Principles of Mathematical Economics

Contents

i	Household Expenditure					
	1.1	Consumer's Expenditure and Budget Constraint	1			
		1.1.1 A Simple Two-Commodity Model	5			
	1.2	Exercises	9			
	Appendix A: A Short Note on Sigma Notation					
2	Variables, a Short Taxonomy					
	2.1	Exercises	23			
3	Sets and Functions					
	3.1	Sets and Set Presentation	25			
	3.2	Set Inclusion and Set Relationships	27			
	3.3	Set Operations	28			
	3.4	Cartesian Product	-31			
	3.5	Relation, Correspondence, and Function	- 35			
	3.6	Forms of Univariate and Bivariate Functions				
	3.7	Exercises	44			
4	Market Equilibrium Model					
	4.1	Market Demand and Aggregation Problem	47			
		4.1.1 Market Supply,	53			
	4.2	Market Equilibrium.	55			
		4.2.1 Another Look at Single Commodity Linear				
		Demand and Supply Model	58			
		4.2.2 Two-Commodity Market Model	63			
	4.3	US Economic Crisis and Return of Keynesian Economics	65			
		4.3.1 Macroeconomic Model and Equilibrium				
		in National Income	66			
	4.4	Exercises	71			
5	Rate	s of Change and the Derivative	77			
-	5.1	Linear Functions.	77			
		5.1.1 Rate of Change of Non-Linear Functions	79			
	5.2	Limits. Continuity, and Differentiability	83			

		5.2.1	Limits	83
		5.2.2	Continuity	85
		5.2.3	Differentiability	86
	5.3	Rules o	of Differentiation.	87
	5.4	Exercis	ses	- 98
	5.5	Optimi	zation: Determining the Maximum and/or Minimum	
		of a Fu	metion	101
		5.5.1	Constraint Optimization.	111
	5.6	Exercis	ses	112
	5.7	Partial	Derivatives and Extreme Values	
		of Biva	ariate Functions.	113
		5.7.1	Higher Order Partial Derivatives	115
		5.7.2	Maximum and Minimum of a Bivariate Function	117
	5.8	Exercis	ses	121
6	Optin	mal Lev	el of Output and Long Run Price	123
	6.1	Golden	Rule of Profit Maximization	123
		6.1.1	Firms with Quadratic Cost Functions	
			in a Competitive Market	126
		6.1.2	Economically Legitimate Quadratic Cost	
			Functions	127
		6.1.3	Quadratic Cost Function and Firm's	
			Break-Even Point	131
		6.1.4	Quadratic Cost Function and Long-Run	
			Price and Output	135
	6.2	Firms 7	with Cubic Cost Functions in Competitive Industry	140
		6.2.1	Restrictions on Coefficients of a Cubic	
			Cost Function.	141
		6.2.2	Profit Maximization with Cubic Cost Functions:	
			Additional Restrictions	144
		6.2.3	Cubic Cost Function and Break-Even Points	145
		6.2.4	Cubic Cost Functions and Market Equilibrium	
			Price and Firm's Output in the Long Run	146
	6.3	Profit	Maximization in a Non-Competitive Market	148
	6.4	Long I	Run Price-Output Combination for a Monopolistically	
		Compe	etitive Firm	152
	6.5	Short-I	Run Production Function and Profit Maximization	
		for a N	Noncompetitive Firm	155
	6.6	Constr	aint Optimization.	157
	6.7	Elastic	ity of Demand and Supply	158
		6.7.1	Elasticity of a Function	158
		6.7.2	Elasticity of Demand and Supply	160

		6.7.3 Price Elasticity of Demand and a Firm's Total			
		Revenue	164		
	6.8	Exercises	167		
	Appe	ndix A: Linear Demand Function and Marginal Revenue	176		
	Appendix B: Finding Roots of Third and Higher Degree				
		Polynomials and Other Nonlinear Equations	179		
7	Nonl	inear Models	193		
	7.1	Nonlinear Supply and Demand Models	194		
	7.2	Linear Approximation of the Model (Linearization)	198		
	7.3	Linear and Quadratic Approximation Using Taylor Series	199		
		7.3.1 Long Run Competitive Market Equilibrium Price	202		
		7.3.2 Terms of Trade	205		
		7.3.3 Joint Production	206		
		7.3.4 Nonlinear Demand and Optimal Price and Output	200		
		for a Noncompetitive Firm	209		
		7.3.5 Optimal Price and Output for a Multi-Plant firm	214		
	7.4	7.3.6 Nonlinear National Income Model	210		
	7.4	Exercises	219		
8	Addi	tional Topics in Perfect and Imperfect Competition	225		
	8.1	Competitive Firms and Market Supply Functions	225		
	8.2	From Firm to Industry: A Comprehensive Firm and Market			
		Equilibrium Model for Competitive Market	227		
		8.2.1 Aggregation and Related Problems	231		
	8.3	Urge to Merge	239		
	8.4	Deriving the Trace of Optimal Output	244		
	0.5	tor a Noncompetitive Firm	244		
	8.5	Nonlinear Demand Function and the Shutdown Price	251		
	8.0	Exercises	250		
9	Loga	rithmic and Exponential Functions	273		
	9.1	Logarithm	273		
		9.1.1 Change of Base Rule	278		
		9.1.2 Characteristic and Mantissa	278		
	9.2	Logarithmic Functions.	278		
	9.3	Exponential Functions.	279		
	9.4	Derivative of Logarithmic and Exponential functions	290		
	9.5	Economic Application of Derivative of Logarithm	293		
		9.5.1 Exponential Supply and Demand Functions and	202		
		Market Equilibrium	293		

		9.5.2	Profit Maximization for Noncompetitive Firms Facing	
			Semi-Log or Log Linear Demand Functions	301
		9.5.3	Deriving the Trace Function of a Noncompetitive	
			Firm Facing Semi-Log or Log Linear Demand	
			Functions (Optional)	304
	9.6	Exercis	e	309
10	Prod	uction F	unction, Least-Cost Combination of Resources, and	
	Profit	t Maxim	nizing Level of Output	311
	10.1	Produc	tion Function	311
		10.1.1	Isoquants, MRTS, and the Least-Cost Combination of	
			Resources (Type I Optimization)	314
		10.1.2	The Cobb–Douglas Production Function	318
	10.2	The Co	obb-Douglas Production Function	
		and Co	st Minimization (Type I Optimization)	322
	10.3	The Pro	oduction Function, Isocosts and Cost Minimization	
		(Type]	I Optimization)	328
	10.4	Type II	I Optimization Models.	332
	· ·	10.4.1	Substitution Method	332
		10.4.2	The Method of the Lagrange Multiplier	333
	10.5	Produc	tion Function. Cost Function.	
	1010	and Pro	ofit Maximization	336
		10.5.1	Isoquant Meets Isocost Again	336
	10.6	The Co	bb-Douglas Production Function and Profit	550
	10.0	Maxim	ization	338
		1061	Type III Optimization and Restrictions on α and β	338
		10.6.2	An Example of Type III Unconstrained	550
		10.0.2	Maximization	340
