Experimental Auctions

Methods and Applications in Economic and Marketing Research

Jayson L. Lusk and Jason F. Shogren

CAMBRIDGE
UNIVERSITY PRESS

Contents

List of figures *page* **ix**
List of tables **x**

1 Introduction **1**
1.1 Introduction 1
1.2 Why experimental auctions? 3
1.3 What is an experimental auction? 5
1.4 Purpose of this book and boundaries of coverage 17

2 Incentive compatible auctions: theory and evidence **19**
2.1 Introduction 19
2.2 Theory of incentive compatible auctions 20
2.3 Evidence from induced value auctions 27

3 Value theory **34**
3.1 Introduction 34
3.2 Valuation under certainty 34
3.3 Valuation under uncertainty 37
3.4 Valuation in a dynamic environment with uncertainty, limited information, and irreversibility 43
3.5 Summary 44

4 Conducting experimental auctions: some preliminaries **46**
4.1 Introduction 46
4.2 Experimental design 47
4.3 Sample size determination 55
4.4 Experiment setting and context: field versus laboratory 57
4.5 Conclusions 61

5 Conducting experimental auctions **62**
5.1 Introduction 62
5.2 Training and practice 62
5.3 Endowment versus full bidding 65
5.4 Gfioosing an auction mechanism 69
5.5 Multiple good valuation, demand reduction, and field substitutes 76
5.6 Learning and affiliation in repeated bidding rounds 80
5.7 Negative values 92
5.8 Conclusions 94

6 Data analysis
6.1 Introduction
6.2 Censored regressions with auction bids
6.3 Quantile regression with auction bids
6.4 Panel data regression with auction bids
6.5 Other types of data analysis with auction bids
6.6 Conclusions

7 Valuation case studies
7.1 Introduction
7.2 Informing Policy I: beef tenderness grading system
7.3 Informing Policy II: valuing safer food
7.4 Informing Policy III: tolerance for genetically modified food
7.5 Marketing I: forecasting market share of a new product
7.6 Marketing II: preferences for fresh food with multiple quality attributes
7.7 Marketing III: the value of farm financial records
7.8 Controversial goods I: demand for genetically modified food in three countries
7.9 Controversial goods II: irradiation
7.10 Controversial goods III: food from animals treated with growth hormones
7.11 Concluding comments
Appendices

8 Auction design: case studies
8.1 Introduction
8.2 Preference learning
8.3 Willingness to pay, willingness to accept, and the auction mechanism
8.4 Second price auction tournaments
8.5 Preferences: fixed or fungible?
8.6 Gift exchange
8.7 Calibration of real and hypothetical auction bids
8.8 Hybrid auctions and consequential bidding
8.9 Concluding remarks

9 Validity of experimental auctions
9.1 Introduction
9.2 Auction bids and economic theory
9.3 Reliability
9.4 Convergent validity
9.5 Anomalies
9.6 Summary

10 The future of experimental auctions
10.1 Introduction
10.2 Ten questions worthy of future research
10.3 Concluding remarks •*
