Contents

I Single-Period Models

1	Utility Functions and Risk Aversion Coefficients	3
1.1	Uniqueness of Utility Functions	4
1.2	Concavity and Risk Aversion	4
1.3	Coefficients of Risk Aversion	5
1.4	Risk Aversion and Risk Premia	6
1.5	Constant Absolute Risk Aversion	8
1.6	Constant Relative Risk Aversion	10
1.7	Linear Risk Tolerance	10
1.8	Conditioning and Aversion to Noise	13
1.9	Notes and References	14
	Exercises	17
2	Portfolio Choice and Stochastic Discount Factors	21
2.1	The First-Order Condition	23
2.2	Stochastic Discount Factors	26
2.3	A Single Risky Asset	27
2.4	Linear Risk Tolerance	31
2.5	Constant Absolute Risk Aversion with Multivariate Normal Returns	34
2.6	Mean-Variance Preferences	36

2.7	Complete Markets	37
2.8	Beginning-of-Period Consumption	39
2.9	Time-Additive Utility	41
2.10	Notes and References	41
	Exercises	42
3	Equilibrium and Efficiency	47
3.1	Pareto Optima	47
3.2	Social Planner's Problem	48
3.3	Pareto Optima and Sharing Rules	49
3.4	Competitive Equilibria	50
3.5	Complete Markets	51
3.6	Linear Risk Tolerance	53
3.7	Beginning-of-Period Consumption	59
3.8	Notes and References	61
	Exercises	61
4	Arbitrage and Stochastic Discount Factors	65
4.1	Fundamental Theorem on Existence of Stochastic Discount Factors	65
4.2	Law of One Price and Stochastic Discount Factors	67
4.3	Risk-Neutral Probabilities	68
4.4	Projecting SDF's onto the Asset Span	68
4.5	Projecting onto a Constant and the Asset Span	71
4.6	Hansen–Jagannathan Bound with a Risk-Free Asset	72
4.7	Hansen–Jagannathan Bound with No Risk-Free Asset	73
4.8	Hilbert Spaces and Gram–Schmidt Orthogonalization	74
4.9	Notes and References	76
	Exercises	78
5	Mean-Variance Analysis	80
5.1	The Calculus Approach for Risky Assets	81
5.2	Two-Fund Spanning	82
5.3	The Mean-Standard Deviation Trade-Off	83
5.4	GMV Portfolio and Mean-Variance Efficiency	83
5.5	Calculus Approach with a Risk-Free Asset	84
5.6	Two-Fund Spanning Again	88
5.7	Orthogonal Projections and Frontier Returns	88
5.8	Risk-Free Return Proxies	91
5.9	Inefficiency of \tilde{R}_p	92
5.10	Hansen–Jagannathan Bound with a Risk-Free Asset	92
5.11	Frontier Returns and Stochastic Discount Factors	93
5.12	Separating Distributions	94
5.13	Notes and References	98
	Exercises	99

6	Beta Pricing Models	101
6.1	Beta Pricing	101
6.2	Single-Factor Models with Returns as Factors	103
6.3	The Capital Asset Pricing Model	105
6.4	Returns and Excess Returns as Factors	108
6.5	Projecting Factors on Returns and Excess Returns	109
6.6	Beta Pricing and Stochastic Discount Factors	111
6.7	Arbitrage Pricing Theory	112
6.8	Notes and References	116
	Exercises	118
7	Representative Investors	121
7.1	Pareto Optimality Implies a Representative Investor	122
7.2	Linear Risk Tolerance	123
7.3	Consumption-Based Asset Pricing	126
7.4	Pricing Options	127
7.5	Notes and References	130
	Exercises	130
II	Dynamic Models	
8	Dynamic Securities Markets	135
8.1	The Portfolio Choice Problem	136
8.2	Stochastic Discount Factor Processes	138
8.3	Self-Financing Wealth Processes	139
8.4	The Martingale Property	140
8.5	Transversality Conditions and Ponzi Schemes	142
8.6	The Euler Equation	143
8.7	Arbitrage and the Law of One Price	145
8.8	Risk-Neutral Probabilities	146
8.9	Complete Markets	148
8.10	Portfolio Choice in Complete Markets	150
8.11	Competitive Equilibria	151
8.12	Notes and References	152
	Exercises	154
9	Portfolio Choice by Dynamic Programming	157
9.1	Introduction to Dynamic Programming	157
9.2	Bellman Equation for Portfolio Choice	160
9.3	The Envelope Condition	161
9.4	Constant Relative Risk Aversion for Terminal Wealth	162
9.5	Constant Relative Risk Aversion for Intermediate Consumption	165
9.6	Constant Relative Risk Aversion with an Infinite Horizon	167

