

ESSENTIAL MATHEMATICS FOR

ECONOMIC ANALYSIS

FOURTH EDITION

Knut Sydsaeter and Peter Hammond
with Arne Strøm

CONTENTS

Review	XI	3.3 Double Sums	59
		3.4 A Few Aspects of Logic	61
1 Introductory Topics I: Algebra	1	3.5 Mathematical Proofs	67
1.1 The Real Numbers	1	3.6 Essentials of Set Theory	69
1.2 Integer Powers	4	3.7 Mathematical Induction	75
1.3 Rules of Algebra	10	Review Problems for Chapter 3	77
1.4 Fractions	14		
1.5 Fractional Powers	19	4 Functions of One Variable	79
1.6 Inequalities	24	4.1 Introduction	79
1.7 Intervals and Absolute Values	29	4.2 Basic Definitions	80
Review Problems for Chapter 1	32	4.3 Graphs of Functions	86
		4.4 Linear Functions	89
2 Introductory Topics II: Equations	35	4.5 Linear Models	95
2.1 How to Solve Simple Equations	35	4.6 Quadratic Functions	99
2.2 Equations with Parameters	38	4.7 Polynomials	105
2.3 Quadratic Equations	41	4.8 Power Functions	112
2.4 Linear Equations in Two Unknowns	46	4.9 Exponential Functions	114
2.5 Nonlinear Equations	48	4.10 Logarithmic Functions	119
Review Problems for Chapter 2	49	Review Problems for Chapter 4	124
		5 Properties of Functions	127
3 Introductory Topics III: Miscellaneous	51	5.1 Shifting Graphs	127
3.1 Summation Notation	51	5.2 New Functions from Old	132
3.2 Rules for Sums. Newton's Binomial Formula	55	5.3 Inverse Functions	136
		5.4 Graphs of Equations	143
		5.5 Distance in the Plane. Circles	146

5.6	General Functions	150	9	Integration	293
	Review Problems for Chapter 5	153	9.1	Indefinite Integrals	293
6	Differentiation	155	9.2	Area and Definite Integrals	299
6.1	Slopes of Curves	155	9.3	Properties of Definite Integrals	305
6.2	Tangents and Derivatives	157	9.4	Economic Applications	309
6.3	Increasing and Decreasing Functions	163	9.5	Integration by Parts	315
6.4	Rates of Change	165	9.6	Integration by Substitution	319
6.5	A Dash of Limits	169	9.7	Infinite Intervals of Integration	324
6.6	Simple Rules for Differentiation	174	9.8	A Glimpse at Differential Equations	330
6.7	Sums, Products, and Quotients	178	9.9	Separable and Linear Differential Equations	336
6.8	Chain Rule	184		Review Problems for Chapter 9	341
6.9	Higher-Order Derivatives	188	10	Topics in Financial Economics	345
6.10	Exponential Functions	194	10.1	Interest Periods and Effective Rates	345
6.11	Logarithmic Functions	197	10.2	Continuous Compounding	349
	Review Problems for Chapter 6	203	10.3	Present Value	351
.7	Derivatives in Use	205	10.4	Geometric Series	353
7.1	Implicit Differentiation	205	10.5	Total Present Value	359
7.2	Economic Examples	210	10.6	Mortgage Repayments	364
7.3	Differentiating the inverse	214	10.7	Internal Rate of Return	369
7.4	Linear Approximations	217	10.8	A Glimpse at Difference Equations	371
7.5	Polynomial Approximations	221		Review Problems for Chapter 10	374
7.6	Taylor's Formula	225	11	Functions of Many Variables	377
7.7	Why Economists Use Elasticities	228	11.1	Functions of Two Variables	377
7.8	Continuity	233	11.2	Partial Derivatives with Two Variables	381
7.9	More on Limits	237	11.3	Geometric Representation	387
7.10	Intermediate Value Theorem.		11.4	Surfaces and Distance	393
	Newton's Method	245	11.5	Functions of More Variables	396
7.11	Infinite Sequences	249	11.6	Partial Derivatives with More Variables	400
7.12	L'Hopital's Rule	251	11.7	Economic Applications	404
	Review Problems for Chapter 7	256	11.8	Partial Elasticities	406
				Review Problems for Chapter 11	408
8	Single-Variable Optimization	259	12	Tools for Comparative Statics	411
8.1	Introduction	259	12.1	A Simple Chain Rule	411
8.2	Simple Tests for Extreme Points	262	12.2	Chain Rules for Many Variables	416
8.3	Economic Examples	266	12.3	Implicit Differentiation along a Level Curve	420
8.4	The Extreme Value Theorem	270	12.4	More General Cases	424
8.5	Further Economic Examples	276			
8.6	Local Extreme Points	281			
8.7	Inflection Points	287			
	Review Problems for Chapter 8	291			

12.5	Elasticity of Substitution	428	15.5	The Transpose	562
12.6	Homogeneous Functions of Two Variables	431	15.6	Gaussian Elimination	565
12.7	Homogeneous and Homothetic Functions	435	15.7	Vectors	570
12.8	Linear Approximations	440	15.8	Geometric Interpretation of Vectors	573
12.9	Differentials	444	15.9	Lines and Planes	578
12.10	Systems of Equations	449		Review Problems for Chapter 15	582
12.1 I	Differentiating Systems of Equations	452			
	Review Problems for Chapter 12	458			
13	Multivariable Optimization	461	16	Determinants and Inverse Matrices	585
13.1	Two Variables: Necessary Conditions	461	16.1	Determinants of Order 2	585
13.2	Two Variables: Sufficient Conditions	466	16.2	Determinants of Order 3	589
13.3	Local Extreme Points	470	16.3	Determinants of Order n	593
13.4	Linear Models with Quadratic Objectives	475	16.4	Basic Rules for Determinants	596
13.5	The Extreme Value Theorem	482	16.5	Expansion by Cofactors	601
13.6	Three or More Variables	487	16.6	The Inverse of a Matrix	604
13.7	Comparative Statics and the Envelope Theorem	491	16.7	A General Formula for the Inverse	610
	Review Problems for Chapter 13	495	16.8	Cramer's Rule	613
14	Constrained Optimization	497	16.9	The Leontief Model	616
14.1	The Lagrange Multiplier Method	497		Review Problems for Chapter 16	621
14.2	Interpreting the Lagrange Multiplier	504	17	Linear Programming	623
14.3	Several Solution Candidates	507	17.1	A Graphical Approach	623
14.4	Why the Lagrange Method Works	509	17.2	Introduction to Duality Theory	629
14.5	Sufficient Conditions	513	17.3	The Duality Theorem	633
14.6	Additional Variables and Constraints	516	17.4	A General Economic Interpretation	636
14.7	Comparative Statics	522	17.5	Complementary Slackness	638
14.8	Nonlinear Programming: A Simple Case •	526		Review Problems for Chapter 17	643
14.9	Multiple Inequality Constraints	532	Appendix: Geometry	645	
14.10	Nonnegativity Constraints	537	The; Greek Alphabet	647	
	Review Problems for Chapter 14	541	Answers to the Problems	649	
15	Matrix and Vector Algebra	545	Index	739	
15.1	Systems of Linear Equations	545			
15.2	Matrices and Matrix Operations	548			
15.3	Matrix Multiplication	551			
15.4	Rules for Matrix Multiplication	556
