*Thomas Nägele*

# THE LEGAL NATURE OF TOKENS

## UNDER LIECHTENSTEIN'S TVTG

## WITH SPECIAL CONSIDERATION OF THE

## TOKEN-CONTAINER-MODEL

{T}

# Table of contents

Foreword ..... III
Overview of contents ..... V
Table of contents ..... VII
List of Figures ..... XI
Abbreviations ..... XIII
Part 1 Executive summary ..... 1
§ 1 Background ..... 1
§ 2 Subject and purpose ..... 2
Part 2 Introduction ..... 5
§ 1 Terms and selected technologies ..... 5
I The three core technologies behind blockchain technology ..... 5
1 Peer-to-peer network ..... 5
2 Asymmetric encryption ..... 6
3 Hash function ..... 6
II Blockchain – how a chain of blocks is created ..... 8
1 About the terms "blockchain" and "distributed ledger technologies" ..... 8
1.1 Transaction confirmation and the creation of chained blocks ..... 9
1.2 The question of the finality of transactions ..... 10
2 Consensus algorithms ..... 11
2.1 Proof of Work ("PoW") ..... 12
2.2 Proof of Stake ("PoS") ..... 14
§ 2 The development of the first cryptocurrency (Bitcoin) culminating in the TVTG ..... 16
I The origin of cryptocurrencies ..... 16
1 The creation of Bitcoin – the birth of the "blockchain" phenomenon ..... 16
2 The creation of Ethereum – a smart-contract platform for decentralised applications ..... 18
3 The creation of Aeternity – a blockchain protocol that was developed in Liechtenstein ..... 19
II The creation of the Token and TT Service Provider Act ..... 20
Part 3 The legal definition of tokens pursuant to the TVTG ..... 25
§ 1 The creation of a new legal object, the Token ..... 25
§ 2 (1) "Information" ..... 27
A What are information and data in general? ..... 28
I The term data from a technical perspective ..... 28
II The civil law classification of data ..... 29
1 The question of the subjection of data to property law ..... 31
1.1 Introductory remarks on Liechtenstein property law ..... 31
1.2 Subjecting digital data to property law (res digitalis) ..... 33
1.3 Non-subjection to property law ..... 34
2 Classification of data under intellectual property rights ..... 35

3 Application of the Copyright Act to computer programs ... 36
4 Subjection of data to database rights ... 36
III Conclusion on the civil law classification of data ... 37
B The "information" that makes up a token ... 38
I Preliminary remark ... 38
II System tokens (coins) ... 39
1 Bitcoin tokens (bitcoin) ... 39
1.1 Bitcoin blockchain and the transaction model ... 39
1.2 Unspent transaction outputs (UTXO) ... 42
1.3 The information that makes up a bitcoin(-token) ... 43
2 Ethereum tokens (ether) ... 44
2.1 Ethereum Virtual Machine (EVM) ... 44
2.2 The information that makes up an ether (-token) ... 44
3 The creation of system tokens through mining ... 44
III Tokens in the proper sense ... 46
1.1 The creation of tokens through smart-contracts ... 46
1.2 The creation of tokens through minting ... 46
2 The various token standards ... 47
2.1 General information about the token standards based on Ethereum ... 47
2.2 ERC-20 tokens (fungible tokens) ... 47
2.3 ERC-721 tokens (non-fungible tokens) ... 52
2.4 ERC-1400 security tokens (share tokens) ... 53
3 Tokens based on Aeternity ... 54
3.1 Aeternity fungible tokens ... 55
3.2 Aeternity non-fungible tokens ... 55
IV The question of the controllability of data ... 56
V Conclusion on the information that makes up a token ... 56
VI Side note on the token generator pursuant to the TVTG ... 58
§ 3 (2) "On a TT-system" ... 59
A Trustworthy-Technologies (TT) and TT-systems ... 59
I The definitions of TT and TT-systems ... 62
1 The trustworthiness of trustworthy-technologies and TT-systems ... 66
2 What enabled digital transactions without intermediaries? ... 67
2.1 The Byzantine Generals Problem ... 67
2.2 Double spend problem –the ability to copy digital information ... 67
2.3 The CAP theorem and the solution involving the use of consensus algorithms and decentralisation ... 68
2.4 The opportunities for attacks on TT-systems (attack vectors) ... 69
3 The publication of software source codes ("open source") ... 71
II The functional constituent features of the definitions of TT and TT-systems ... 72
1 (1) Integrity of tokens ... 73
2 (2) The clear assignment of tokens to TT-identifiers ... 73
3 (3) Disposal over tokens ... 74
4 (4) TT-systems ... 74
III The transfer of tokens through the disposal over tokens pursuant to Art. 6 TVTG ... 75

