Preface

Karl Joreskog	-	i
A History and Perspectives		1
1 <i>DAG SORBOM</i>		
Karl Joreskog and LISREL: a personal story		3
2 <i>GOSTA HAGGLUND</i>		
Milestones in the history of Factor Analysis		11
2.1 Some ancient ideas		12
2.2 The prospering interest of the human being in the 19th century		13
2.3 Francis Galton — The direct forerunner of factor analysis		13
2.4 Karl Pearson — Why did not he invent factor analysis?		15
2.5 Charles Spearman — The father of factor analysis		19
2.6 Group factor models — Thomson, Burt, Cattell, and Holzinger		24
2.7 Harold Hotelling — Principal components		26
2.8 Louis Leon Thurstone — Multiple factor analysis		28
2.9 Louis Guttman — Alternative approaches		32
2.10 Karl Joreskog — Breakthroughs in estimation and LISREL		34

3	<i>ROBERT C. MACCALLUM, LEDYARD R. TUCKER, & NANCYE BFI/GGS</i>	
	An alternative perspective on parameter estimation in factor analysis and related methods	39
3.1	The conventional view of parameter estimation in factor analysis.	40
3.2	An alternative view.	41
3.3	Example.	44
3.4	Summary of perspectives on estimation.	50
3.5	Implications for evaluation of estimation methods	50
3.6	Conclusions.	57
4	<i>STANLEY A. MULAİK</i>	
	Objectivity and other metaphors of structural equation modeling	59
5	<i>STEFFEN KUHNEL</i>	
	The didactical power of Structural Equation Modeling	79
5.1	Example Data	80
5.2	The specification of a statistical model	82
5.3	Identification, underidentification, and equivalent models	83
5.4	Deduction, Induction, and sufficient statistics	84
5.5	Statistical tests of nested models	87
5.6	Model modification: the role of exploration and confirmation	89
5.7	Misspecification and causal inferences.	91
5.8	Reality and data	92
5.9	The priority of theory.	93
5.10	Conclusion.	96
6	<i>WILLEM E. SARIS</i>	
	Measurement models in sociology and political science	97
6.1	Introduction	98
6.2	The multiple indicator or congeneric test model	99
6.3	The three-wave panel or quasi simplex model	100
6.4	The classical multitrait-multimethod model.	102
6.5	Alternative models for MTMM data	108
6.6	Adjustment for no opinion.	110
6.7	Conclusion	114

B	Robustness, Reliability, Fit Assessment	117
7	<i>KENNETH A. BOLLEN</i>	
	Two-stage least squares and latent variable models: simultaneous estimation and robustness to misspecifications	119
7.1	Model and estimator	122
7.2	Robustness of 2SLS to model misspecification	129
7.3	Robustness example	131
7.4	Empirical example	133
7.5	Conclusion and implications	134
8	<i>ANNE BOOMSMA & JEFFREY J. HOOGLAND</i>	
	The robustness of LISREL modeling revisited	139
8.1	Introduction	140
8.2	Robustness against small sample size	140
8.3	Comparing estimators under nonnormality	145
8.4	Nonconvergence and Heywood cases revisited	147
8.5	Bias of estimators and minimum sample size	149
8.6	Parameter estimators	152
8.7	Robust standard errors and fit statistics	155
8.8	Standard error estimators	157
8.9	Chi-square model test statistics	161
8.10	Discussion	164
9	<i>EINAR BREIVIK & ULF H. OLSSON</i>	
	Adding variables to improve fit: the effect of model size on fit assessment in LISREL	169
9.1	The role of parsimony in the assessment of model fit	170
9.2	Model size and fit assessment: an empirical example	171
9.3	Research design	172
• 9.4	Results	176
9.5	Summary and conclusion	180
9.6	Appendix	182

10 GREGORY R. HANCOCK & RALPH O. MUELLER	
Rethinking construct reliability within latent variable systems	195
10.1 Introduction	196
10.2 Development of a measure of construct reliability	201
10.3 Characteristics of coefficient H	207
10.4 Conclusion	213
10.5 Appendix: PRELIS and LISREL syntax for bootstrapping #2	14
11 TENKORAYKOV	
Studying change in scale reliability for repeated multiple measurements via covariance structure modeling	217
11.1 Introduction	218
11.2 Background, notation, and modeling approach	219
11.3 Testing equality of scale reliability coefficients	222
11.4 Illustration on data	226
11.5 Conclusion	228
11.6 Appendix: LISREL syntax for testing equality of reliability in repeated assessment contexts with multiple measures	230
12 ALBERT SATORRA	
Goodness of fit testing of structural equation models with multiple group data and nonnormality	231
12.1 Introduction	232
12.2 Data and general model set-up	234
12.3 MD estimation and testing	238
12.4 Asymptotic robustness	244
12.5 Monte Carlo illustration	246
12.6 Discussion	248
C Repeated Measurements, Experimental Design	257

