

Opportunities and Challenges of Data Analytics in IS Research

Marcus Basalla

180287

Doctoral Thesis

University of Liechtenstein

Programme: Doctoral Degree Programme in Business Economics

Module: Doctoral Consortium on Information and Process Management

Supervisor: Prof. Dr. Jan vom Brocke, University of Liechtenstein, Liechtenstein

Co-supervisor: Prof. Dr. Michalis Vlachos, Université de Lausanne, Switzerland

Date of submission: 19/01/23

Table of Contents

Abstract	i
1 Introduction	1
2 Background	3
2.1 Data Science/Data Analytics	3
2.2 Blockchain technology	3
2.3 Deep Learning	4
2.4 Computational Creativity	7
3 Research Design	9
3.1 Crisp-DM framework	9
3.2 Design Science	11
3.3 Process Science	12
3.4 Research Plan	12
4 Publications and Research Summary	15
4.1 Data Analytics to Enhance Existing Processes (Studies A and B).....	16
4.1.1 Study A: On Latency of E-Commerce Platforms.....	16
4.1.2 Study B: Data-Driven Processes for Smart Waste-Collection.....	36
4.2 Energy Efficiency and Environmental Sustainability, Study C: Reuse, Reduce, Support: Design Principles for Green Data Mining. Business & Information Systems Engineering.	63
4.3 Breakthrough Technologies (Studies D and E).....	92
4.3.1 Study D: Blockchain Adoption from an Interorganizational Systems Perspective – A Mixed-Methods Approach.....	92
4.3.2 Study E: Creativity of Deep Learning: Conceptualization and Assessment.....	114
5 Discussion	129
6 Limitations	133
7 Conclusion	133