9.7	Notes and References	171
	Exercises	173
10	Conditional Beta Pricing Models	177
10.1	From Conditional to Unconditional Models	178
10.2	The Conditional Capital Asset Pricing Model	179
10.3	The Consumption-Based Capital Asset Pricing Model	181
10.4	The Intertemporal Capital Asset Pricing Model	183
10.5	An Approximate Capital Asset Pricing Model	187
10.6	Notes and References	187
	Exercises	188
11	Some Dynamic Equilibrium Models	189
11.1	Representative Investors	189
11.2	Valuing the Market Portfolio	190
11.3	The Risk-Free Return	192
11.4	The Equity Premium Puzzle	193
11.5	The Risk-Free Rate Puzzle	194
11.6	Uninsurable Idiosyncratic Income Risk	194
11.7	External Habits	198
11.8	Notes and References	201
	Exercises	202
12	Brownian Motion and Stochastic Calculus	204
12.1	Brownian Motion	204
12.2	Quadratic Variation	205
12.3	Itô Integral	207
12.4	Local Martingales and Doubling Strategies	208
12.5	Itô Processes	209
12.6	Asset and Portfolio Returns	210
12.7	Martingale Representation Theorem	212
12.8	Itô's Formula: Version I	212
12.9	Geometric Brownian Motion	216
12.10	Covariations of Itô Processes	218
12.11	Itô's Formula: Version II	219
12.12	Conditional Variances and Covariances	220
12.13	Transformations of Models	222
12.14	Notes and References	224
	Exercises	225
13	Securities Markets in Continuous Time	231
13.1	Dividend-Reinvested Asset Prices	231
13.2	Securities Markets	232

13.3	Self-Financing Wealth Processes	234
13.4	Conditional Mean-Variance Frontier	235
13.5	Stochastic Discount Factor Processes	236
13.6	Properties of Stochastic Discount Factor Processes	237
13.7	Sufficient Conditions for MW to be a Martingale	241
13.8	Valuing Consumption Streams	242
13.9	Risk Neutral Probabilities	243
13.10	Complete Markets	245
13.11	Markets without a Risk-Free Asset	246
13.12	Inflation and Foreign Exchange	247
13.13	Notes and References	248
	Exercises	249
14	Continuous-Time Portfolio Choice and Beta Pricing	256
14.1	<i>The Static Budget Constraint</i>	256
14.2	Complete Markets	257
14.3	Constant Capital Market Line	259
14.4	Dynamic Programming Example	260
14.5	General Markovian Portfolio Choice	263
14.6	The Consumption-Based Capital Asset Pricing Model	265
14.7	The Intertemporal Capital Asset Pricing Model	267
14.8	The Capital Asset Pricing Model	268
14.9	Infinite-Horizon Dynamic Programming	269
14.10	Value Function for Constant Relative Risk Aversion	269
14.11	Verification Theorem	271
14.12	Notes and References	273
	Exercises	275
III	Derivative Securities	
15	Option Pricing	283
15.1	Introduction to Options	284
15.2	Put-Call Parity and Option Bounds	286
15.3	Stochastic Discount Factor Processes	286
15.4	Changes of Measure	287
15.5	Market Completeness	289
15.6	The Black-Scholes Formula	290
15.7	Delta Hedging	293
15.8	The Fundamental Partial Differential Equation	296
15.9	American Options	297
15.10	Smooth Pasting	298
15.11	European Options on Dividend-Paying Assets	301
15.12	Notes and References	301
	Exercises	304

16	Forwards, Futures, and More Option Pricing	310
16.1	Forward Measures	310
16.2	Forward Contracts	311
16.3	Futures Contracts	313
16.4	Exchange Options	314
16.5	Options on Forwards and Futures	316
16.6	Dividends and Random Interest Rates	318
16.7	Implied Volatilities and Local Volatilities	319
16.8	Stochastic Volatility	321
16.9	Notes and References	325
	Exercises	326
17	Term Structure Models	334
17.1	Vasicek Model	335
17.2	Cox–Ingersoll–Ross Model	337
17.3	Multifactor Cox–Ingersoll–Ross Models	339
17.4	Affine Models	340
17.5	Completely Affine Models	342
17.6	Quadratic Models	343
17.7	Forward Rates	344
17.8	Fitting the Yield Curve	345
17.9	Heath–Jarrow–Morton Models	346
17.10	Notes and References	348
	Exercises	350
IV	Topics	
18	Heterogeneous Priors	357
18.1	State-Dependent Utility Formulation	358
18.2	Representative Investors in Complete Single-Period Markets	359
18.3	Representative Investors in Complete Dynamic Markets	361
18.4	Short Sales Constraints and Biased Prices	364
18.5	Speculative Trade	366
18.6	Notes and References	367
	Exercises	368
19	Asymmetric Information	371
19.1	The No-Trade Theorem	371
19.2	Normal–Normal Updating	373
19.3	A Fully Revealing Equilibrium	375
19.4	Noise Trading and Partially Revealing Equilibria	377
19.5	A Model with a Large Number of Investors	381
19.6	The Kyle Model	383