13 STEPHEN H.C. DU TOIT & ROBERT CUDECK

The analysis of nonlinear random coefficient regression models with LISREL using constraints	259
13.1 Introduction	260
13.2 The model	261
13.3 Ability and performance on visual search task	264
13.4 Estimation as a LISREL submodel	268
13.5 Discussion	272
13.6 Appendix: Implementation of the model in LISREL	274

14 STEPHEN H.C. DU TOIT & MICHAEL N. BROWNE

The covariance structure of a vector ARMA time series	279
14.1 Introduction	280
14.2 Summarizing the effect of unobserved preceding values in a time series	280
14.3 A covariance structure that permits a less restrictive process before the first observation	287
14.4 Covariance structure of a stationary VARMA(p, q) process	291
14.5 Potential applications of the VARMA(p, q) covariance structure	298
14.6 An example	303
14.7 Concluding comments	311
14.8 Appendix: LISREL syntax for fitting a VARMA covariance structure	312

15 DAVID KAPLAN, POUNA HARIK, & LAWRENCE HOTCHKISS

Cross-sectional estimation of dynamic structural equation models in disequilibrium	315
15.1 Denning concepts of stability and equilibrium	317
15.2 The stability index	319
15.3 Design of simulation study	323
15.4 Results	328
15.5 Summary and discussion	336
15.6 Appendix: matrices used for simulation study	339

16	<i>JOHN J. MCARDLE</i>	
	A latent difference score approach to longitudinal dynamic structural analysis	341
16.1	Introduction	342
16.2	Illustrative data	344
16.3	Latent difference score (LDS) structural models	345
16.4	Univariate dynamic structural models	353
16.5	Bivariate dynamic structural models	362
16.6	Multivariate structural but dynamic models	369
16.7	Discussion	373
16.8	Appendix: Technical notes and input scripts for running LDS using the LISREL program	375
17	<i>YUTAKAKANO</i>	
	Structural equation modeling for experimental data	381
17.1	Introduction	382
17.2	Examples	382
17.3	Conditional inference	389
17.4	Bias	395
17.5	Statistical power	399
17.6	Epilogue	402
D	Ordinal Data, Interaction Models	403
18	<i>FAN YANG-WALLENTIN, PETER SCHMIDT, & SEBASTIAN BAMBERG</i>	
	Testing Interactions with three different methods in the theory of planned behavior: analysis of traffic behavior data	405
18.1	Theory	406
18.2	Hypotheses	410
• 18.3	Study-design and measurements	413
18.4	Data analysis	414
18.5	Summary and Conclusion	423

19 *FANYANG-WALLENTIN*

Comparisons of the ML and TSLS estimators for the Kenny-Judd model	425
19.1 The Kenny-Judd model	426
19.2 Maximum likelihood method	427
19.3 Two-stage least squares method	428
19.4 Simulation design	429
19.5 Comparisons of TSLS and ML estimators	430
19.6 Analysis of the BEA data	434
19.7 Conclusions	442

20 *PEDER BLOM & ANDERS CHRISTOFFERSSON*

Estimation of nonlinear structural equation models using empirical characteristic functions	443
20.1 Introduction	444
20.2 Nonlinear structural equation models	445
20.3 The characteristic function of the nonlinear confirmatory factor model	446
20.4 Estimation	448
20.5 Monte Carlo study	453

21 *IRINIMOUSTAKI*

A review of exploratory factor analysis for ordinal categorical data	461
21.1 Introduction	462
21.2 Underlying variable approach	462
21.3 Item response theory approach	468
21.4 Goodness of fit	471
21.5 Applications	472
21.6 Conclusion	476

22 *ROLF STEYER & IVAILO PARTCHEV*

Latent state-trait modeling with logistic item response models	481
22.1 Introduction	482
22.2 Logistic item response models	484
22.3 Logistic latent state-trait models for polytomous items	489
22.4 An example	503
22.5 Discussion	517
