
Hans Peters

Game Theory

A Multi-Levelled Approach

Second Edition

 Springer

Contents

1	Introduction	1
1.1	A Definition	1
1.2	Some History	1
1.3	Examples	3
1.3.1	Zero-Sum Games.....	3
1.3.2	Nonzero-Sum Games	6
1.3.3	Extensive Form Games	8
1.3.4	Cooperative Games	12
1.3.5	Bargaining Games.....	16
1.4	Cooperative Versus Noncooperative Game Theory	17
1.5	Problems	17
1.6	Notes.....	19
	References.....	20
 Part I Thinking Strategically		
2	Finite Two-Person Zero-Sum Games	25
2.1	Basic Definitions and Theory	25
2.2	Solving $2 \times n$ Games and $m \times 2$ Games	28
2.2.1	$2 \times n$ Games	28
2.2.2	$m \times 2$ Games	30
2.2.3	Strict Domination	31
2.3	Problems	33
2.4	Notes.....	35
	Reference	35
3	Finite Two-Person Games	37
3.1	Basic Definitions and Theory	37
3.2	Finding Nash Equilibria	39
3.2.1	Pure Nash Equilibria	40
3.2.2	2×2 Games	41
3.2.3	Strict Domination	42

3.3	Problems	44
3.4	Notes.....	49
	References.....	49
4	Finite Extensive Form Games	51
4.1	The Extensive Form.....	52
4.2	The Strategic Form.....	54
4.3	Backward Induction and Subgame Perfection.....	56
4.4	Perfect Bayesian Equilibrium	60
4.5	Problems	63
4.6	Notes.....	69
	References.....	69
5	Finite Games with Incomplete Information	71
5.1	Player Types.....	72
5.2	Static Games of Incomplete Information	72
5.2.1	Battle-of-the-Sexes with One-Sided Incomplete Information	73
5.2.2	Battle-of-the-Sexes with Two-Sided Incomplete Information	75
5.3	Signaling Games.....	78
5.3.1	An Example	78
5.3.2	Computing Perfect Bayesian Equilibria in the Extensive Form	81
5.3.3	The Intuitive Criterion	81
5.3.4	Another Example.....	82
5.4	Problems	83
5.5	Notes.....	88
	References.....	88
6	Noncooperative Games: Extensions	89
6.1	General Framework: Strategic Games	90
6.2	Cournot Quantity Competition	91
6.2.1	Simple Version with Complete Information	91
6.2.2	Simple Version with Incomplete Information.....	93
6.3	Bertrand Price Competition	95
6.4	Stackelberg Equilibrium	98
6.5	Auctions	99
6.5.1	Complete Information.....	100
6.5.2	Incomplete Information	101
6.5.3	Incomplete Information: A Double Auction	102
6.6	Mixed Strategies and Incomplete Information	103
6.7	Sequential Bargaining	105
6.7.1	Finite Horizon Bargaining	106
6.7.2	Infinite Horizon Bargaining.....	108

6.8	Problems	110
6.9	Notes.....	119
	References.....	120
7	Repeated Games	121
7.1	Subgame Perfect Equilibrium	121
	7.1.1 The Prisoners' Dilemma	121
	7.1.2 Some General Observations	126
	7.1.3 Another Example.....	128
7.2	Nash Equilibrium	130
	7.2.1 An Example	130
	7.2.2 A Folk Theorem for Nash Equilibrium	132
	7.2.3 Another Example	133
7.3	Problems	135
7.4	Notes.....	138
	References.....	138
8	An Introduction to Evolutionary Games	139
8.1	Symmetric Two-Player Games and Evolutionary Stable Strategies	139
8.2	Replicator Dynamics and Evolutionary Stability.....	142
8.3	Asymmetric Games	145
8.4	Problems	147
8.5	Notes.....	149
	References.....	150
9	Cooperative Games with Transferable Utility	151
9.1	Examples and Preliminaries	151
9.2	The Core.....	153
9.3	The Shapley Value	156
9.4	The Nucleolus.....	159
9.5	Problems	165
9.6	Notes.....	169
	References.....	169
10	Cooperative Game Models	171
10.1	Bargaining Problems.....	171
	10.1.1 The Nash Bargaining Solution.....	172
	10.1.2 Relation with the Rubinstein Bargaining Procedure.....	176
10.2	Exchange Economies	178
10.3	Matching Problems	182
10.4	House Exchange	185
10.5	Problems	186
10.6	Notes.....	190
	References.....	191