16	Forwards, Futures, and More Option Pricing	310
16.1	Forward Measures	310
16.2	Forward Contracts	311
16.3	Futures Contracts	313
16.4	Exchange Options	314
16.5	Options on Forwards and Futures	316
16.6	Dividends and Random Interest Rates	318
16.7	Implied Volatilities and Local Volatilities	319
16.8	Stochastic Volatility	321
16.9	Notes and References	325
	Exercises	326
17	Term Structure Models	334
17.1	Vasicek Model	335
17.2	Cox–Ingersoll–Ross Model	337
17.3	Multifactor Cox–Ingersoll–Ross Models	339
17.4	Affine Models	340
17.5	Completely Affine Models	342
17.6	Quadratic Models	343
17.7	Forward Rates	344
17.8	Fitting the Yield Curve	345
17.9	Heath–Jarrow–Morton Models	346
17.10	Notes and References	348
	Exercises	350
IV	Topics	
18	Heterogeneous Priors	357
18.1	State-Dependent Utility Formulation	358
18.2	Representative Investors in Complete Single-Period Markets	359
18.3	Representative Investors in Complete Dynamic Markets	361
18.4	Short Sales Constraints and Biased Prices	364
18.5	Speculative Trade	366
18.6	Notes and References	367
	Exercises	368
19	Asymmetric Information	371
19.1	The No-Trade Theorem	371
19.2	Normal–Normal Updating	373
19.3	A Fully Revealing Equilibrium	375
19.4	Noise Trading and Partially Revealing Equilibria	377
19.5	A Model with a Large Number of Investors	381
19.6	The Kyle Model	383

19.7	The Kyle Model in Continuous Time	387
19.8	Notes and References	390
	Exercises	392
20	Alternative Preferences in Single-Period Models	394
20.1	The Ellsberg Paradox	395
20.2	The Sure Thing Principle	396
20.3	Multiple Priors and Max-Min Utility	396
20.4	NonAdditive Set Functions	398
20.5	The Allais Paradox	399
20.6	The Independence Axiom	401
20.7	Betweenness Preferences	402
20.8	Rank-Dependent Preferences	406
20.9	First-Order Risk Aversion	408
20.10	Framing and Loss Aversion	409
20.11	Prospect Theory	410
20.12	Notes and References	410
	Exercises	411
21	Alternative Preferences in Dynamic Models	414
21.1	Recursive Preferences	416
21.2	Portfolio Choice with Epstein–Zin–Weil Utility	418
21.3	A Representative Investor with Epstein–Zin–Weil Utility	419
21.4	Internal Habits	421
21.5	Linear Internal Habits in Complete Markets	422
21.6	A Representative Investor with an Internal Habit	424
21.7	Keeping/Catching Up with the Joneses	426
21.8	Ambiguity Aversion in Dynamic Models	428
21.9	Notes and References	431
	Exercises	433
22	Production Models	437
22.1	Discrete-Time Model	438
22.2	Marginal q	439
22.3	Costly Reversibility	441
22.4	Project Risk and Firm Risk	442
22.5	Irreversibility and Options	446
22.6	Irreversibility and Perfect Competition	448
22.7	Irreversibility and Risk	449
22.8	Irreversibility and Perfect Competition: An Example	450
22.9	Notes and References	451
	Exercises	453

Appendices

A	Some Probability and Stochastic Process Theory	456
A.1	Random Variables	456
A.2	Probabilities	457
A.3	Distribution Functions and Densities	457
A.4	Expectations	458
A.5	Convergence of Expectations	459
A.6	Interchange of Differentiation and Expectation	459
A.7	Random Vectors	460
A.8	Conditioning	461
A.9	Independence	462
A.10	Equivalent Probability Measures	463
A.11	Filtrations, Martingales, and Stopping Times	464
A.12	Martingales under Equivalent Measures	464
A.13	Local Martingales	465
A.14	The Usual Conditions	465
	Bibliography	467
	Index	481
