Preface	xiii
<b>Introduction</b>	<b>1</b>
<b>I INTRODUCTION TO EMPIRICAL ASSET PRICING</b>	
<b>1 Stochastic Discount Factors and <math>m</math>-Talk</b>	<b>9</b>
1.1 The Main Equation (1.1)	9
1.2 From the General to the Specific	11
1.3 Arbitrage and the SDF	11
<b>2 State Pricing</b>	<b>13</b>
2.1 Basic Setup	13
2.2 State Pricing with a Representative Maximizing Agent	14
2.3 Heterogeneous Agents with Complete Markets	15
2.4 Complete Markets, Risk Sharing, and a Constructed Representative Agent	16
2.5 Risk-Neutral Probabilities	17
2.6 Recovery	18
2.7 Multiperiod $m$ -Talk and State Pricing	19
<b>3 Maximization and the <math>m</math>-Talk Euler Equation</b>	<b>23</b>
3.1 General Statement	23
3.2 The Consumption CAPM	24
3.3 Finding $m$ Using a Perturbation	25
<b>4 Expected Risk Premiums and Alphas</b>	<b>27</b>
4.1 General Statement	27
4.2 The SDF Alphas and Abnormal Returns	28
4.3 Relation to Beta-Pricing: The Maximum Correlation Portfolio	29
4.4 Applications of Alpha	29
4.5 Volatility Risk Premiums	30

<b>5</b>	<b>So Many Models, So Little Time</b>	<b>33</b>
5.1	Polynomials in Consumption or Wealth	33
5.2	Habits and Durability	36
5.3	State Nonseparability	38
5.4	Heterogeneity	40
5.5	General Affine Models	41
5.6	Ambiguity Aversion and Knightian Uncertainty	41
5.7	Behavioral SDFs	42
5.8	Multigood Models	43
5.9	Representation Using Future Consumption and Returns	44
<b>6</b>	<b>Applications of <math>m</math>-Talk</b>	<b>45</b>
6.1	Real Interest Rates	45
6.2	Term Structure	47
6.3	Real and Nominal $m$ -Talk	49
6.4	International $m$ -Talk	50
6.5	Conditional Asset Pricing	53
6.6	Market Efficiency	54
6.7	Investment Performance Evaluation	55
<b>7</b>	<b>Three Paradigms of Empirical Asset Pricing</b>	<b>57</b>
7.1	Minimum Variance Efficiency	57
7.2	Beta Pricing	58
7.3	Relation among the Three Paradigms	58
<b>II</b>	<b>MEAN VARIANCE MODELS</b>	
<b>8</b>	<b>Mean Variance Analysis</b>	<b>65</b>
8.1	Deriving the Minimum Variance Frontier: The Classics	65
8.2	The Minimum Variance Boundary	66
8.3	The Hansen and Richard Representation	72
8.4	Generalizations, Extensions, and Evidence	73
<b>9</b>	<b>Mean Variance Efficiency with Conditioning Information</b>	<b>79</b>
9.1	Conditional and Unconditional Efficiency with Information	79
9.2	Relation to Utility Maximization	83
9.3	Explicit UE Solutions	83
9.4	Extensions	88
9.5	Empirical Evidence	89