1 Art. 6 and disposals over tokens by means of separate transfer regulations 75
2 Transfer in accordance with the rules of the TT-system ... 77
2.1 On-chain transfers ... 77
2.2 Off-chain transfers ... 78
B Conclusion on the definitions of "TT" and "TT-system" ... 82
§ 4 (3) The representation of rights ... 83
A General information about the representation of rights ... 83
I The Token-Container-Model {"TCM"} ... 84
1 Intrinsic tokens – empty containers pursuant to the Token-Container-Model ... 85
2 Are intrinsic tokens a generic or a specific obligation? ... 86
3 Extrinsic tokens – containers "filled" with rights ... 87
II The functions of tokens when representing rights ... 87
1 Art. 8 TVTG – the identification and liberation-function when representing rights ... 87
1.1 The situation regarding intrinsic tokens ... 89
1.2 The situation regarding book-entry securities ... 89
1.3 The situation regarding extrinsic tokens ... 90
III The tokenisation-clause for extrinsic tokens ... 91
IV Interim conclusion on the representation of rights ... 93
B (3a) Claims or rights of membership against a person ... 94
I Representation of claims ... 94
1 The applicability of the identification and liberation-function ... 95
2 Tokenisation using the example of a purchase contract for a watch ... 96
II The representation of rights of membership and book-entry securities ... 97
1 From physical securities to claims and rights of membership to book-entry securities and an electronic register system using TT-systems ... 98
2 The term "book-entry securities" in accordance with Art. 81a SchlT PGR – "functionally equivalent securities in tokenised form" ... 100
3 The transfer of book-entry securities using the example of bearer shares in a joint stock company in the form of tokens ... 103
III Claims and rights of membership in the form of book-entry securities in (security) tokens and their classification under regulatory law ... 104
IV The creation of limited rights in rem of book-entry securities in accordance with with Art. 81a, para. 4 SchlT PGR ... 108
V Conclusion on claims or rights of membership against a person ... 108
C (3b) Rights to property ... 109
I The coordination requirement pursuant to Art. 7, para. 2 TVTG in the case of the representation of rights to property ... 111
II The transfer of ownership through a substitute for the transfer of ownership 113
1 The instruction of ownership pursuant to Art. 503 PL ... 114
1.1 Instruction of ownership in the case of rights represented in tokens ... 117
2 Constructive possession pursuant to Art. 503 PL ... 119
2.1 Constructive possession in the case of rights represented in tokens ... 121
III The problem of competing disposals in the case of the representation of rights to property ... 121

IV The special case of the physical validator ..... 124
V The creation of a right of lien to movable property pursuant to Art. 365 PL, taking account of the principle on the pledging of chattels ..... 125
1 An illustration of the representation of rights to property using examples 127
1.1 Example 1 – Representation of ownership of a watch ..... 127
1.2 Example 2 – Representation of ownership and usufruct rights in tokens to operate a snowboard rental business ..... 131
VI The special case of the representation of rights to real estate ..... 132
VII Conclusion on the representation of rights to property ..... 132
D (3c) Other absolute or relative rights ..... 133
I Intellectual property and protective rights ..... 133
1 The representation of copyrights in tokens ..... 135
2 The representation of usage rights (property rights) to protected works in tokens ..... 136
II Conclusion on other absolute or relative rights ..... 136
§ 5 (4) The assignment to TT-identifiers ..... 137
I Implementation in the TVTG ..... 137
1 Introduction of a separate term for "public key" or "address" ..... 137
II Assignment from a technical perspective and the technology-neutral approach ..... 138
1 Technical implementation with Bitcoin ..... 138
1.1 General information about TT-identifiers with Bitcoin ..... 138
1.2 Pay-to-public key hash (P2PKH) "addresses" ..... 139
1.3 Pay-to-script hash (P2SH) "addresses" ..... 140
2 Technical implementation with Ethereum ..... 142
2.1 The Ethereum addresses that enable allocation to people (externally owned accounts, EOA) ..... 143
2.2 Smart-contract accounts – addresses that identify smart-contracts ..... 144
III Conclusion on the assignment to TT-identifiers ..... 145
Part 4 Conclusion ..... 147
Glossary ..... 155
List of sources and materials ..... 163
Keyword-Index ..... 177
Appendix 1 - Law of 3 October 2019 on Tokens and TT Service Providers (Token and TT Service Provider Act; TVTG) ..... 181

# List of Figures

Figure 1 Claims and rights of membership ..... 97
Figure 2 Representation of ownership of a watch ..... 127
Figure 3 Representation of rights for snowboard rentals ..... 131
Figure 4 Central, Decentralised and Distributed ..... 160
