

Networks of Construction  
Ekaterina Nozhova

Institute of Historic Building Research and Conservation,  
Prof. Dr.-Ing. Uta Hassler

1	
<b>Industrialisation as a technical and historical context</b>	<b>13</b>
1.1	
Vladimir Shukhov and the construction company of Alexander Bary	15
Construction history and research on industrialisation: stereotypes and challenges	15
Vladimir Shukhov and Alexander Bary	18
Vladimir Shukhov: the state of research, new sources	20
The construction company of Alexander Bary in its historical context	22
1.2	
Industrialisation and metal structures: material and context	33
Metal structures in Russia in the middle of the 19th century: an overview	33
Foreign capital and expertise in the Russian metallurgical industry	37
Puddled, Bessemer and Siemens-Martin steel: qualities and the spread of technologies in Russia	40
Iron or steel?	43
<i>Prodameta</i> and <i>Krovlya</i>	45
Profiles diversity	49
Russian standard profiles. The Congress on Spreading the Use of Iron	50
Standard sections worldwide	52
International metric system and Russian profiles	53
Rolled profiles of weld and cast metal	54
Geometry of structural profiles	55
Angle profiles	56
I-profiles	56
Channels	57
Z-profiles	58
Rivets	58
Sheet metal quality	60
Ural sheet iron	62
Sizes of sheet metal	64
Metal processing machinery	64
Workers	68

2	
<b>Industrialisation and Shukhov's structures</b>	<b>101</b>
2.1	
Between geometry and craft: the setting out of hyperbolic structures	103
Metal structures: laying out, processing and assembly	103
The Laying out and processing of the cylindrical reservoir walls	105
The Laying out of the spherical reservoir bottom	107
The Laying out of ship plating	109
Hyperboloids	112
The Laying out of the NiGRES Tower	113
Between geometry and kraft	120
NiGRES Power Station and its transmission lines	120
2.2	
Theory and practice: <i>The Truss</i> and trials at the construction site	165
Contemporary methods of structural analysis and their spread in Russia	165
Truss systems: the conventional truss	167
<i>The Truss</i> by Shukhov	168
The pavilions of Alexander Bary at the All-Russian Exhibition in Nizhny Novgorod	172
Trials at the construction site: the hanging roof	173
Trials at the construction site: the arched vault	174
Details	176
Theory and practice	177
2.3	
Shabolovskaya Tower: symbolic object and everyday routine	193
The Russian radio network 1901-1917	193
Radio masts: conventional types	195
The All-Russian Radio Network and the International Radio Station	196
Shabolovskaya Tower: research prerequisites	199
The story of the commission	200
Higher than the Eiffel Tower	201
The height of the tower	201
The material of the tower and radio signal	202
The original design	202
Resource shortage	203

Material	205	Industrialisation as a world wide process	341
The foundation of the tower	206	Technology exchange	342
The detail between the sections	208	Moving towards standard, controllability and typical solutions	342
Assembly	210	Mechanisation	343
Reference to Schwedler	210	Newly established materials	344
Assembly schemes	211	Establishing new building typologies and sizes	345
Assembly: lifting	213	Scientification of engineering knowledge	345
The construction site/planning	215		
Symbolic structure and everyday routine	218		
<b>2.4</b>			
Metal shortage: substitution of metal for wood.		Appendix	<b>349</b>
The universal patented principle of the hyperbolic structure in application to wood	259	Appendix I	351
Timber and industry in Russia	259	Appendix II	353
Research on timber structures		Archives	356
in Russia (1927-1945)	260	Bibliography	356
Wooden shell prototypes	262	Colophon	360
Cooling towers, built according to Shukhov's structural principle	262		
Severouralsk	263		
General tower geometry	264		
The struts of the tower	265		
The rings of the tower	266		
The strut overlaps	267		
The precision of construction	267		
The assembly sequence	268		
The precision of structure	270		
The wooden hyperbolic water tower	273		
The details of the tower	273		
The universal construction principle for unique towers	277
