xx ـــــــــــــــــــــــــــــــــــ			
Prefa	Preface		
1.	Introducing theADO.NET Entity Framework	1	
	The Entity Relationship Model: Programming Against a Model,		
	Not the Database	2	
	The Entity Data Model: A Client-Side Data Model	3	
	Entities: Blueprints for Business Classes	6	
	The Backend Database: Your Choice	7	
	Database Providers	8	
	Access and ODBC	9	
	Entity Framework Features: APIs and Tools	9	
	Metadata	10	
	Entity Data Model Design Tools	10	
	Object Services	11	
	POCO Support	12	
	Change Tracking	12	
	Relationship Management and Foreign Keys	13	
	Data Binding	13	
	n-Tier Development	14	
	EntityClient	14	
	The Entity Framework and WCF Services	15	
	What About ADO.NET DataSets and LINQ to SQL?	15	
	DataSets	15	
	LINQ to SQL	16	
	Entity Framework Pain Points Are Fading Away	16	
	Programming the Entity Framework	17	
2.	Exploring the Entity Data Model.		
	Why Use an Entity Data Model?	19	

The EDM Within the Entity Framework	20
Walkthrough: Building Your First EDM	21
Inspecting the EDM in the Designer Window	24
Entity Container Properties	26
Entity Properties	26
Entity Property Properties	27
The Model's Supporting Metadata	29
Viewing the Model in the Model Browser	31
Viewing the Model's Raw XML	31
CSDL: The Conceptual Schema	33
EntityContainer	34
EntitySet	35
EntityType	36
Associations	38
Navigation Property	41
Navigation Properties That Return Collections	42
SSDL: The Store Schema	43
MSL: The Mappings	45
Database Views in the EDM	46
Summary	47
Quarving Entity Data Models	40
Querying Enury Data models.	
Vour Eirst EDM Query	49
Where Did the Context and Classes Come From?	51
Ouerving with LINO to Entition	55
Writing Your First LINO to Entition Query	55
Overving with Object Services and Entity SOL	55
Why Another Way to Query?	57
Entity SOI	58
The Parameterized ObjectOuery	50
Ouerving with Methods	61
Querying with LINO Methods	61
Querying with Ouery Builder Methods and Entity SOL	64
The Shortest Query Bunder Methods and Energy SQL	66
ObjectOuery, ObjectSet, and LINO to Entities	66
Ouerving with EntityClient to Return Streamed Data	68
EntityConnection and the Connection String	70
EntityCommand	71
ExecuteReader	71
Forward-Only Access to the Fields	71
Translating Entity Queries to Database Queries	71

	Avoiding Inadvertent Query Execution	74
	Summary	75
4.	Exploring LINQ to Entities in Greater Depth	
	Getting Ready with Some New Lingo	78
	Projections in Queries	78
	Projections in LINQ to Entities	79
	VB and C# Syntax Differences	79
	LINQ Projections and Special Language Features	80
	Projections with LINQ Query Methods	84
	Using Navigations in Queries	84
	Navigating to an EntityReference	84
	Filtering and Sorting with an EntityReference	86
	Navigating to Entity Collections	86
	Projecting Properties from EntityCollection Entities	87
	Filtering and Sorting with EntityCollections	88
	Aggregates with EntityCollections	88
	Aggregates in LINQ Methods	89
	Joins and Nested Queries	90
	Joins	90
	Nested Queries	91
	Grouping*	93
	Naming Properties When Grouping	94
	Chaining Aggregates	95
	Filtering on Group Conditions	95
	Shaping Data Returned by Queries	97
	Limiting which Related Data is Returned	99
	Loading Related Data	100
	Controlling Lazy Loading	101
	Explicitly Loading Entity Collections and Entity References	101
	Using the include Method to Eager-Load	105
	Pros and Cons of Load and Include Detrieving a Single Entity	100
	Potrioving a Single Entity with CotObjectByKey	107
	Finding More Overy Samples	100
	Summary	109
	Summary	109
5.	Exploring Entity SQL in Greater Depth.	
	Literals in Entity SQL	111
	Expressing a DateTime Literal	112
	Expressing a Decimal Literal	112
	Using Additional Literal Types	112
	Projecting in Entity SQL "	113

