

# Financial Risk Modelling and Portfolio Optimization with R

**Bernhard Pfaff**

*Invesco Global Strategies, Germany*

A John Wiley & Sons, Ltd., Publication

# Contents

<b>Preface</b>	<b>xi</b>
<b>List of abbreviations</b>	<b>xiii</b>
<b>Part I MOTIVATION</b>	<b>1</b>
<b>1 Introduction</b>	<b>3</b>
Reference	5
<b>2 A brief course in R</b>	<b>6</b>
2.1 Origin and development	6
2.2 Getting help	7
2.3 Working with R	10
2.4 Classes, methods and functions	12
2.5 The accompanying package FRAPO	20
References	25
<b>3 Financial market data</b>	<b>26</b>
3.1 Stylized facts on financial market returns	26
3.1.1 Stylized facts for univariate series	26
3.1.2 Stylized facts for multivariate series	29
3.2 Implications for risk models	32
References	33
<b>4 Measuring risks</b>	<b>34</b>
4.1 Introduction	34
4.2 Synopsis of risk measures	34
4.3 Portfolio risk concepts	39
References	41
<b>5 Modern portfolio theory</b>	<b>43</b>
5.1 Introduction	43

5.2	Markowitz portfolios	43
5.3	Empirical mean–variance portfolios	47
	References	49
<b>Part II RISK MODELLING</b>		<b>51</b>
<b>6</b>	<b>Suitable distributions for returns</b>	<b>53</b>
6.1	Preliminaries	53
6.2	The generalized hyperbolic distribution	53
6.3	The generalized lambda distribution	56
6.4	Synopsis of R packages for the GHD	62
6.4.1	The package <b>fBasics</b>	62
6.4.2	The package <b>GeneralizedHyperbolic</b>	63
6.4.3	The package <b>ghyp</b>	64
6.4.4	The package <b>QRM</b>	65
6.4.5	The package <b>SkewHyperbolic</b>	66
6.4.6	The package <b>VarianceGamma</b>	67
6.5	Synopsis of R packages for GLD	67
6.5.1	The package <b>Davies</b>	67
6.5.2	The package <b>fBasics</b>	67
6.5.3	The package <b>gld</b>	68
6.5.4	The package <b>lmomco</b>	69
6.6	Applications of the GHD to risk modelling	69
6.6.1	Fitting stock returns to the GHD	69
6.6.2	Risk assessment with the GHD	73
6.6.3	Stylized facts revisited	75
6.7	Applications of the GLD to risk modelling and data analysis	78
6.7.1	VaR for a single stock	78
6.7.2	Shape triangle for FTSE 100 constituents	79
	References	82
<b>7</b>	<b>Extreme value theory</b>	<b>84</b>
7.1	Preliminaries	84
7.2	Extreme value methods and models	85
7.2.1	The block maxima approach	85
7.2.2	<i>r</i> th largest order models	86
7.2.3	The peaks-over-threshold approach	87
7.3	Synopsis of R packages	89
7.3.1	The package <b>evd</b>	89
7.3.2	The package <b>evdbayes</b>	90
7.3.3	The package <b>evir</b>	91

7.3.4	The package <b>fExtremes</b>	93
7.3.5	The packages <b>ismev</b> and <b>extRemes</b>	95
7.3.6	The package <b>POT</b>	96
7.3.7	The package <b>QRM</b>	97
7.3.8	The package <b>Renext</b>	97
7.4	Empirical applications of EVT	98
7.4.1	Section outline	98
7.4.2	Block maxima model for Siemens	99
7.4.3	<i>r</i> block maxima model for BMW	101
7.4.4	POT method for Boeing	105
	References	110
<b>8</b>	<b>Modelling volatility</b>	<b>112</b>
8.1	Preliminaries	112
8.2	The class of ARCH models	112
8.3	Synopsis of R packages	116
8.3.1	The package <b>bayesGARCH</b>	116
8.3.2	The package <b>ccgarch</b>	117
8.3.3	The package <b>fGarch</b>	118
8.3.4	The package <b>gogarch</b>	118
8.3.5	The packages <b>rugarch</b> and <b>rmgarch</b>	120
8.3.6	The package <b>tseries</b>	122
8.4	Empirical application of volatility models	123
	References	125
<b>9</b>	<b>Modelling dependence</b>	<b>127</b>
9.1	Overview	127
9.2	Correlation, dependence and distributions	127
9.3	Copulae	130
9.3.1	Motivation	130
9.3.2	Correlations and dependence revisited	131
9.3.3	Classification of copulae	133
9.4	Synopsis of R packages	136
9.4.1	The package <b>BLCOP</b>	136
9.4.2	The packages <b>copula</b> and <b>nacopula</b>	138
9.4.3	The package <b>fCopulae</b>	140
9.4.4	The package <b>gumbel</b>	141
9.4.5	The package <b>QRM</b>	142
9.5	Empirical applications of copulae	142
9.5.1	GARCH–copula model	142
9.5.2	Mixed copula approaches	149
	References	151