11 Social Choice	193
11.1 Introduction and Preliminaries	193
11.1.1 An Example	193
11.1.2 Preliminaries	195
11.2 Arrow's Theorem	196
11.3 The Gibbard-Satterthwaite Theorem	199
11.4 Problems	201
11.5 Notes	202
References	203
 Part II Noncooperative Games	
12 Matrix Games	207
12.1 The Minimax Theorem	207
12.2 A Linear Programming Formulation	209
12.3 Problems	211
12.4 Notes	213
References	213
13 Finite Games	215
13.1 Existence of Nash Equilibrium	215
13.2 Bimatrix Games	217
13.2.1 Pure and Mixed Strategies in Nash Equilibrium	217
13.2.2 Extension of the Graphical Method	219
13.2.3 A Mathematical Programming Approach	221
13.2.4 Matrix Games	222
13.2.5 The Game of Chess: Zermelo's Theorem	223
13.3 Iterated Dominance and Best Reply	224
13.4 Perfect Equilibrium	227
13.5 Proper Equilibrium	233
13.6 Strictly Perfect Equilibrium	235
13.7 Correlated Equilibrium	236
13.8 A Characterization of Nash Equilibrium	240
13.9 Problems	243
13.10 Notes	248
References	249
14 Extensive Form Games	251
14.1 Extensive Form Structures and Games	251
14.2 Pure, Mixed and Behavioral Strategies	253
14.3 Nash Equilibrium and Refinements	256
14.3.1 Subgame Perfect Equilibrium	258
14.3.2 Perfect Bayesian and Sequential Equilibrium	259
14.4 Problems	266
14.5 Notes	270
References	271

15	Evolutionary Games	273
15.1	Symmetric Two-Player Games	273
15.1.1	Symmetric 2×2 -Games	274
15.2	Evolutionary Stability	274
15.2.1	Evolutionary Stable Strategies	274
15.2.2	The Structure of the Set $ESS(A)$	276
15.2.3	Relations with Other Refinements	276
15.2.4	Other Characterizations of ESS	276
15.3	Replicator Dynamics and ESS	279
15.3.1	Replicator Dynamics	279
15.3.2	Symmetric 2×2 Games	280
15.3.3	Dominated Strategies	281
15.3.4	Nash Equilibrium Strategies	282
15.3.5	Perfect Equilibrium Strategies	283
15.4	Problems	285
15.5	Notes	287
	References	288
Part III Cooperative Games		
16	TU-Games: Domination, Stable Sets, and the Core	291
16.1	Imputations and Domination	291
16.2	The Core and the Domination-Core	293
16.3	Simple Games	295
16.4	Stable Sets	296
16.5	Balanced Games and the Core	298
16.6	Problems	300
16.7	Notes	302
	References	302
17	The Shapley Value	305
17.1	Definition and Shapley's Characterization	305
17.2	Other Characterizations	311
17.2.1	Dividends	311
17.2.2	Strong Monotonicity	312
17.2.3	Multilinear Extension	313
17.3	Potential and Reduced Game	315
17.3.1	The Potential Approach to the Shapley Value	315
17.3.2	Reduced Games	318
17.4	Problems	323
17.5	Notes	324
	References	325
18	Core, Shapley Value, and Weber Set	327
18.1	The Weber Set	327
18.2	Convex Games	329

18.3	Random Order Values	331
18.4	Weighted Shapley Values	337
18.5	Problems	340
18.6	Notes.....	341
	References.....	342
19	The Nucleolus	343
19.1	An Example	343
19.2	The Lexicographic Order	345
19.3	The (Pre-)Nucleolus	345
19.4	The Kohlberg Criterion	347
19.5	Computation of the Nucleolus.....	350
19.6	A Characterization of the Pre-nucleolus	353
19.7	Problems	355
19.8	Notes.....	358
	References.....	358
20	Special Transferable Utility Games	361
20.1	Assignment and Permutation Games	361
20.2	Flow Games	365
20.3	Voting Games: The Banzhaf Value.....	367
20.4	Problems	370
20.5	Notes.....	372
	References.....	373
21	Bargaining Problems	375
21.1	The Bargaining Problem.....	375
21.2	The Raiffa–Kalai–Smorodinsky Solution.....	377
21.3	The Egalitarian Solution	379
21.4	Noncooperative Bargaining	381
21.5	Games with Nontransferable Utility	382
21.6	Problems	382
21.7	Notes.....	385
	References.....	385
 Part IV Tools, Hints and Solutions		
22	Tools	389
22.1	Some Definitions.....	389
22.2	A Separation Theorem.....	390
22.3	Lemmas of the Alternative	391
22.4	The Duality Theorem of Linear Programming	393
22.5	Some Fixed Point Theorems	394
22.6	The Birkhoff–von Neumann Theorem	395
22.7	The Max-Flow Min-Cut Theorem	397

22.8	Problems	401
22.9	Notes	401
	References	402
23	Review Problems for Part I	403
	References	423
24	Hints, Answers and Solutions	425
	Reference	483
	References	485
	Index	491
