Liquidity	97
4.1 Liquidity Metrics	98
4.2 Liquidity-Optimized Portfolios	105
4.3 Empirical Examples	107
4.4 Summary and Extensions	117

5	Hedge Fund Beta Replication	121
5.1	Literature Review	123
5.2	Two Examples	124
5.3	Linear Regression Analysis	126
5.4	Linear Clones	138
5.5	Summary and Extensions	164
6	A New Measure of Active Investment Management	168
6.1	Literature Review	170
6.2	The AP Decomposition	172
6.3	Some Analytical Examples	181
6.4	Implementing the AP Decomposition	186
6.5	An Empirical Application	193
6.6	Summary and Extensions	197
7	Hedge Funds and Systemic Risk	198
7.1	Measuring Illiquidity Risk	200
7.2	Hedge Fund Liquidations	203
7.3	Regime-Switching Models	211
7.4	The Current Outlook	215
8	An Integrated Hedge Fund Investment Process	217
8.1	• Define Asset Classes by Strategy	221-
8.2	Set Portfolio Target Expected Returns	222
8.3	Set Asset-Class Target Expected Returns and Risks	222
8.4	Estimate Asset-Class Covariance Matrix	223
8.5	Compute Minimum-Variance Asset Allocations	224
8.6	Determine Manager Allocations within Each Asset Class	225
8.7	Monitor Performance and Risk Budgets	227
8.8	The Final Specification	227
8.9	Risk Limits and Risk Capital	229
8.10	Summary and Extensions	235
9	Practical Considerations	237
9.1	Risk Management as a Source of Alpha	237
9.2	Risk Preferences	239
9.3	Hedge Funds and the Efficient Markets Hypothesis	242
9.4	Regulating Hedge Funds	250

10	What Happened to the Quants in August 2007?	255
I	O.I Terminology	260
10.2	Anatomy of a Long/Short Equity Strategy	261
10.3	What Happened in August 2007?	269
10.4	Comparing August 2007 with August 1998	273
10.5	Total Assets, Expected Returns, and Leverage	276
10.6	The Unwind Hypothesis	281
10.7	Illiquidity Exposure	284
10.8	A Network View of the Hedge Fund Industry	286
10.9	Did Quant Fail?	292
10.10	Qualifications and Extensions	298
10.11	The Current Outlook	300
11	Jumping the Gates	303
11.1	Linear Risk Models	305
11.2	Beta Overlays	308
11.3	Hedging Long/Short Equity Managers	310
11.4	Dynamic Implementations of Beta Overlays	317
11.5	Conclusion	319
Appendix		323
A.1	Lipper TASS Category Definitions	323
A.2	CS/Tremont Category Definitions	325
A.3	Matlab Loeb Function <code>tloeb</code>	328
A.4	GMM Estimators for the AP Decomposition	330
A.5	Constrained Optimization	332
A.6	A Contrarian Trading Strategy	333
A.7	Statistical Significance of Aggregate Autocorrelations	334
A.8	Beta-Blocker and Beta-Repositioning Strategies	335
A.9	Tracking Error	339