<b>Part III PORTFOLIO OPTIMIZATION APPROACHES</b>	<b>153</b>
<b>10 Robust portfolio optimization</b>	<b>155</b>
10.1 Overview	155
10.2 Robust statistics	156
10.2.1 Motivation	156
10.2.2 Selected robust estimators	157
10.3 Robust optimization	160
10.3.1 Motivation	160
10.3.2 Uncertainty sets and problem formulation	160
10.4 Synopsis of R packages	166
10.4.1 The package <b>covRobust</b>	166
10.4.2 The package <b>fPortfolio</b>	166
10.4.3 The package <b>MASS</b>	167
10.4.4 The package <b>robustbase</b>	168
10.4.5 The package <b>robust</b>	168
10.4.6 The package <b>rrcov</b>	169
10.4.7 The package <b>Rsoep</b>	170
10.5 Empirical applications	171
10.5.1 Portfolio simulation: Robust versus classical statistics	171
10.5.2 Portfolio back-test: Robust versus classical statistics	177
10.5.3 Portfolio back-test: Robust optimization	182
References	187
<b>11 Diversification reconsidered</b>	<b>189</b>
11.1 Introduction	189
11.2 Most diversified portfolio	190
11.3 Risk contribution constrained portfolios	192
11.4 Optimal tail-dependent portfolios	195
11.5 Synopsis of R packages	197
11.5.1 The packages <b>DEoptim</b> and <b>RcppDE</b>	197
11.5.2 The package <b>FRAPO</b>	199
11.5.3 The package <b>PortfolioAnalytics</b>	201
11.6 Empirical applications	201
11.6.1 Comparison of approaches	201
11.6.2 Optimal tail-dependent portfolio against benchmark	206
11.6.3 Limiting contributions to expected shortfall	211
References	215
<b>12 Risk-optimal portfolios</b>	<b>217</b>
12.1 Overview	217
12.2 Mean–VaR portfolios	218
12.3 Optimal CVaR portfolios	223
12.4 Optimal draw-down portfolios	227

12.5	Synopsis of R packages	229
12.5.1	The package <b>fPortfolio</b>	229
12.5.2	The package <b>FRAPO</b>	230
12.5.3	Packages for linear programming	232
12.5.4	The package <b>PerformanceAnalytics</b>	236
12.6	Empirical applications	238
12.6.1	Minimum-CVaR versus minimum-variance portfolios	238
12.6.2	Draw-down constrained portfolios	242
12.6.3	Back-test comparison for stock portfolio	247
	References	253
13	<b>Tactical asset allocation</b>	255
13.1	Overview	255
13.2	Survey of selected time series models	256
13.2.1	Univariate time series models	256
13.2.2	Multivariate time series models	262
13.3	Black–Litterman approach	270
13.4	Copula opinion and entropy pooling	273
13.4.1	Introduction	273
13.4.2	The COP model	273
13.4.3	The EP model	274
13.5	Synopsis of R packages	276
13.5.1	The package <b>BLCOP</b>	276
13.5.2	The package <b>dse</b>	278
13.5.3	The package <b>fArma</b>	281
13.5.4	The package <b>forecast</b>	281
13.5.5	The package <b>MSBVAR</b>	283
13.5.6	The package <b>PairTrading</b>	284
13.5.7	The packages <b>urca</b> and <b>vars</b>	285
13.6	Empirical applications	288
13.6.1	Black–Litterman portfolio optimization	288
13.6.2	Copula opinion pooling	295
13.6.3	Protection strategies	299
	References	310
<b>Appendix A</b>	<b>Package overview</b>	314
A.1	Packages in alphabetical order	314
A.2	Packages ordered by topic	317
	References	320
<b>Appendix B</b>	<b>Time series data</b>	324
B.1	Date-time classes	324
B.2	The <b>ts</b> class in the base package <b>stats</b>	327
B.3	Irregular-spaced time series	328

B.4	The package timeSeries	330
B.5	The package zoo	332
B.6	The packages tframe and xts	334
	References	337
<b>Appendix C</b>	<b>Back-testing and reporting of portfolio strategies</b>	<b>338</b>
C.1	R packages for back-testing	338
C.2	R facilities for reporting	339
C.3	Interfacing databases	339
	References	340
<b>Appendix D</b>	<b>Technicalities</b>	<b>342</b>
	<b>Index</b>	<b>343</b>