	DbDataRecords and Nonscalar Properties	114
	Projecting with Query Builder Methods	115
	Using Navigation in Entity SQL Queries	115
	Navigating to an EntityReference	115
	Filtering and Sorting with an EntityReference	116
	Filtering and Sorting with EntityCollections	116
	Aggregating with EntityCollections	117
	Using Entity SQL SET Operators	117
	Aggregating with Query Builder Methods	118
	Using Joins	118
	Nesting Queries	119
	Grouping in Entity SQL	120
	Returning Entities from an Entity SQL GROUP BY Query	121
	Filtering Based on Group Properties	121
	Shaping Data with Entity SQL	122
	Using Include with an ObjectQuery and Entity SQL	123
	Understanding Entity SQL's Wrapped and Unwrapped Results	124
	Entity SQL Rules for Wrapped and Unwrapped Results	126
	Digging a Little Deeper into EntityClient's Results	126
	Summary	127
6.	Modifying Entities and Saving Changes.	
	Keeping Track of Entities	129
	Managing an Entity's State	130
	Saving Changes Back to the Database	131
	Inserting New Objects	134
	Inserting New Parents and Children	135
	Deleting Entities	137
	Summary	139
7.	Using Stored Procedures with the EDM.	
	Updating the Model from a Database	142
	Working with Functions	143
	Function Attributes	144
	Mapping Functions to Entities	146
	Mapping Insert, Update, and Delete Functions to an Entity	148
	Inspecting Mappings in XML	152
	Using Mapped Functions	153
	Using the EDM Designer Model Browser to Import Additional	
	Functions into Your Model	155
	Mapping the First of the Read Stored Procedures: ContactsbyState	156
	Using Imported Functions	158
	Avoiding Inadvertent Client-Side Processing	159

