List of Examples in Text	xi
Introductory Note	xvii
Glossary of Abbreviations	xx
1 Frequency Distributions	1
Frequency distributions, 1.5; Discrete variates, 1.9; Continuous variates, 1.10; Stem-and-leaf plots 1.14; Probability functions and distribution functions, 1.15; Random variables, 1.20; Density smoothing, 1.21; Excursus on integrals, 1.22; Variate transformations, 1.26; The genesis of distributions, 1.28; Multivariate distributions, 1.30; Hie bivariate case: conditional distributions, 1.32; Marginal distributions, 1.33; Independence, 1.34; Probability generating functions, 1.37; Exercises 1.1-1.24:	
2 Measures of Location and Dispersion	39
Location and scale parameters, 2.2; Measures of location; the arithmetic mean, 2.3; The geometric and harmonic means, 2.5; Comparison of means: standardization and weighting, 2.7; The median, 2.8; The mode, 2.10; Choice of location measure: robustness, 2.12; Quantiles, 2.13; Measures of dispersion, 2.16; Range and interquartile differences, 2.17; Mean deviation, 2.18; Variance and standard deviation, 2.19; Computational procedures, 2.20; Sheppard's corrections, 2.21; Mean difference 2.22; Robust dispersion measures, 2.23; Coefficients of variation: standardization, 2.24; Concentration, 2.25; Expected values in general, 2.27; Inequalities, 2.31; Exercises 2.1-2.31.	
3 Moments and Cumulants	74
Moments, 3.1; Calculation of moments, 3.3; Moment generating functions and characteristic functions, 3.5; Absolute moments, 3.6: Factorial moments, 3.7; Evaluation of factorial moments, 3.10; Factorial moment generating functions, 3.11; Cumulants, 3.12; Relations between moments and cumulants, 3.14; Evaluation of cumulants, 3.16; Factorial cumulants, 3.17; Corrections for grouping (Sheppard's corrections), 3.18; Average corrections 3.20; Sheppard's corrections for factorial moments, 3.23; Bernoulli numbers and polynomials and Gamma function formulae, 3.24; Sheppard's corrections for cumulants, 3.25; Negative and fractional moments, 3.26; Multivariate moments and cumulants, 3.27; Measures of skewness, 3.31; Kurtosis, 3.32; Measures of shape, 3.33; Moments as characteristics of a distribution, 3.34; Inequalities of the Chebyshev type, 3.35; Multivariate inequalities, 3.39; Information measures, 3.40; Distance between distributions, 3.42; The method of moments, 3.43; Exercises 3.1-3.33.	
4 Characteristic functions	125
The Inversion Theorem, 4.3; Conditions for a function to be a characteristic function, 4.7; Limiting properties of distribution and characteristic function'.	

4.9; The First Limit Theorem, 4.14; Converse of the First Limit Theorem, 4.15; Multivariate characteristic functions, 4.16; Conditional characteristic functions, 4.19; The problem of moments, 4.20; The Second Limit Theorem, 4.29; Infinitely divisible and stable characteristic functions, 4.33; Sums of random variables, 4.42; Exercises 4.1-4.30.

## 5 Standard Distributions

163

The binomial distribution, 5.2; Tables of the binomial distribution, 5.7; The Poisson distribution, 5.8; Tables of the Poisson distribution, 5.9; Generalizations of the binomial and Poisson, 5.10; Pólya urn scheme: the hypergeometric distributions, 5.13; Properties of the hypergeometric distribution, 5.14; Sequential sampling: the negative binomial distribution, 5.16; Mixtures of distributions, 5.20; Distributions modified by the recording process: censoring and truncation, 5.25; The logarithmic series distribution, 5.28; The uniform distribution, 5.30; The Poisson process: exponential and Gamma distributions, 5.31; The Weibull distribution: hazard rate, 5.33; The normal distribution: c.f. and moments, 5.36; The normal d.f., 5.37; Mills' ratio, 5.38; Tables of the normal distribution, 5.41; Properties of the normal distribution, 5.42; Mixtures of normal distributions, 5.44; Generalizations and extensions, 5.46; The exponential family of distributions, 5.47; Power series distributions, 5.49; Distributions on the circle and on the sphere, 5.50; Exercises 5.1-5.33.

## 6 Systems of Distributions

215

Pearson distributions, 6.2; Chebyshev-Hermite Polynomials, 6.14; The Gram-Charlier series of Type A, 6.17; Edgeworth's form of the Type A series, 6.18; Tetrachoric functions, 6.21; Other expansions, 6.24; Polynomial transformations to normality, 6.25; Functional transformations to normality: Johnson distributions, 6.27; The lognormal distribution, 6.29; Johnson's  $S_B$  system, 6.32; Johnson's  $S_V$  system, 6.35; Burr's distributions, 6.37; Fitting by frequency moments, 6.39; Distributions specified by hazard rates, 6.42; Exercises 6.1-6.25.

## 7 Multivariate Distributions

258

Basic structure, 7.2; The multinomial distribution, 7.7; The bivariate binomial distribution, 7.8; The bivariate Poisson distribution, 7.11; Multivariate urn schemes, 7.12; Mixture distributions, 7.14; The bivariate uniform distribution, 7.18; The binormal (bivariate normal) distribution, 7.20; Generation of multivariate distributions, 7.23; The Dirichlet distributions, 7.26; Bivariate families of distributions, 7.27; Copulas, 7.33; Hazard rate and NBU distributions, 7.34; Bivariate distributions with given conditionals, 7.36; Shape distributions, 7.37; Exercises 7.1-7.27.