<b>10</b>	<b>Variance Bounds</b>	95
10.1	A Simple Development	95
10.2	Duality with the Usual Mean-Variance Diagram	96
10.3	Computing the HJ Bounds	99
10.4	Drawing Inferences with HJ Bounds	100
10.5	Related Measures and Bounds	100
<b>11</b>	<b>Variance Bounds with Conditioning Information</b>	107
11.1	Refining HJ Bounds with Conditioning Information	107
11.2	Empirical Application	110
11.3	Sampling Performance	114
11.4	Practical Summary	118
<b>III</b>	<b>MULTIBETA PRICING</b>	
<b>12</b>	<b>Arbitrage Pricing and Factor Analysis</b>	123
12.1	Overview	123
12.2	Limits to Arbitrage and Costly Arbitrage	128
12.3	Factor Analysis	130
<b>13</b>	<b>Multibeta Equilibrium Models</b>	137
13.1	Multiperiod Consumption-Investment Problems	137
13.2	The Classical Multibeta Model	139
<b>14</b>	<b>Multibeta Models with Conditioning Information</b>	145
14.1	Conditional and Unconditional Multifactor Efficiency	145
14.2	The Three Paradigms of Empirical Asset Pricing, Revisited	149
<b>IV</b>	<b>EMPIRICAL ASSET PRICING TOOLS</b>	
<b>15</b>	<b>Introduction to the Generalized Method of Moments</b>	157
15.1	Motivation and General Setup	157
15.2	Simple Examples	159
<b>16</b>	<b>GMM Implementation</b>	163
16.1	Overview	163
16.2	Exactly Identified Models	164
16.3	Linear Models	165
16.4	Nonlinear, Overidentified Models	165
16.5	One Step, Two Steps, $N$ Steps, or More ...	166
16.6	Search Problems	167
16.7	The Asymptotic Covariance Matrix: A First Cut	168

<b>17</b>	<b>Covariance Matrices for the GMM</b>	<b>169</b>
17.1	Autocorrelated Moment Conditions	169
17.2	Optimal Weighting Matrices for Autocorrelated Moment Conditions	174
17.3	A Catalog of Consistent Covariance Matrices	175
17.4	Alternative Non-optimal Weighting Matrices	176
17.5	Asymptotic Variance for GMM When Non-optimal Weighting Matrices Are Used	176
<b>18</b>	<b>GMM Tests</b>	<b>179</b>
18.1	An Aside on Chi-Square Variables	179
18.2	Hansen's J-Statistic	179
18.3	Asymptotic Wald Tests and the Delta Method	180
18.4	Hypotheses about Pricing Errors	181
18.5	Conditional Moment Encompassing Tests	182
18.6	Other Tests	183
<b>19</b>	<b>Advanced GMM</b>	<b>185</b>
19.1	Scaling Factors in GMM	185
19.2	Optimal Instrument Choice	186
19.3	Weak Instruments	188
19.4	Missing Data	189
19.5	Simulated Method of Moments	189
19.6	Testing Inequality Restrictions	190
<b>20</b>	<b>GMM Examples</b>	<b>193</b>
20.1	Examples Illustrating the Generality of the GMM	193
20.2	Formulating Asset Pricing Models with GMM	195
<b>21</b>	<b>Multivariate Regression Methods</b>	<b>205</b>
21.1	Regression Model Restrictions	205
21.2	Testing Portfolio Efficiency in the Multivariate Regression Model	208
21.3	Economic Interpretation	211
21.4	Some Results from Gibbons, Ross, and Shanken	214
21.5	MacKinlay's Power Analysis and the Fama-French Factors	215
21.6	Finite-Sample Results	217
<b>22</b>	<b>Cross-Sectional Regression</b>	<b>219</b>
22.1	CSR Tests	219
22.2	Everything, Including CSR, Is a Special Case of GMM	224
22.3	Testing Unconditional Models with CSR Methods	224
22.4	Errors in the Betas	228
22.5	Asymptotic Distributions for CSR Coefficients	230