	Mapping a Function to a Scalar Type	159
	Mapping a Function to a Complex Type	160
	Summary	163
8.	Implementing a More Real-World Model.	
	Introducing the BreakAway Geek Adventures Business Model	
	and Legacy Database	166
	Creating a Separate Project for an EDM	168
	Inspecting and Cleaning Up a New EDM	168
	Modifying the Names of Entities and Properties	170
	Resolving Collisions Between Property Names and Entity Names	172
	Cleaning Up Navigation Property Names	172
	Setting Default Values	174
	Mapping Stored Procedures	175
	Using the Use Original Value Checkbox in Update Mappings	176
	Working with Many-to-Many Relationships	178
	Inspecting the Completed BreakAway Model	181
	Building the BreakAway Model Assembly	182
	Looking at the Compiled Assembly	183
	Splitting Out the Model's Metadata Files	184
	Summary	185
9.	Data Binding with Windows Forms and WPF Applications.	
9.	Data Binding with Windows Forms and WPF Applications	187 187
9.	Data Binding with Windows Forms and WPF Applications Data Binding with Windows Forms Applications Creating a Windows Forms Application	
9.	Data Binding with Windows Forms and WPF Applications Data Binding with Windows Forms Applications Creating a Windows Forms Application Using Windows Forms Data Sources	187 187 188 189
9.	Data Binding with Windows Forms and WPF Applications Data Binding with Windows Forms Applications Creating a Windows Forms Application Using Windows Forms Data Sources Creating an Object Data Source for a Customer Entity	
9.	Data Binding with Windows Forms and WPF Applications Data Binding with Windows Forms Applications Creating a Windows Forms Application Using Windows Forms Data Sources Creating an Object Data Source for a Customer Entity Getting an Entity's Details onto a Form	
9.	Data Binding with Windows Forms and WPF Applications Data Binding with Windows Forms Applications Creating a Windows Forms Application Using Windows Forms Data Sources Creating an Object Data Source for a Customer Entity Getting an Entity's Details onto a Form Adding Code to Query an EDM When a Form Loads	
9.	Data Binding with Windows Forms and WPF Applications. Data Binding with Windows Forms Applications Creating a Windows Forms Application Using Windows Forms Data Sources Creating an Object Data Source for a Customer Entity Getting an Entity's Details onto a Form Adding Code to Query an EDM When a Form Loads Binding Without a BindingSource	
9.	Data Binding with Windows Forms and WPF Applications. Data Binding with Windows Forms Applications Creating a Windows Forms Application Using Windows Forms Data Sources Creating an Object Data Source for a Customer Entity Getting an Entity's Details onto a Form Adding Code to Query an EDM When a Form Loads Binding Without a BindingSource Adding an EntityCollection to the Form	
9.	Data Binding with Windows Forms and WPF Applications. Data Binding with Windows Forms Applications Creating a Windows Forms Application Using Windows Forms Data Sources Creating an Object Data Source for a Customer Entity Getting an Entity's Details onto a Form Adding Code to Query an EDM When a Form Loads Binding Without a BindingSource Adding an EntityCollection to the Form Displaying the Properties of Related Data in the Grid	
9.	Data Binding with Windows Forms and WPF Applications. Data Binding with Windows Forms Applications Creating a Windows Forms Application Using Windows Forms Data Sources Creating an Object Data Source for a Customer Entity Getting an Entity's Details onto a Form Adding Code to Query an EDM When a Form Loads Binding Without a BindingSource Adding an EntityCollection to the Form Displaying the Properties of Related Data in the Grid Allowing Users to Edit Data	
9.	Data Binding with Windows Forms and WPF Applications. Data Binding with Windows Forms Applications Creating a Windows Forms Application Using Windows Forms Data Sources Creating an Object Data Source for a Customer Entity Getting an Entity's Details onto a Form Adding Code to Query an EDM When a Form Loads Binding Without a BindingSource Adding an EntityCollection to the Form Displaying the Properties of Related Data in the Grid Allowing Users to Edit Data Editing Navigation Properties (and Shrinking the Query)	
9.	Data Binding with Windows Forms and WPF Applications. Data Binding with Windows Forms Applications Creating a Windows Forms Application Using Windows Forms Data Sources Creating an Object Data Source for a Customer Entity Getting an Entity's Details onto a Form Adding Code to Query an EDM When a Form Loads Binding Without a BindingSource Adding an EntityCollection to the Form Displaying the Properties of Related Data in the Grid Allowing Users to Edit Data Editing Navigation Property TextBoxes with ComboBoxes	
9.	Data Binding with Windows Forms and WPF Applications. Data Binding with Windows Forms Applications Creating a Windows Forms Application Using Windows Forms Data Sources Creating an Object Data Source for a Customer Entity Getting an Entity's Details onto a Form Adding Code to Query an EDM When a Form Loads Binding Without a BindingSource Adding an EntityCollection to the Form Displaying the Properties of Related Data in the Grid Allowing Users to Edit Data Editing Navigation Properties (and Shrinking the Query) Replacing the Navigation Property TextBoxes with ComboBoxes Adding New Customers	
9.	Data Binding with Windows Forms and WPF Applications.Data Binding with Windows Forms ApplicationsCreating a Windows Forms ApplicationUsing Windows Forms Data SourcesCreating an Object Data Source for a Customer EntityGetting an Entity's Details onto a FormAdding Code to Query an EDM When a Form LoadsBinding Without a BindingSourceAdding an EntityCollection to the FormDisplaying the Properties of Related Data in the GridAllowing Users to Edit DataEditing Navigation Properties (and Shrinking the Query)Replacing the Navigation Property TextBoxes with ComboBoxesAdding New CustomersDeleting Reservations	
9.	Data Binding with Windows Forms and WPF Applications.Data Binding with Windows Forms ApplicationsCreating a Windows Forms Data SourcesCreating an Object Data Source for a Customer EntityGetting an Entity's Details onto a FormAdding Code to Query an EDM When a Form LoadsBinding Without a BindingSourceAdding an EntityCollection to the FormDisplaying the Properties of Related Data in the GridAllowing Users to Edit DataEditing Navigation Properties (and Shrinking the Query)Replacing the Navigation Property TextBoxes with ComboBoxesAdding New CustomersDeleting ReservationsData Binding with WPF Applications	
9.	Data Binding with Windows Forms and WPF Applications.Data Binding with Windows Forms ApplicationCreating a Windows Forms Data SourcesCreating an Object Data Source for a Customer EntityGetting an Entity's Details onto a FormAdding Code to Query an EDM When a Form LoadsBinding Without a BindingSourceAdding an EntityCollection to the FormDisplaying the Properties of Related Data in the GridAllowing Users to Edit DataEditing Navigation Properties (and Shrinking the Query)Replacing the Navigation Property TextBoxes with ComboBoxesAdding New CustomersDeleting ReservationsData Binding with WPF ApplicationsCreating the WPF Form	
9.	Data Binding with Windows Forms and WPF Applications.Data Binding with Windows Forms ApplicationCreating a Windows Forms Data SourcesCreating an Object Data Source for a Customer EntityGetting an Entity's Details onto a FormAdding Code to Query an EDM When a Form LoadsBinding Without a BindingSourceAdding an EntityCollection to the FormDisplaying the Properties of Related Data in the GridAllowing Users to Edit DataEditing Navigation Properties (and Shrinking the Query)Replacing the Navigation Property TextBoxes with ComboBoxesAdding New CustomersDeleting ReservationsData Binding with WPF ApplicationsCreating the WPF FormCreating the WPF Project	
9.	Data Binding with Windows Forms and WPF Applications.Data Binding with Windows Forms ApplicationCreating a Windows Forms Data SourcesCreating an Object Data Source for a Customer EntityGetting an Entity's Details onto a FormAdding Code to Query an EDM When a Form LoadsBinding Without a BindingSourceAdding an EntityCollection to the FormDisplaying the Properties of Related Data in the GridAllowing Users to Edit DataEditing Navigation Properties (and Shrinking the Query)Replacing the Navigation Property TextBoxes with ComboBoxesAdding New CustomersDeleting ReservationsData Binding with WPF ApplicationsCreating the WPF FormCreating the WPF ProjectAdding the Necessary Data Source Objects	
9.	Data Binding with Windows Forms and WPF Applications.Data Binding with Windows Forms ApplicationUsing Windows Forms Data SourcesCreating an Object Data Source for a Customer EntityGetting an Entity's Details onto a FormAdding Code to Query an EDM When a Form LoadsBinding Without a BindingSourceAdding an EntityCollection to the FormDisplaying the Properties of Related Data in the GridAllowing Users to Edit DataEditing Navigation Properties (and Shrinking the Query)Replacing the Navigation Property TextBoxes with ComboBoxesAdding New CustomersDeleting ReservationsData Binding with WPF ApplicationsCreating the WPF FormCreating the WPF ProjectAdding the Necessary Data Source ObjectsInspecting the XAML and Code Generated by the Automated	

