# OPTIONS, FUTURES, AND OTHER DERIVATIVES

John C. Hull

Maple Financial Group Professor of Derivatives and Risk Management Joseph L. Rotman School of Management University of Toronto

### TENTH EDITION

New York, NY

	List of Business Snapshots	xviii
	List of Technical Notes	. xix
	Preface	
1.	Introduction	1
2.	Futures markets and central counterparties	24
3.	Hedging strategies using futures	49
4.	Interest rates	77
5.	Determination of forward and futures prices	107
6.	Interest rate futures	135
7.	Swaps	155
8.	Securitization and the credit crisis of 2007	184
9.	XVAs	199
10.	Mechanics of options markets	209
11.	Properties of stock options	231
12.	Trading strategies involving options	252
13.	Binomial trees	272
14.	Wiener processes and Itô's lemma	300
15.	The Black-Scholes-Merton model	319
16.	Employee stock options	352
17.	Options on stock indices and currencies	365
18.	Futures options and Black's model	381
19.	The Greek letters	397
20.	Volatility smiles	430
21.	Basic numerical procedures	449
22.	Value at risk and expected shortfall	493
23.	Estimating volatilities and correlations	520
24.	Credit risk	543
25.	Credit derivatives	569
26.	Exotic options	596
27.	More on models and numerical procedures	622
28.	Martingales and measures	652
29.	Interest rate derivatives: The standard market models	670
30.	Convexity, timing, and quanto adjustments	689
31.	Equilibrium models of the short rate	702
32.	No-arbitrage models of the short rate	715
33.	HJM, LMM, and multiple zero curves	738
34.	Swaps Revisited	757
35.	Energy and commodity derivatives	772
36.	Real options	789
37.	Derivatives mishaps and what we can learn from them	803
	Glossary of terms	815
	DerivaGem software	838
	Major exchanges trading futures and options	843
	Tables for $N(x)$	844
	Credits	846
	Author index	847
	Subject index	851

## Contents

	List of Business Snapshotsxv	viii
	List of Technical Notes	xix
	Preface	xx
Chapter 1.	Introduction         1.1       Exchange-traded markets         1.2       Over-the-counter markets         1.3       Forward contracts         1.4       Futures contracts         1.5       Options         1.6       Types of traders         1.7       Hedgers         1.8       Speculators         1.9       Arbitrageurs         1.10       Dangers         Summary       Further reading         Practice questions       Further questions	<b>1</b> 2 3 6 8 11 11 14 16 17 18 19 19 21
Chapter 2.	Futures markets and central counterparties         2.1       Background         2.2       Specification of a futures contract         2.3       Convergence of futures price to spot price         2.4       The operation of margin accounts         2.5       OTC markets         2.6       Market quotes         2.7       Delivery         2.8       Types of traders and types of orders         2.9       Regulation         2.10       Accounting and tax         2.11       Forward vs. futures contracts         Summary       Further reading         Practice questions       Further questions	24 24 26 28 29 32 36 38 39 40 41 43 44 45 45 45 47
Chapter 3.	Hedging strategies using futures.         3.1       Basic principles.         3.2       Arguments for and against hedging .         3.3       Basis risk.         3.4       Cross hedging .	49 49 51 54 58

### Contents

	3.5	Stock index futures	. 62
	3.6	Stack and roll	. 68
		Summary	. 70
		Further reading	. 70
		Practice questions	71

	21.1	Dinomial mees.	449
	21.2	contracts	457
	21.2	Binomial model for a dividend paying stock	450
	21,3 21.4	Alternative procedures for constructing trees	. тээ Лал
	41.4	Anternative procedures for constructing trees	. 404

-

	21.5	Time-dependent parameters	467
	21.6	Monte Carlo simulation	468
	21.7	Variance reduction procedures	474
	21.8	Finite difference methods	477
		Summary	487
		Further reading	488
		Practice questions.	489
		Further questions	491
CI	<b>X</b> 7 <b>I</b>		40.7
Chapter 22.	value		493
	22.1	The VaR and ES measures	493
	22.2	Historical simulation	496
	22.3	Model-building approach	500
	22.4	The linear model	503
	22.5	The quadratic model	508
	22.6	Monte Carlo simulation	511
	22.7	Comparison of approaches	512
	22.8	Back testing	512
	22.9	Principal components analysis	513
		Summary	516

<b>6 1 1 1</b>	<b>F</b>		530
Chapter 23.	Estima	iting volatilities and correlations	520
	23.1	Estimating volatility	520
	23.2	The exponentially weighted moving average model	522
	23.3	The GARCH (1,1) model	524
	23.4	Choosing between the models	525
	23.5	Maximum likelihood methods	526
	23.6	Using GARCH (1,1) to forecast future volatility	531
	23.7	Correlations	534
	23.8	Application of EWMA to four-index example	537
		Summary	539
		Further reading	539
		Practice questions	539
		Further questions	541
Chapter 34	Condit	-io)	E 47
Cuapter 24.	24 1	Cradit rations	543
	24.1	Listarial default probabilities	545
	24.2		544
	24.5	Recovery rates	545
	24,4	Estimating default probabilities from bond yield spreads	546
	24.5	Comparison of default probability estimates	549
	24.6	Using equity prices to estimate default probabilities	552
	24.7	Credit risk in derivatives transactions	554
	24.8	Default correlation	560
	24.9	Credit VaR	563
		Summary	565
		Further reading	565