22.6	Conditional Asset Pricing with CSR	230
22.7	CSR versus Spread Portfolios	231
<b>23</b>	<b>Introduction to Panel Methods</b>	<b>233</b>
23.1	Concepts and Terminology	233
23.2	Firm Effects and Time Effects	234
23.3	Standard Errors and Clustering	235
23.4	Panels in GMM	237
23.5	How Dummy Variables Work in Panels	239
23.6	Predictive Panel Regressions	243
23.7	Random Firm Effects and Efficient Estimation	248
23.8	Some Results from Petersen (2009)	249
23.9	Differences in Differences	250
23.10	Regression Discontinuity	254
<b>24</b>	<b>Bootstrapping Methods and Multiple Comparisons</b>	<b>257</b>
24.1	Bootstrap 101	257
24.2	Multiple Comparisons	261
24.3	Bootstrap 201: Inferences in Cross Sections	266
<b>V</b>	<b>INVESTMENT PERFORMANCE EVALUATION</b>	
<b>25</b>	<b>Classical Investment Performance Evaluation</b>	<b>275</b>
25.1	The Classical Performance Measures	275
25.2	Properties of the Classical Measures	284
25.3	The Evidence for Professionally Managed Portfolios Using Classical Measures	288
<b>26</b>	<b>Conditional Performance Evaluation</b>	<b>297</b>
26.1	Overview	297
26.2	Motivating Example	298
26.3	Conditional Alphas and Betas	299
26.4	Conditional Market Timing	300
26.5	Conditional Weight-Based Measures	302
26.6	Interpreting Conditional Performance Evidence	303
26.7	Conditional Market Timing Evidence	303
26.8	Conditional Weight-Based Evidence	304
26.9	Volatility Timing Evidence	304
<b>27</b>	<b>Term Structure and Bond Fund Performance</b>	<b>305</b>
27.1	Background	305
27.2	Term Structure Model Stochastic Discount Factors	306
27.3	Single-Factor Model Example	308

27.4	Addressing Interim Trading Bias	309
27.5	Empirical Findings	311
<b>28</b>	<b>Investment Performance Evaluation: A Modern Perspective</b>	<b>315</b>
28.1	Market Efficiency and Fund Performance	316
28.2	Troubles with Traditional Alphas	316
28.3	SDF Alphas and Managers' Information	317
28.4	The Appropriate Benchmark	318
28.5	Mean Variance Efficient Benchmarks Are Almost Never Appropriate Benchmarks	319
28.6	Justifying the Sharpe Ratio	320
28.7	Comments on Holdings-Based Performance Measures	321
28.8	An Example of Holdings-Based Performance with Risk Adjustment	322
28.9	Summary	323
<b>VI</b>	<b>SELECTED TOPICS</b>	
<b>29</b>	<b>Production-Based Asset Pricing</b>	<b>327</b>
29.1	Setup and Goals	327
29.2	Physical Investment with Capital Adjustment Costs	329
29.3	Investment Returns	330
29.4	Stock Returns and Investment Returns	331
29.5	True Production-Based Asset Pricing	332
29.6	Empirical Evidence	333
<b>30</b>	<b>The Campbell-Shiller Approximation and Vector Autoregressions</b>	<b>337</b>
30.1	The Campbell-Shiller Approximation	337
30.2	Return and Dividend Growth Predictability	339
30.3	Vector Autoregressions	340
30.4	VARs Meet Campbell-Shiller Approximations	341
30.5	Examples	342
<b>31</b>	<b>Long-Run Risk Models</b>	<b>345</b>
31.1	A Stationary Model	346
31.2	Interpreting the Model	346
31.3	A Cointegrated Model	348
31.4	Extensions	349
<b>32</b>	<b>Predictability: An Overview</b>	<b>353</b>
32.1	Predicting the Levels of Returns	354
32.2	Predicting Variances: Volatility Modeling	366
32.3	Predicting Covariances, Correlations, and Higher Moments	375

32.4	Predicting Cross-Sectional Differences in Returns	378
32.5	Behavioral Perspective	383
32.6	Concluding Remarks	384
<b>33</b>	<b>Characteristics versus Covariances</b>	<b>385</b>
33.1	The Issue	385
33.2	A Quick Survey of the Evidence	386
33.3	Interpretation	387
<b>34</b>	<b>Volatility and the Cross Section of Stock Returns</b>	<b>391</b>
34.1	Overview	391
34.2	Time Series Evidence	393
34.3	Cross-Sectional Evidence	394
34.4	Explaining a Return-Idiosyncratic Volatility Relation That Is Negative	395
34.5	Common Factors in Idiosyncratic Volatility	397
	Appendix	399
A.1	Eigenvectors ( $x$ ) and Eigenvalues ( $\lambda$ ) for Square Symmetric $n \times n$ Matrices $A$	399
A.2	Direct Sums	400
A.3	Gauss Code for the Generalized Method of Moments	400
A.4	Matlab Code for the Generalized Method of Moments Contributed by Davidson Heath	410
	References	417
	Index	451