	Adding Code to Query the EDM When the Window Loads	216
	Customizing the Display of the Controls	218
	Selecting an Entity and Viewing Its Details	219
	Adding Another EntityCollection to the Mix	222
	Editing Entities and Their Related Data	224
	Using SortDescriptions to Keep Sorting in Sync with Data Modifica-	
	tions	225
	Adding Items to the Child EntityCollection	226
	The Last Task: Adding New Trips to the Catalog	227
	Summary	230
10.	Working with Object Services.	231
	Where Does Object Services Fit into the Framework?	231
	Processing Queries	233
	Parsing Queries: From Query to Command Tree to SQL	234
	Understanding Query Builder Methods	235
	Analyzing a Query with ObjectQuery Methods and Properties	238
	Executing Queries with ToList, ToArray, First or Single	241
	Executing Queries with the Execute Method	242
	Overriding a Default Connection with ObjectContext.Connection	242
	Handling Command Execution with EntityClient	244
	Materializing Objects	244
	Managing Object State	246
	Using EntityKey to Manage Objects	246
	Merging Results into the Cache with MergeOptions	247
	Inspecting ObjectStateEntry	248
	Maintaining EntityState	249
	Managing Relationships	252
	Attaching and Detaching Objects from the ObjectContext	253
	Taking Control of ObjectState	257
	ObjectStateManager Methods	257
	ObjectStateEntry State Methods for Managing State	258
	ObjectSet State Methods	259
	Sending Changes Back to the Database	259
	ObjectContext.SaveChanges	259
	Affecting SaveChanges Default Behavior	260
	Overriding SaveChanges Completely	261
	Data Validation with the SavingChanges Event	261
	Concurrency Management	261
	Transaction Support	262
	Implementing Serialization, Data Binding, and More	263
	Object Services Supports XML and Binary Serialization	263
	Object Services Supports Data Binding	265

11.	Customizing Entities	
	Partial Classes	267
	Using Partial Methods	269
	The OnContextCreated Method	269
	The On [Property] Changed and On [Property] Changing Methods	271
	Using PropertyChanged to Calculate Database-Computed Columns	
	Locally	273
	Subscribing to Event Handlers	274
	The ObjectContext.ObjectMaterialized Event	275
	The ObjectContext.SavingChanges Event	276
	The EntityObject.PropertyChanging	
	and EntityObject.PropertyChanged Events	280
	The AssociationChanged Event	282
	Creating Your Own Partial Methods and Properties	284
	Overriding the Object Constructor	284
	Overriding ObjectContext.SaveChanges	285
	Creating Custom Properties	286
	Overloading Entity Creation Methods	289
	Using Partial Classes for More Than Just Overriding Methods	
	and Events	290
	Overriding Default Code Generation	291
	Switching to a Template	292
	Reading the Template	292
	Modifying the Template	293
	Customizing a Template for Major Class Modifications	295
	Switching Between the Default Template and a Custom Template	295
	Summary	296
12.	Data Binding with RAD ASP.NET Applications.	297
	Using the EntityDataSource Control to Access Flat Data	298
	Creating the Hello Entities Project	298
	Creating a GridView and an EntityDataSource Concurrently	299
	Configuring an EntityDataSource with Its Wizard	299
	Formatting the GridView	301
	Testing the Web Application	303
	Understanding How the EntityDataSource Retrieves and Updates	
	Your Data	304
	EntityDataSource and Its Query	304
	EntityDataSource and Its ObjectContext	305
	EntityDataSource Context Events	306
	EntityDataSource and ViewState -	306

