

ANDREA DEPLAZES (ED.)  
**CONSTRUCTING ARCHITECTURE**  
**MATERIALS PROCESSES STRUCTURES**

FIFTH, EXTENDED EDITION

Birkhauser  
Basel

## Contents

	<b>How to use this book</b>	
	Preface	10
Introduction	Solid and filigree construction	13
<b>MATERIALS - MODULES</b>	<b>Modules</b>	
Introduction <sup>1</sup>	The importance of the material	19
Properties of materials	The perception of architectural space	20
	The longevity of materials	21
	<b>Masonry</b>	
Introduction	The pathos of masonry	22
Properties of materials	The materials	31
Systems	Masonry terminology	32
	Design and construction	33
	Masonry bonds	35
	Tying and reinforcing double-leaf masonry walls	39
Systems in architecture	The skill of masonry construction	40
	Types of construction	46
	Prefabrication	49
	<b>Concrete</b>	
Introduction	On the metaphysics of exposed concrete	56
Properties of materials	The materials	60
	The concreting process	63
	10 rules for the production of concrete	66
	Exposed concrete surfaces	67
Systems	Floor supports, exposed concrete with internal insulation	69
	The fixing of heavy external cladding (concrete)	70
	The fixing of heavy external cladding (stone)	71
	Chart for establishing preliminary size of reinforced concrete slabs	72
Systems in architecture	Linear structural members	73
	Systems with linear members	74
	Planar structural members	75
	Systems with planar structural members	76
	<b>Timber</b>	
Introduction	Wood: indifferent, synthetic, abstract - plastic	77
Properties of materials	The materials	82
	Wood-based products: Overview	84
	Wood-based products: Layered products	85
	Wood-based products: Particleboards	87
	Wood-based products: Fibreboards	88
	Important panel and prefabricated systems in Switzerland: Overview	89
	Panel construction: Current developments	94
Systems	Timber construction systems: Overview	96
	Platform frame construction: Construction principle	99
	Chart for establishing preliminary size of timber beams	103
Examples	Conversion of a trunk in traditional Japanese timber building culture	104
	The threads of the net	106
	<b>Steel</b>	
Introduction	Why steel?	113
Properties of materials	Sections - forms and applications	120
	Fire protection	122
	Potential applications for structural steelwork	123
Systems	Connections: A selection	124
	Structures - frame with cantilevering beams	126

## Contents

1

Structures - frame with continuous columns	128
Structures - two-way frame	130
Chart for establishing preliminary size of steel beams	132
Systems in architecture Folding and bending	133
Frames	134
Girder, lattice beam and facade	135
Space frames	136
Diamonds and diagonals	137
Canopy structures	138
<hr/> <b>Insulation</b> <hr/>	
introduction The "invisible" building material	139
Properties of materials Transparent thermal insulation	143
Thermal insulation materials and their applications	144
Systems Thermal insulation systems: Overview	146
<hr/> <b>Glass or plastic</b> <hr/>	
introduction Glass - crystalline, amorphous	147
Plastic	150
Properties of materials Glass, the opaque building material	151
Plastic on the threshold of architecture	159
<hr/> <b>ELEMENTS Foundation - Plinth</b> <hr/>	
introduction <sup>1</sup> Building underground	169
Processes Site preparation: Surveying work	177
Site preparation: Earthworks	178
Foundations	179
Systems Foundation schemes: Loadbearing layer inside	180
Foundation schemes: Loadbearing layer outside	181
Systems in architecture The basis for plinths	182
Building performance issues External wall below ground: Influences on the building envelope	185
<hr/> <b>Facade</b> <hr/>	
Introduction The wall	186
Systems in architecture The design of the facade	191
<hr/> <b>Opening</b> <hr/>	
introduction For and against the long horizontal window:	
The Perret - Le Corbusier controversy	200
Systems The window - opening package	209
Position of window, opening rebate forms	210
The window as a component - frame sections	211
The window as a component - glass	212
Window - horizontal section, 1:1	213
Window - vertical section, 1:1	215
Systems in architecture The opening as a hole	217
The opening as a horizontal strip	218
The opening as a joint	219
The opening as a transparent wall	220
Introduction About the door	221
Systems Doors - types of opening	222
Doors - types of door stop	223
Doors - hardware	224
Building performance issues Wall - opening: Influences on the building envelope	225
Cutting out sunlight and glare	226

	<b>Floor</b>	
Introduction	The doubling of the sky	230
	<b>Roof</b>	
Introduction	The roof	236
Systems	Pitched roof: Functions of layers	238
	Flat roof: Functions of layers	239
	Flat roof: Warm deck - conventional systems	240
	Flat roof: Warm deck - special systems	241
	Flat roof: Upside-down roof	242
	Flat roof: Cold deck	243
Systems in architecture	Pitched roof	244
	Flat roof	245
	The roof as a folded plate	246
	Barrel-vault roof and shell roof	247
Building performance issues	Criteria and relationships	248
	Flat roof - pitched roof: Repercussions for the building envelope	249
	<b>Stairs, lifts</b>	
Introduction	Flights of fancy	250
Systems	Excerpt from the <i>Baueingwurstlehre</i> by Ernst Neufert	255
	The geometry of stair transitions	257
	Balustrades and spandrel panels: Extract from Swiss standard SIA 358, 1996 edition	258
	Lifts	259
Systems in architecture	The staircase as an assembly of simply supported beams	263
	The staircase as a monolithic, organic form	264
	The staircase as a space frame	265
	The staircase as a solid timber construction	266
	<b>STRUCTURES</b>	
	<b>Forms of construction</b>	
Introduction <sup>1</sup>	Courtyard house versus veranda house	269
	An attempt to classify horizontal and vertical space development	277
	Structural shell, fitting-out and premium structural shell	288
	Structural issues: The relationship between interior structure, loadbearing structure, and infrastructure	296
Concepts	Vertical loadbearing structures in solid construction: Cross-section concepts	304
	Vertical loadbearing structures in solid construction: Plan concepts	305
	Vaulted loadbearing structures in solid construction: Compression structures	306
Examples	Of heavy mass and apparent heaviness	308
	Ksar Ferich: A fortified storehouse in southern Tunisia	311
	Sculpted architecture: The Scottish tower house	316
Processes	Provision of services during planning work	324
	The sequence of building operations	325
Systems	Compartmentation	326
	Box frame construction	327
	Frame construction	328
	Column-and-slab systems	329
	Single-storey shed forms	330
Systems in architecture	Prefabrication: System building	331
	<b>Building performance, energy</b>	
Introduction	Sustainability: Fundamentals of architecture	335
Concepts	The problem of heat flow and vapour diffusion	339