## 8 Probability and Statistical Inference

286

The rules of probability, 8.5; Conditional probability and Bayes' Theorem, 8.7; Equally likely events, 8.9; Frequency theory of probability, 8.11; Logical probability, 8.12; Subjective probability, 8.14; Countably infinite numbers of events, 8.16; Probability in a continuum, 8.17; Bayes' postulate, 8.19; Maximum Likelihood, 8.22; Noninformative priors, 8.28; Informative priors, 8.30; Conjugate priors, 8.31; Random variables, 8.35; Joint and conditional distributions, 8.38; Sums of random variables, 8.40; The Weak Law of Large Numbers, 8.44;

The Strong Law of Large Numbers, 8.46; The Central Limit theorem, 8.47; Exercises 8.1-8.33.

- 9 Random Sampling 318**  
 The sampling problem, 9.1; Randomness in sampling practice, 9.5; The technique of random sampling, 9.9; Random sampling numbers, 9.11; Pseudorandom numbers, 9.19; Random values from specific distributions, 9.22; Sampling for attributes, 9.28; Standard error, 9.31; Exercises 9.1-9.20.
- 10 Standard Errors 346**  
 Standard errors of moments, 10.3; Standard errors of functions of random variables, 10.5; Standard errors of bivariate moments, 10.9; Standard errors of quantiles, 10.10; Standard error of the mean deviation, 10.13; Standard error of the mean difference, 10.14; Some commonly required standard errors, 10.15; The jackknife and the bootstrap, 10.17; Exercises 10.1-10.29.
- 11 Exact Sampling Distributions 374**  
 The analytical method, 11.2; Order statistics, 11.4; The geometrical method, 11.5; The method of characteristic functions, 11.6; The distribution of a sum or difference of independent random variables, 11.8; The distribution of a ratio or product of independent random variables, 11.9; Edgeworth and saddlepoint approximations for sums, 11.13; Exercises 11.1-11.32.
- 12 Cumulants of Sampling Distributions—(1) 414**  
 Symmetric functions, 12.4;  $A_r$ -statistics, 12.6; Expression of  $f_c$ -statistics in terms of symmetric products and sums, 12.9; Sampling cumulants of  $A_r$ -statistics, the combinatorial rules, 12.12; Sampling cumulants of  $A_r$ -statistics: the results, 12.16; Sampling cumulants of a ratio, 12.18; Sampling from finite populations, 12.20; Multiple  $A_r$ -statistics, 12.22; Exchangeability, 12.23; Exercises 12.1-12.22.
- 13 Cumulants of Sampling Distributions—(2) 455**  
 Bivariate  $it$ -statistics, 13.2; Proof of the combinatorial rules, 13.4; The essential structure of the results, 13.11; Summary of results, 13.15; Tables of symmetric functions, 13.18; Exercises 13.1-13.13.
- 14 Order Statistics 475**  
 Distributions in the continuous case, 14.2; The distribution function of an order statistic, 14.3; Median and quartiles in the standardized normal case, 14.4; Pearson's expansion, 14.9; Quantiles and extreme values: asymptotic distributions, 14.11; Asymptotic distributions of extreme values, 14.13; The three asymptotes, 14.15; Bivariate and multivariate extremes, 14.18; Asymptotic distributions of  $m$ th extreme values, 14.19; The order statistics in the normal case, 14.21; The general case, 14.22; Joint distribution of two order statistics, 14.23; Spacings, 14.24; Ranges and mid-ranges, 14.25; The exact distribution of the range, 14.26; The asymptotic distribution of the range, 14.27; The reduced range and mid-range, 14.29; Tables for extreme value distributions, 14.31; Exercises 14.1-14.28.

15	The Multinomial Distribution and Quadratic Forms	S08
	Characteristic function and moments, 15.2; Linear functions of normal variates, 15.4; The multinomial integral, 15.5; Orthant probabilities, 15.10; Quadratic forms in normal variates, 15.14; The decomposition of quadratic forms in independent normal variates, 15.20; Ratios of quadratic forms, 15.26; Characterizations of the normal distribution, 15.30; Exercises 15.1-15.30.	
16	Distributions Associated with the Normal	541
	The $\chi^2$ distribution, 16.2; Properties of the $\chi^2$ distribution, 16.3; Tables of the $\chi^2$ distribution, 16.4; Square-root and cube-root transformations of $\chi^2$ , 16.5; Student's $t$ distribution, 16.10; Properties of Student's $t$ distribution, 16.11; Tables of Student's $t$ distribution, 16.13; Fisher's $F$ and $z$ distributions, 16.15; Properties of the $F$ and $z$ distributions, 16.17; Tables of $F$ and $z$ , 16.19; Relations among the distributions, 16.22; The bivariate normal (binormal) distribution, 16.23; The distribution of the sample correlation coefficient, 16.24; Fisher's transformation of $r$ , 16.33; Distribution of regression coefficients in binormal samples, 16.35; A conditional approach, 16.37; Robustness, 16.38; Multinomial distribution theory, 16.42; The Wishart distribution, 16.43; The additive property of Wishart distributions, 16.47; Moments of the generalized variance, 16.49; The correlation determinant, 16.51; Hotelling's $T$ , 16.52; Large sample results, 16.56; The latent roots of the covariance matrix, 16.57; Large sample results for latent roots, 16.61; Further results, 16.63; Exercises 16.1-16.41.