	Accessing Foreign Keys When There Is No Foreign Key Property	308
	Working with Related EntityReference Data	309
	Using EntityDataSource.Include to Get Related Data	309
	Displaying Data That Comes from EntityReference	
	Navigation Properties	310
	Using a New EntityDataSource Control to Enable Editing	
	of EntityReference Navigation Properties	312
	Editing EntityReferences That Cannot Be Satisfied	
	with a Drop-Down List	313
	Binding an EntityDataSource to Another Control	
	with WhereParameters	314
	Editing Related Data Concurrently with Multiple	
	EntityDataSource Controls	316
	Working with Hierarchical Data in a Master/Detail Form	317
	Setting Up the Web Application	317
	Specifying Your Own Entity SQL Query Expression	
	for an EntityDataSource	318
	Binding a DropDownList to an EntityDataSource Control	319
	Creating a Parent EntityDataSource That Is Controlled	
	by the DropDownList and Provides Data to a DetailsView	320
	Using the EntityDataSource.Where Property to Filter Query Results	321
	. Displaying Read-Only Child Data Through the Parent	
	EntityDataSource	321
	Using a New EntityDataSource to Add a Third Level of Hierarchical	
	Data to the Master/Detail Form	323
	Using the EntityDataSource.Inserting Event to Help with Newly	
	Added Entities	325
	Testing the Application	326
	Exploring EntityDataSource Events	327
	Building Dynamic Data Websites	329
	Summary	332
13.	Creating and Using POCO Entities	335
	Creating POCO Classes	336
	Creating an ObjectContext Class to Manage the POCOs	339
	Change Tracking with POCOs	341
	Understanding the Importance of DetectChanges	341
	Loading Related Data with POCOs	3/1
	Loading from the Context	341
	Loading from a Dynamic Provy	242
	Exploring and Correcting POCOs' Impact on Two Way Polationshing	242
	Light the Detect Changes Method to Fix Palationships	2/2
	Enabling Classes to Eix Their Over Deletionshing	243 244
	Enabling Classes to Fix Their Own Kelationships	344

	Using Proxies to Enable Change Notification, Lazy Loading,	
	and Relationship Fix-Up	345
	Change Notification by Proxy	346
	Lazy Loading by Proxy	346
	Exploring the Proxy Classes	347
	Synchronizing Relationships by Proxy	348
	Using T4 to Generate POCO Classes	350
	Modifying the POCO Template	354
	Creating a Model That Works with Preexisting Classes	358
	Code First: Using Entity Framework with No Model at All	359
	Summary	359
14.	Customizing Entity Data Models Using the EDM Designer.	361
	Mapping Table per Type Inheritance for Tables That Describe	
	Derived Types	362
	Mapping TPT Inheritance	363
	Querying Inherited Types	365
	POCO Classes and Inherited Objects	366
	Inserting TPT Inherited Types	366
	Specifying or Excluding Derived Types in Queries	368
	Creating New Derived Entities When the Base Entity Already Exists	370
	TPT with Abstract Types	371
	Mapping Unique Foreign Keys	373
	Mapping an Entity to More Than One Table	375
	Merging Multiple Entities into One	376
	Querying, Editing, and Saving a Split Entity	379
	Mapping Stored Procedures to Split Tables and More	380
	Splitting a Single Table into Multiple Entities	381
	Filtering Entities with Conditional Mapping	384
	Creating a Conditional Mapping for the Activity Entity	385
	Querying, Inserting, and Saving with Conditional Mappings	387
	Filtering on Other Types of Conditions	388
	Removing the Conditional Mapping from Activity and Re-creating	
	the Category Property	388
	Implementing Table per Hierarchy Inheritance for Tables That Contain	
	Multiple Types	389
	Creating the Resort Derived Type	390
	Setting a Default (Computed) Value on the Table Schema	391
	Testing the TPH Mapping	392
	Choosing to Turn a Base Class into an Abstract Class	393
	Creating Complex Types to Encapsulate Sets of Properties	393
	Defining a Complex Type	394
	Reusing Complex Types -	397

	Querying, Creating, and Saving Entities That Contain Complex Types	397
	Removing the Complex Types from the Model	399
	Using Additional Customization Options	399
	Using GUIDs for EntityKeys	399
	Mapping Stored Procedures	399
	Mapping Multiple Entity Sets per Type	400
	Mapping Self-Referencing Associations	400
	Summary	401
15.	Defining EDM Mappings That Are Not Supported by the Designer	.403
	Using Model-Defined Functions	403
	Using Model-Defined Functions to Return More Complex Results	407
	Consuming the Complex Results	408
	Reading the Results from a Complex Function	408
	Mapping Table per Concrete (TPC) Type Inheritance for Tables	
	with Overlapping Fields	409
	Using QueryView to Create Read-Only Entities and Other Specialized	
	Mappings	411
	Finding a Common Use Case for QueryView	413
	Creating a CustomerNameAndID Entity	413
	Creating a QueryView Mapping for CustomerNameAndID	414
	Testing the QueryView	416
	Deconstructing the QueryView	416
	Summary	417
16.	Gaining Additional Stored Procedure and View Support in the Raw XML.	.419
	Reviewing Procedures, Views, and UDFs in the EDM	419
	Working with Stored Procedures That Return Data	420
	Using Functions That Match an Entity Whose Property Names Have	
	Been Changed	420
	Query Stored Procedures and Inherited Types	421
	Composing Queries Against Functions	423
	Replacing Stored Procedures with Views for Composability	423
	Queries That Return Multiple Result Sets	424
	Executing Queries on Demand with ExecuteStoreQuery	424
	Querying to a Class That Is Not an Entity	424
	Querying into an Entity	425
	Adding Native Queries to the Model	426
	Defining a Complex Type in the Model Browser	427
	Adding Native Views to the Model	429
	DefiningQuery Is Already in Your Model	429
	Using DefiningQuery to Create Your Own Views	431
	Implementing a DefiningQuery-	433

