Contents

Motivation	4
Urban Resource Exploration – Producing Structures in Closed-Loop Materials Cycles	6
Part A Strategies and Potential	
1 Circularity in Architecture – Urban Mining Design	10
2 Dismantling, Recovery and Disposal in Construction	16
3 An Overview of Rating Systems	24
4 Using BIM to Optimise Materials Cycles in Construction	32
5 An Elastic Standard – Urban Mining and Computational Design	34
6 Eco-Efficient Construction Using Local Resources	36
Part B Construction and Materials	
1 Detachable Connections and Constructions	42
2 The Recycling Potential of Building Materials	58
3 Mono-Material Construction	102
4 Can Loop Potential Be Measured? An Analysis Using Facade and Roof Coverings as Examples	108
5 Assessment of Loop Potential	114
6 Challenges in the Structural Design of Dismantling- and Recycling-Friendly Constructions	118
7 Cost Comparisons of Conventional and Urban Mining Design Constructions	120
Part C Detailed Catalogue	
Overview of Examples 01 to 09	135
Part D Completed Examples	
Overview of Examples 01 to 21	179
Appendix	
Authors	214
Project Participants	215
Glossary	216
Picture Credits	220
Subject Matter Sponsors	222
