

# Research Design in Social Research

David A. de Vaus

# CONTENTS

<i>List of Figures</i>	xi
<i>List of Tables</i>	xiv
<i>Preface</i>	xvi
<b>PART I: WHAT IS RESEARCH DESIGN?</b>	<b>1</b>
<b>1 The Context of Design</b>	<b>1</b>
Description and explanation	1
Descriptive research	1
Explanatory research	2
Theory testing and theory construction	5
Theory building	5
Theory testing	6
What is research design?	8
Design versus method	9
Adopting a sceptical approach to explanations	11
Summary	16
<b>2 Tools for Research Design</b>	<b>17</b>
Before design	17
Focusing and clarifying the research question	17
Identifying plausible rival hypotheses	22
Operationalization	24
Concepts for research design	27
Internal validity	27
External validity	28
Measurement error	29
Summary	32
<b>3 Causation and the Logic of Research Design</b>	<b>34</b>
Inferring causal relationships	34
Criteria for inferring cause	34
Types of causal patterns	36
Providing a frame of reference	39
Comparing groups	40

# CONTENTS

Comparing time points	42
Making meaningful comparisons	43
Interventions and independent variables	47
Dimensions of a research design	47
A range of research designs	48
Experimental design	48
Longitudinal design	49
Cross-sectional design	50
Case studies	50
Summary	51
Notes	52
<b>PART II: EXPERIMENTAL DESIGNS</b>	<b>53</b>
<b>4 Types of Experimental Design</b>	<b>53</b>
The classic experimental design	53
Experimental contexts	56
Simpler experimental designs	59
Post-test only with control group	60
Retrospective experimental design	60
More complex experimental designs	62
Multiple post-tests	62
Multiple groups	62
Solomon four-group design	63
Factorial designs	65
Summary	69
Notes	69
<b>5 Issues in Experimental Design</b>	<b>70</b>
Methodological issues	70
The problem of explanatory narrowness	70
Problems with internal validity	72
Problems with external validity	76
Practical issues	78
How much do you tell participants?	78
How many participants?	78
How should participants be recruited?	79
Gaps between tests and interventions	79
Which method of data collection?	80
Problems with randomized assignment	80
Unevenness of interventions	82
The self-fulfilling prophecy	83
Ethical issues	83
Voluntary participation	83
Informed consent	84
No harm to participants	86
Anonymity and confidentiality	87

## CONTENTS

Summary	88
Notes	* 88
<b>6 Analysing Experimental Data</b>	<b>89</b>
Selecting the method of analysis	- 89
What kind of analysis is required: description or inference?	89
What sort of sample do we have?	90
What level of data do we have?	90
Type of comparisons required?	92
What type of display is required?	96
How many groups are to be compared?	97
Are the comparison groups independent samples?	101
Is the dependent variable normally distributed?	102
Is the variance on the dependent variable similar between each comparison group?	103
How many independent variables?	103
Summary process for selecting the right measure	104
Other issues	110
Change scores	110
Truncation effects (floor and ceiling effects)	110
Trend analysis	** 111
Summary	111
Note	112
<b>PART III: LONGITUDINAL DESIGNS</b>	<b>113</b>
<b>7 Types of Longitudinal Design</b>	<b>113</b>
Purposes of longitudinal design	114
Describing patterns of change and stability	114
Establishing temporal order	115
Establishing developmental (age) effects	115
Establishing historical (period) effects	115
Life course 'career' analysis	118
Types of longitudinal design	118
Prospective panel designs	118
Retrospective designs	126
Quasi-longitudinal designs	128
Summary	129
Note	130
<b>8 Issues in Longitudinal Design</b>	<b>131</b>
Methodological issues	131
Issues of internal validity	131
Issues of external validity	135
Practical issues	138
Standardization of instruments	138

## CONTENTS

Panel attrition	138
Respondent burden	139
Respondent recall	140
Cost	140
Method of data collection	141
Number of waves	142
Gap between waves	142
Sample error	143
Sample size	143
Instrument design	144
Staffing	144
Ethical issues	144
Voluntary participation	145
Informed consent	145
Harm to participants'	145
Confidentiality and anonymity	146
Summary	146
<b>9 Data Analysis in Longitudinal Design</b>	<b>147</b>
Missing data	147
Sources of missing data	147
Why a problem?	148
Identifying missing data bias	149
Dealing with missing data	149
Measuring change	153
Aggregate level versus individual level change	153
Qualitative versus quantitative change	154
Measuring change in panel designs	155
Describing change	163
Tables	163
Graphical	163
Summary	168
Note	169
<b>PART IV: CROSS-SECTIONAL DESIGNS</b>	<b>170</b>
<b>10 Cross-Sectional Design</b>	<b>170</b>
No'time dimension	170
Reliance on existing differences	171
The nature of 'groups' in the cross-sectional design	172
Obtaining a time dimension: repeated cross-sectional studies	173
<b>11 Issues in Cross-Sectional Design</b>	<b>176</b>
Methodological issues	176
Internal validity	176
External validity	184

## CONTENTS

Practical issues	185
Method of collecting data	185
Sample sizes	187
Sufficient variation in the sample on key variables	190
Information for statistical controls	190
Length	190
Types of data	191
Ethical issues	192
Summary	193
Notes	193
<b>12 Cross-Sectional Analysis</b>	<b>194</b>
Descriptive analysis	194
How many?	195
Level of detail	196
Form of data	197
Who?	199
Factor structures and scale structures	199
How general? How close?	200
Explanatory analysis	201
The logic of statistical controls	201
Multiple statistical controls	203
The elaboration technique	203
Basic approach	203
Interpretation	204
Problems with the elaboration model	210
Multivariable analysis	211
Cohort analysis	211
Constructing and reading cohort tables	212
Problems with cohort analysis	217
Summary	218
<b>PART V: CASE STUDY DESIGNS</b>	<b>219</b>
<b>13 Case Study Design</b>	<b>219</b>
What is a case?	220
Units of analysis	220
Holistic and embedded units of analysis	220
Case studies and theory	221
Explanatory case studies	221
Descriptive case studies	224
Other elements of case study designs	226
Single or multiple cases?	226
Parallel or sequential?	227
Retrospective or prospective?	227
Types of case study designs	228