	Creating Associations with the New Entity	437
	Using DefiningQuery to Solve More Complex Problems	438
	Using Commands That Affect the Database	440
	Executing SQL on the Fly with ExecuteStoreCommand	440
	Using Functions to Manipulate Data in the Database	441
	Mapping Insert/Update/Delete to Types Within an Inheritance Structure	444
	What If Stored Procedures Affect Multiple Entities in an Inheritance	
	Structure?	445
	Implementing and Querying with User-Defined Functions (UDFs)	445
	Summary	447
17.	Using EntityObjects in WCF Services.	. 449
	Planning for an Entity Framework—Agnostic Client	450
	Assessing the Pros and Cons of an Entity Framework-Agnostic	
	Consumer	451
	Building a Simple WCF Service with EntityObjects	452
	Creating the Service	453
	Defining the Service Operations	454
	Defining Extra Service Classes	455
	Exposing Custom Properties	456
	Implementing the Service Interface	457
	Adding Graphs to ObjectContext	460
	Deleting Objects	461
	Updating the Object Graph	462
	Client Rules for Identifying Changes in an EntityCollection	463
	The UpdateCustomer Method	463
	Handling New and Existing Reservations	465
	Deleting Reservations	465
	Building a Simple Console App to Consume an EntityObject Service	467
	Enabling the Client Application to Receive Large Messages	
	from the Service	468
	Creating Methods to Test the Service Operations	469
	Analyzing the GetAndUpdateCustomer Method	473
	Testing Out the Other Service Operations	4/4
	Creating WCF Data Services with Entities	4/4
	Putting WCF Data Services in Perspective	4/4
	Creating a wCF Data Service	4/5
	Anticipating Exponentions	4/9
	Anucipating Exceptions	480
	Exposing Kelaled Data Through the Service Propering for WCE Data Services' Limitations	401
	Modifying Data Through a Service	403 191
	Mountying Data Through a Service	404
	Learning wore About Creating and Consuming wCF Data Services	400

	Understanding How WCF RIA Services Relates to the Entity Framework Summary	485 487
	, , , , , , , , , , , , , , , , , , ,	
18.	Using POCOs and Self-Tracking Entities in WCF Services.	489
	Creating WCF-Friendly POCO Classes	490
	Updating the POCO Classes Based on the Current BreakAway Model	490
	Isolating the POCO Entities in Their Own Project	491
	Adding Custom Logic to the POCO Entities with a Base Class	493
	Following WCF Collection Rules	495
	Preventing Properties from Being Marked As Virtual	496
	Building a WCF Service That Uses POCO Classes	497
	Implementing the Interface	498
	Using the Service	501
	Using the Self-Tracking Entities Template for WCF Services	503
	Creating and Exploring the Self-Tracking Entities	504
	Putting the Change-Tracking Logic Where It's Needed	505
	Creating a WCF Service That Uses Self-Tracking Entities	506
	Watching Self-Tracking Entities Under the Covers	507
	Inspecting the Generated Context Class and Extensions	513
	Using POCO Entities with WCF Data and RIA Services	514
	Preparing for WCF Data Services	515
	-Using POCO Entities in WCF RIA Services	517
	Sorting Out the Many Options for Creating Services	519
	Summary	520
19.	Working with Relationships and Associations.	521
	Deconstructing Relationships in the Entity Data Model	522
	Understanding How the Entity Data Model Wizard Creates	
	the Association	523
	Understanding Additional Relationship Items	525
	Handling Nonessential Navigation Properties	526
	Understanding the Major Differences Between Foreign Key Associations	
	and Independent Associations	527
	Defining Associations in Metadata	528
	Detecting Associations at Runtime	528
	Deconstructing Relationships Between Instantiated Entities	529
	Understanding Relationship Manager and the IRelatedEnd Interface	530
	Late-Binding Relationships	530
	Taking a Peek Under the Covers: How Entity Framework	
	Manages Relationships	531
	Understanding Navigation Properties	534
	Understanding Referential Integrity and Constraints	537
	Implementing Deletes and Cascading Deletes	540