## Contents

Insulation concepts: Diagram of layers	340
Insulation concepts: Complementary systems - loadbearing layer inside	341
Insulation concepts: Complementary systems - loadbearing layer outside	342
Seven rules for the design of a low-energy house	343
Example Low-tech - high tectonics	344

## **BUILDINGS** **Selected projects**

Examples <sup>1</sup> Apartment blocks, Martinsbergstrasse, Baden: Burkard Meyer Architekten	349
Gallery for Contemporary Art, Marktoberdorf: Bearth + Deplazes	359
Detached family home, Grabs: Peter Markli	368
Paspels School: Valerio Olgiati	378
Volta School, Basel: Miller + Maranta ,	387
Sihlhof School, Zurich: Giuliani Monger	396
Training centre, Gordola: Durisch + Noll	407
New Monte Rosa Hut: Monte Rosa Studio (ETH Zurich), Bearth + Deplazes	414
Vocational Training Centre, Baden: Burkard Meyer Architekten	426
Teacher Training College, Chur: Bearth + Deplazes	434
Swiss School of Engineering for the Wood Industry, Biel: Meili + Peter	443
Private house, Sevgein: Bearth + Deplazes	454
Leutschenbach School, Zurich: Christian Kerez	459
Office building, Picassoplatz, Basel: Peter Markli	469
Preparation of drawings for buildings: Excerpt from Swiss standard SIA 400:2000	479
Presentation on drawings: Example: timber platform frame construction	485
Symbols: Legend for the catalogue of components	487

### **Foundation - Plinth**

Single-leaf masonry	488
Double-leaf masonry, rendered	489
Facing masonry	490
Fair-face concrete with internal insulation	491
External insulation, rendered	492
External cladding, lightweight	493
External cladding, heavyweight	494
Timber platform frame construction	495
Solid timber panel construction: Plinth - Roof	496

### **Wall - Floor**

Single-leaf masonry, rendered	498
Double-leaf masonry, rendered	499
Facing masonry	500
Fair-face concrete with internal insulation	501
External insulation, rendered	502
External cladding, lightweight	503
External cladding, heavyweight	504
Non-loadbearing external wall	505
Timber platform frame construction	506
Solid timber panel construction	507

## Contents

### **Opening**

Windows	Single-leaf masonry	<b>508</b>
	Double-leaf masonry, rendered	510
	Facing masonry	512
	Fair-face concrete with internal insulation	514
	External cladding, lightweight	516
	External cladding, heavyweight	518
	External insulation, rendered	520
	Non-loadbearing external wall	522
	Timber platform frame construction	524
	Solid timber panel construction	526
Doors	Hinged door, external - wood	528
	Hinged door, external - wood/glass	529
	Sliding door, external - metal/glass	530
	Hinged door, internal - wood	531
	Sliding door, internal - wood	532

### **Floor**

	Hollow clay block floor	<b>533</b>
	Hourdis-type hollow clay block floor	534
	Solid concrete slab	535
	Ribbed concrete slab	536
	Concrete waffle slab	537
	Hollow-core concrete slab	538
	Composite slab, profiled metal sheeting-concrete	539
	Solid timber floor	540
	Timber joist floor	541
	Timber box element floor	542
	Steel floor	543

### **Roof - Parapet**

	Pitched roof - warm deck:	
	Fibre-cement - external cladding, lightweight	<b>544</b>
	Pitched roof - warm deck, monopitch roof:	
	Fibre-cement - facing masonry	545
	Pitched roof - cold deck: Roof tiles - masonry in brickwork bond	546
	Pitched roof - cold deck: Sheet metal - single-leaf masonry	547
	Flat roof - warm deck: Bitumen - double-leaf masonry, rendered	548
	Flat roof - warm deck:	
	Bitumen - fair-face concrete with internal insulation	549
	Flat roof - warm deck: Plastics - external cladding, heavyweight	550
	Flat roof - warm deck: Bitumen - non-loadbearing external wall	551
	Flat roof - upside-down roof: Bitumen - external insulation, rendered	552
	Flat roof - cold deck, uncoated roof:	
	Bitumen - timber platform frame construction	553
	Flat roof - warm deck, suitable/unsuitable for foot traffic	554
	Flat roof-cold deck	556
	Flat roof - upside-down roof, with rooftopplanting	558

### **EXTENSION Views on Climate**

	Behavioural studies	<b>563</b>
	The climate zone model	566
	The temperate zones: A conflict of objectives	571
Conclusions	Impact and effort	576

### **APPENDIX**

	Further reading	587
	Picture credits	582
	Index	597
