<b>About the Authors</b>	<b>xi</b>
<b>Introduction</b>	<b>xiii</b>
<b>Part I THEORY</b>	<b>1</b>
<b>1 Mathematics in a Pill</b>	<b>3</b>
1.1 Probability Space and Random Variables	3
1.2 Normal Distributions	4
1.3 Stochastic Processes	4
1.4 Wiener Processes	5
1.5 Geometric Wiener Processes	5
1.6 Markov Processes	6
1.7 Stochastic Integrals and Stochastic Differential Equations	6
1.8 Ito's Formula	7
1.9 Martingales	7
1.10 Girsanov's Theorem	7
1.11 Black's Formula (1976)	8
1.12 Pricing Derivatives and Changing of Numeraire	8
1.13 Pricing of Interest Rate Derivatives and the Forward Measure	9
<b>2 Heath-Jarrow-Morton and Brace-Gatarek-Musiela Models</b>	<b>13</b>
2.1 HJM and BGM Models Under the Spot Measure	13
2.2 Vasicek Model	16
2.3 Cox-Ingersoll-Ross Model	17
2.4 Black-Karasiriski Model	17
2.5 HJM and BGM Models under the Forward Measures	18

<b>3</b>	<b>Simulation</b>	<b>21</b>
3.1	Simulation of HJM and BGM Models under the Forward Measure	21
3.2	Monte Carlo Simulation of Multidimensional Gaussian Variables	22
	Random Numbers Generation	22
	Principal Components Analysis (PCA)	23
	Cholesky Decomposition	24
3.3	Trinomial Tree Simulation of Multidimensional Gaussian Variables	25
<b>4</b>	<b>Swaption Pricing and Calibration</b>	<b>27</b>
4.1	Linear Pricing in the BGM Model	29
4.2	Linear Pricing of Swaptions in the HJM Model	30
4.3	Universal Volatility Function	31
4.4	Time Homogeneous Volatility	33
4.5	Separated Volatility	34
	Example of Separated Calibration	36
4.6	Parametrized Volatility	37
4.7	Parametric Calibration to Caps and Swaptions Based on Rebonato Approach	38
4.8	Semilinear Pricing of Swaptions in the BGM Model	40
4.9	Semilinear Pricing of Swaptions in the HJM Model	41
4.10	Nonlinear Pricing of Swaptions	43
4.11	Examples	43
<b>5</b>	<b>Smile Modelling in the BGM Model</b>	<b>45</b>
5.1	The Shifted BGM Model	46
5.2	Stochastic Volatility for Long Term Options	48
5.3	The Uncertain Volatility Displaced LIBOR Market Model	50
5.4	Mixing the BGM and HJM Models	52
<b>6</b>	<b>Simplified BGM and HJM Models</b>	<b>55</b>
6.1	CMS Rate Dynamics in Single-Factor HJM Model	55
6.2	CMS Rate Dynamics in a Single Factor BGM Model	57
6.3	Calibration	58
6.4	Smile	59
<b>Part II</b>	<b>CALIBRATION</b>	<b>63</b>
<b>7</b>	<b>Calibration Algorithms to Caps and Floors</b>	<b>67</b>
7.1	Introduction	67
7.2	Market Data	67
	Interpretation of ATM Swaption Quotes	69
7.3	Calibration to Caps	70
	7.3.1 Caplet Values	70
	7.3.2 ATM Strikes for Caps	71
	7.3.3 Stripping Caplet Volatilities from Cap Quotes	74

7.4	Non-Parametric Calibration Algorithms	78
7.4.1	Piecewise Constant Instantaneous Volatilities Depending on the Time to Maturity	79
7.4.2	Piecewise Constant Instantaneous Volatilities Depending on the Maturity of the Underlying Forward Rate	84
7.5	Conclusions	86
<b>8</b>	<b>Non-Parametric Calibration Algorithms to Caps and Swaptions</b>	<b>89</b>
8.1	Introduction	89
8.2	The Separated Approach	90
8.3	The Separated Approach with Optimization	109
8.4	The Locally Single Factor Approach	117
8.5	Calibration with Historical Correlations of Forward Rates	120
8.6	Calibration to Co-Terminal Swaptions	125
8.7	Conclusions	129
<b>9</b>	<b>Calibration Algorithms to Caps and Swaptions Based on Optimization Techniques</b>	<b>131</b>
9.1	Introduction	131
9.2	Non Parametric Calibration to Caps and Swaptions	132
9.3	Parametric Method of Calibration	157
9.3.1	Parametric Calibration to Cap Prices	157
9.3.2	Parametric Calibration to Swaptions	161
9.4	Conclusions	166
<b>Part III</b>	<b>SIMULATION</b>	<b>167</b>
<b>10</b>	<b>Approximations of the BGM Model</b>	<b>171</b>
10.1	Euler Approximation	171
10.2	Predictor-Corrector Approximation	171
10.3	Brownian Bridge Approximation	172
10.4	Combined Predictor-Corrector-Brownian Bridge	173
10.5	Single-Dimensional Case	174
10.6	Single-Dimensional Complete Case	175
10.7	Binomial Tree Construction for $L^*(t)$	177
10.8	Binomial Tree Construction for $L^{\sigma}(t)$	180
10.9	Numerical Example of Binomial Tree Construction	181
10.10	Trinomial Tree Construction for $L^A_N(t)$	188
10.11	Trinomial Tree Construction for $L^{\sigma}(t)$	191
10.12	Numerical Results	192
10.13	Approximation of Annuities	192
10.14	Swaption Pricing	195
10.15	Lognormal Approximation	198
10.16	Comparison	200
10.17	Practical Example - Calibration to Co-terminal Swaptions and Simulation	200

<b>11</b>	<b>The One Factor LIBOR Markov Functional Model</b>	<b>205</b>
11.1	LIBOR Markov Functional Model Construction	205
11.2	Binomial Tree Construction - Approach 1	207
11.3	Binomial Tree Construction - Approach 2	215
<b>12</b>	<b>Optimal Stopping and Pricing of Bermudan Options</b>	<b>219</b>
12.1	Tree/Lattice Pricing	220
12.2	Stochastic Meshes	221
12.3	The Direct Method	221
12.4	The Longstaff-Schwartz Method	222
12.5	Additive Noise	224
12.6	Example of BGM Dynamics	228
12.7	Comparison of Methods	228
<b>13</b>	<b>Using the LSM Approach for Derivatives Valuation</b>	<b>229</b>
13.1	Pricing Algorithms	229
13.2	Numerical Examples of Algorithms 13.1-13.4	234
13.3	Calculation Results	252
13.4	Some Theoretical Remarks on Optimal Stopping Under LSM	253
13.5	Summary	257