	Defining Relationships Between Entities	542
	The CLR Way: Setting a Navigation Property to an Entity	543
	Setting a Foreign Key Property	544
	Setting an EntityReference Using an EntityKey	544
	Loading, Adding, and Attaching Navigation Properties	545
	Lazy Loading	545
	EntityReference.Load and EntityCollection.Load	547
	Loading from Detached Entities: Lazy and Explicit	547
	Using EntityCollection.Add	548
	Using Attach and Remove	549
	Moving an Entity to'a New Graph	550
	Learning a Few Last Tricks to Make You a Relationship Pro	551
	Using CreateSourceQuery to Enhance Deferred Loading	551
	Getting a Foreign Key Value in an Independent Association	552
	Summary	553
20.	Real World Apps: Connections, Transactions, Performance, and More	
	Entity Framework and Connections	555
	Overriding EntityConnection Defaults	556
	Working with Connection Strings Programmatically	557
	Opening and Closing Connections	560
	Getting the Store Connection from EntityConnection	562
	Disposing Connections	562
	Pooling Connections	563
	Fine-Tuning Transactions	564
	Why Use Your Own Transaction?	564
	Understanding Implicit Entity Framework Transactions	565
	Specifying Your Own Read/Write Transactions	566
	Specifying Your Own Read-Only Transactions	569
	Rolling Back Transactions	570
	Understanding Security	571
	Guarding Against SQL Injection	571
	Guarding Against Connection Piggybacks	573
	Fine-Tuning Performance	574
	Measuring Query Performance	575
	Measuring Startup Performance	579
	Reducing the Cost of Query Compilation	580
	Caching for Entity SQL Queries	580
	Precompiling Views for Performance	582
	Precompiling LINQ to Entities Queries for Performance	585
	Fine-Tuning Updates for Performance?	589
	Lacking Support for Full Text Searches	590
	Exploiting Multithreaded Applications .	591

	Forcing an ObjectContext to Use Its Own Thread	591
	Implementing Concurrent Thread Processing	593
	Exploiting .NET 4 Parallel Computing	596
	Summary	596
21.	Manipulating Entities with ObjectStateManager and MetadataWorkspace.	
	Manipulating Entities and Their State with ObjectStateManager	598
	Refreshing Your High-Level Understanding of ObjectStateEntry	599
	Getting an ObjectStateManager and Its Entries	599
	Building Extension Methods to Overload GetObjectStateEntries	600
	Building a Method to Return Managed Entities	602
	Using GetObjectStateEntry and TryGetObjectStateEntry	603
	Mining Entity Details from ObjectStateEntry	604
	Leveraging the ObjectStateManager During Saves	609
	Using ObjectStateManager to Build an EntityState Visualizer	611
	Retrieving an ObjectStateEntry Using an EntityKey	612
	Reading the OriginalValues and CurrentValues of an	
	ObjectStateEntry	613
	Determining Whether a Property Has Been Modified	614
	Displaying the State and Entity Type	614
	Getting ComplexType Properties Out of ObjectStateEntry	615
	Modifying Values with ObjectStateManager	619
	Working with Relationships in ObjectStateManager	620
	Using the MetadataWorkspace	622
	Loading the MetadataWorkspace	622
	Clearing the MetadataWorkspace from Memory	623
	Understanding the MetadataWorkspace ItemCollections	624
	Retrieving Metadata from the MetadataWorkspace	625
	Querying the Metadata with LINQ to Objects	628
	Building Dynamic Queries and Reading Results	629
	Building Entity SQL Queries Dynamically Using Metadata	629
	Creating Queries on the Fly with CreateObjectSet and Query	
	Builder Methods	632
	Reading the Results of a Dynamically Created Query	634
	Creating and Manipulating Entities Dynamically	637
	Creating EntityObjects Without Entity Classes	637
	Creating Entities and Graphs Dynamically	640
	Summary	643
22.	Handling Exceptions.	
	Preparing for Exceptions	645
	Handling EntityConnectionString Exceptions	647

	Connection String Can't Be Found or Is Improperly Configured:	
	System. ArgumentException	648
	Metadata Files Cannot Be Found: System.Data.MetadataException	648
	Handling Connection String Exceptions	649
	Handling Query Compilation Exceptions	649
	Invalid LINQ to Entities Query Expressions:	
	System.NotSupportedException	649
	Invalid Entity SQL Query Expressions: EntitySqlException	650
	EntityCommandCompilationException Thrown by the Store	
	Provider	652
	Creating a Common Wrapper to Handle Query Execution Exceptions	652
	Handling Exceptions Thrown During SaveChanges Command Execution	654
	UpdateException: Thrown When Independent Association Mapping	
	Constraints Are Broken	654
	UpdateException: Thrown by Broken Constraints in the Database	655
	Relying on Entity Framework to Automatically Roll Back When an	
	UpdateException Occurs	656
	Gleaning Details from UpdateException	656
	Planning for Other Exceptions Related to the Entity Framework	657
	Handling Concurrency Exceptions	658
	Summary	658

	Refreshing Collections of Entities	673
	Refreshing Related Entities in a Graph	675
	Rewinding and Starting Again, and Maybe Again After That	676
	Reporting an Exception	678
	Handling Concurrency Exceptions at a Lower Level	678
	Handling Exceptions in a Granular Way Without User Intervention	678
	Handling Multiple Conflicts	680
	Handling Exceptions When Transactions Are Your Own	682
	Summary	683
24.	Building Persistent Ignorant, Testable Applications.	685
	Testing the BreakAway Application Components	686
	Getting Started with Testing	687
	Writing an Integration Test That Hits the Database	687
	Inspecting a Failed Test	689
	Writing a Unit Test That Focuses on Custom Logic	689
	Creating Persistent Ignorant Entities	693
	Planning the Project Structure	695
	Starting with the Model and Its POCO Entities	697
	Building an Interface to Represent a Context	698
	Modifying the BAEntities ObjectContext Class to Implement	
	. the New Interface	699
	Creating the IEntityRepository Interface	702
	Creating the Repository Classes	703
	Testing GetReservationsForCustomer Against the Database	706
	Creating a Fake Context	708
	Creating a FakeObjectSet Class	710
	Completing the Fake Context	712
	Building Tests That Do Not Hit the Database	714
	Adding Validation Logic to the POCO Class	714
	Adding Validation Logic to the Context	716
	Providing ManagedEntities in the FakeContext	716
	Hiding the Context from the Lower Layers with Unit of Work	718
	Testing UnitOfWork Against the Database	720
	Enabling Eager Loading in IContext	721
	Leveraging Precompiled Queries in Your Repositories	722
	Using the New Infrastructure in Your Application	723
	Adding a UI Layer That Calls the Repository	723
	Application Architecture Benefits from Designing Testable Code	724
	Considering Mocking Frameworks?	725
	Summary	725

25.	Domain-Centric Modeling.	727
	Creating a Model and Database Using Model First	728
	Creating a Conceptual Model in the Designer	728
	Creating the Entities	730
	Creating Association and Inheritance Hierarchies	734
	Generating Database Schema from the Model	738
	Creating the Database and Its Schema	744
	Overriding the DDL Generation	745
	Using the Feature CTP Code-First Add-On	747
	Understanding Code-First Design	749
	Installing the Feature CTP	751
	Exploring Some Configuration Examples	751
	Testing the Code-First Application and Database	753
	Using SQL Server Modeling's "M" Language	755
	Using M Metadata in Entity Framework Applications	758
	Summary	759
26.	Using Entities in Layered Client-Side Applications.	761
	Isolating the ObjectContext	762
	Freeing Entities from Change Tracking	764
	Enabling Change Tracking Across Tiers	766
	Moving Other ObjectContext-Dependent Logic to the DataBridge Ensuring That Lazy Loading Doesn't Negatively Impact the Layered	768
	Application	772
	Noting Additional Benefits of the Layered Application	773
	Separating Entity-Specific Logic from ObjectContext Logic	774
	Working with POCO Entities	778
	Providing EntityState	779
	Providing Logic in Place of Other EntityObject Behavior	781
	Summary	782
27.	Building Layered Web Applications.	783
	Understanding How ObjectContext Fits into the Web Page	
	Life Cycle	783
	Return Results, Not Queries, from the DataBridge Class	785
	Using Entities in Read-Only Web Pages	786
	Exploring Options for Updating Entities in an ASP.NET Web Forms	
	Application	788
	Comparing ASP.NET's State Solutions to the Needs of the Entity	
	Framework	789
	Building an N-Tier Web Forms Application	793
	Designing the Application	794
	Using the Existing Repositories "	795

	Building an Entity Manager to Act As a DataBridge	795
	Retrieving Data for Display and for Future Updates	797
	Making the Related Data Accessible to the Client	799
	Getting Data from the Manager to the Client	800
	Adding Lists for User Selection Controls	803
	Allowing a User to Modify Related Data	805
	Building an ASP.NET MVC Application	806
	Replacing the Context with Repositories	813
	Editing Entities and Graphs on an MVC Application	814
	Creating a Repository for Payments	817
	Interacting with the ReservationController	817
	Summary	818
A.	Entity Framework Assemblies and Namespaces.	821
В.	Data-Binding with Complex Types.	825
